Chip EMI Suppression Filters (EMIFIL®)

1	Chip Ferrite Beads	BLM Series	23
		BLM_A Series	28
		BLM_B Series	36
		BLM_R Series	49
		BLM_P Series	53
2	GHz Noise Suppression Chip Ferrite Beads	BLM18H Series	61
3	Chip Ferrite Beads Arrays	BLA2AA/BLA2AB/BLA31A/BLA31B Series	66
4	Chip EMIFIL® Capacitor Type	NFM18C/NFM21C/NFM3DC/NFM41C Series	71
5	Chip EMIFIL® Capacitor Array Type	NFA31C Series	75
6	Chip EMIFIL® RC Combined Type	NFR21G Series	76
7	Chip EMIFIL® RC Combined Array Type	NFA31G Series	80
8	Chip EMIFIL® LC Combined Monolithic Type	NFL18ST/NFL21S Series	82
9	Chip EMIFIL® LC Combined Winding Type	NFW31S Series	84
10	Chip EMIFIL® LC Combined Type for Large Current	NFE31P/NFE61P/NFE61H Series	86
11	Chip EMIFIL® for Large Current	NFM_P Series	89
12	Chip EMIGUARD® (EMIFIL® with Varistor Function)	VFM41R Series	93
13	Chip Common Mode Choke Coils Film Type	DLP31S Series	95
14	Chip Common Mode Choke Coils Arrays Film Type	DLP31D Series	96
15	Chip Common Mode Choke Coils Monolithic Type	DLM2HG Series	97
16	Chip Common Mode Choke Coils Winding Type	DLW21S/DLW31S Series	98
17	Chip Common Mode Choke Coils Winding Type for Large Current	DLW5AH/DLW5BS Series	100

Lead Type EMI Suppression Filters (EMIFIL®)

18	Ferrite Beads Inductors	BL01/BL02/BL03 Series	101
19	Disc Type EMIFIL®	DSN6/DSS6 Series	104

20 Disc Type EMIFIL® Broad Type DSN9/DSS9/DST9 Series 107
21 Disc Type EMIFIL® Heavy-duty Type DSN9H/DSS9H/DST9H Series 109
22 Chip EMIGUARD® (EMIFIL® with Varistor Function) VFR3V/VFS6V/VFS9V Series 111
23 Block Type EMIFIL® BNX Series 118
24 Common Mode Choke Coils (for DC Line) PLT09H Series 120

Microwave Absorbers

25 Microwave Absorbers EA10/EA20/EA21 Series 121

● Part Numbering (The structure of the "Global Part Numbers" that have been adopted since June 2001 and the meaning of each code are described herein. If you have any questions about details, inquire at your usual Murata sales office or distributor.)

Chip EMIFIL® Inductor Type

(Global Part Number) **BL M 18 AG 102 S N 1 D**
❶ ❷ ❸ ❹ ❺ ❻ ❼ ❽ ❾

❶Product ID

Product ID	
BL	Chip Ferrite Beads

❷Type

Code	Type
A	Array Type
M	Monolithic Type

❸Dimension (L×W)

Code	Dimension (L×W)	EIA
15	1.0×0.5mm	0402
18	1.6×0.8mm	0603
2A	2.0×1.0mm	0804
21	2.0×1.25mm	0805
31	3.2×1.6mm	1206
41	4.5×1.6mm	1806

❺Impedance

Expressed by three figures. The unit is in ohm (Ω). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures.

❻Performance

Expressed by a letter.

Ex.)

Code	Performance
S	Sn Plating

❼Category

Code	Category
N	Standard Type
H	for Heavy-duty

❽Numbers of Circuit

Code	Numbers of Circuit
1	1 Circuit
4	4 Circuit

❹Characteristics/Applications

Code *1	Characteristics/Applications	Series
AF	for General Use	**BLM31/BLM41**
AG		**BLM15/BLM18/BLM21/BLM31/BLA2A/BLA31**
AJ		**BLM21/BLM31**
AH		**BLM21**
BA	for High-speed Signal Lines	**BLM18**
BB		**BLM15/BLM18/BLM21/BLA2A**
BD		**BLM15/BLM18/BLM21/BLA31**
BE		**BLM31**
PF	for Power Supplies	**BLM41**
PG		**BLM18/BLM21/BLM31/BLM41**
RK	for Digital Interface	**BLM18/BLM21**
HG	for GHz Band General Use	**BLM18**
HB	for GHz Band High-speed Signal Line	**BLM18**
HD		
HK	for GHz Band Digital Interface	**BLM18**

*1 Frequency characteristics is varied with each code.

❾Packaging

Code	Packaging	Series
K	Plastic Taping (ø330mm Reel)	**BLM31/BLM41/BLM21** *1
L	Plastic Taping (ø180mm Reel)	
B	Bulk	All series
J	Paper Taping (ø330mm Reel)	**BLM15/BLM18/BLM21***2 **/BLA31**
D	Paper Taping (ø180mm Reel)	**BLM15/BLM18/BLM21***2 **/BLA2A/BLA31**
C	Bulk Case	**BLM15/BLM18**

*1 BLM21BD222SN1/BLM21BD272SN1 only.
*2 Except BLM21BD222SN1/BLM21BD272SN1

Chip EMIFIL® Capacitor Type

(Global Part Number) **NF** ❶ **M** ❷ **3D** ❸ **CC** ❹ **102** ❺ **R** ❻ **1H** ❼ **3** ❽ **L** ❾

❶Product ID

Product ID	
NF	Chip EMI Filters Capacitor Type

❷Structure

Code	Structure
M	Capacitor Type

❸Dimension (L×W)

Code	Dimension (L×W)	EIA
18	1.6×0.8mm	0603
21	2.0×1.25mm	0805
3D	3.2×1.25mm	1206
41	4.5×1.6mm	1806

❹Features

Code	Features
CC	Capacitor Type for Signal Lines
PC	Capacitor Type for Large Current

❺Capacitance

Expressed by three figures. The unit is in pico-farad (pF). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures.

❻Characteristics

Code	Capacitance Change
B	±10%
F	+30/-80%
R	±15%
U	-750 ±120ppm/°C
S	+350 to -1000ppm/°C

❼Rated Voltage

Code	Rated Voltage
0J	6.3V
1A	10V
1C	16V
1E	25V
1H	50V
2A	100V

❽Electrode/Others

Expressed by a figure.

Ex.)

Code	Electrode
2	Sn Plating
3	Sn Plating
4	Solder Coating
9	Others

❾Packaging

Code	Packaging	Series
L	Plastic Taping (ø180mm Reel)	**NFM3D/NFM41**
B	Bulk	All series
D	Paper Taping (ø180mm Reel)	**NFM18/NFM21**

Chip EMIFIL® Capacitor Array Type

❾Packaging

Code	Packaging
B	Bulk
D	Paper Taping (ø180mm Reel)

Chip EMIFIL® LC Combined Type

(Global Part Number) **NF** ❶ **W** ❷ **31** ❸ **SP** ❹ **206** ❺ **X** ❻ **1E** ❼ **4** ❽ **L** ❾

❶Product ID

Product ID	
NF	Chip EMI Filters LC Combined Type

❷Structure

Code	Structure
L	Monolithic, LC Combined Type
W	Winding, LC Combined Type
E	Block, LC Combined Type

❸Dimension (L×W)

Code	Dimension (L×W)	EIA
18	1.6×0.8mm	0603
21	2.0×1.25mm	0805
31	3.2×1.6mm	1206
61	6.8×1.6mm	2606

❹Features

Code	Features
SP	π Circuit for Signal Lines
ST	T Circuit for Signal Lines
PT	T Circuit for Large Current
HT	T Circuit for Heavy-duty

❺Cut-off Frequency (NFL/NFW Series)

Expressed by three figures. The unit is in hertz (Hz). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures.

❺Capacitance (NFE Series)

Expressed by three figures. The unit is in pico-farad (pF). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures.

❻Characteristics (NFL/NFW Series)

Code	Characteristics
X	Cut off Frequency

❻Characteristics (NFE Series)

Code	Capacitance Change
B	±10%
C	±20%, ±22%
D	+20/-30%, +22/-33%
E	+20/-55%, +22/-56%
F	+30/-80%, +22/-82%
R	±15%
U	-750 ±120ppm/ ˚C
Z	Other

❼Rated Voltage

Code	Rated Voltage
1A	10V
1C	16V
1E	25V
1H	50V
2A	100V

❽Electrode

Expressed by a figure.

Ex.)

Code	Electrode
3	Sn Plating
4	Solder Coating
9	Others

❾Packaging

Code	Packaging	Series
K	Plastic Taping (ø330mm Reel)	**NFW31/NFE**
L	Plastic Taping (ø180mm Reel)	**NFW31/NFE**
B	Bulk	**NFL18/NFL21/NFE**
D	Paper Taping (ø180mm Reel)	**NFL18/NFL21**

Chip EMIFIL® RC Combined Type

❹Features

Code	Features
GD	RC Combined Type for Signal Lines

❺Capacitance

Expressed by three figures. The unit is in pico-farad (pF). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures. If there is a decimal point, it is expressed by capital letter "**R**". In this case, all figures are significant digits.

❻Resistance

Expressed by three figures. The unit is in ohm (Ω). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures. If there is a decimal point, it is expressed by capital letter "**R**". In this case, all figures are significant digits.

10	for AC Line

❹Structure

Code	Structure
A	Core Vertical Type
H	Core Horizontal Type

❺Features

Code	Features
S	Safety Recognized
N	General Use

❻Inductance

Expressed by three figures. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures. If there is a decimal point, it is expressed by capital letter "**R**". In this case, all figures are significant digits. If inductance is less than 0.1 μH, the inductance code is expressed by combination of two figures and capital letter "**N**", and the unit of inductance is nano-henry (nH). Capital letter "**N**" indicates the unit of "nH", and also expresses a decimal point. In this case, all figures are significant digits.

❼Rated Current

Expressed by three figures. The unit is in ampere (A). A decimal point is expressed by capital letter "**R**". In this case, all figures are significant digits.

❽Winding Mode

Code	Winding Mode
D	Sectional Winding Type
R	Standard Type
P	Aligned Winding Type

❺Temperature Characteristics

Code	Capacitance Change
D8	+20/-30% (Temperature Range : -40˚C～+105˚C)
D3	+20/-30% (Temperature Range : -25˚C～+85˚C)

❻Rated Voltage

Code	Rated Voltage
1E	25V
1B	12V

❼Capacitance

Expressed by three figures. The unit is in pico-farad (pF). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures.

❽Lead Type/❾Packaging

Code	Lead Type	Lead Lenght*	Packaging	Series
T51B	Incrimp	25.0mm min.	Bulk	**VFR3/VFS6**
U31A		18.5+/-1.0mm	Ammo Pack	
Q55B	Straight	25.0mm min.	Bulk	**VFS9**
Q91J		20.0+/-1.0mm	Paper Reel (ø320mm)	
Q92J		16.5+/-1.0mm		
Q93J		18.5+/-1.0mm		

*Lead Distance between Reference and Bottom Planes except Bulk.

Microwave Absorber

(Global Part Number) **EA** **1026** **A** **160** **M** **200** **200**
❶ ❷ ❸ ❹ ❺ ❻ ❼

❶Product ID

Product ID	
EA	Microwave Absorber

❷Sheet Type

Code	Sheet Type
10□□	Iron carbonyl type
2070	Metal Flake Powder (non Halogen type)
2100	Metal Flake Powder (UL certified type)

❸Adhesive Tape Type

Code	Adhesive Tape Type
A	Standard tape type
B	Thin Adhesive tape type
L	No tape type
U	UL certified type

❹Sheet Thickness

Expressed by 3 digits including the second decimal place in mm.

Ex.)

Code	Sheet Thickness
020	0.20mm

❺Unit of Dimension

One capital lettler expresses Unit of dimension (❻) and Dimensions Length (❼).

Code	Unit of Dimension
M	in mm (Standard)
C	in cm (Standard)

Standard shape is a rectangle.
Please contact us for other shapes.

❻Dimension (Length)

Expressed by 3 digits including the first decimal place.

❼Dimension (Width)

Expressed by 3 digits including the first decimal place.

Ex.)

Code	Dimension (Length × Width)
M300150	30.0×15.0 mm
C150100	15.0×10.0 cm

- Inductor type EMI suppression filters are effective for frequencies ranging from a few MHz to a few GHz. Inductor type filters are widely used as a low noise countermeasure, as well as a universal noise suppression component.
- The inductor type EMIFIL® produce a micro inductance in the low frequency range. At high frequencies, however, the resistive component of the inductor produces the primary impedance. When inserted in series in the noise producing circuit, the resistive impedance of the inductor prevents noise propagation.

- This capacitor type EMI suppression filter has a large noise suppression effect at frequencies ranging from a few MHz to hundreds of MHz. This type of filter is used widely as a universal, high performance EMI suppression component.
- The chip solid EMIFIL® incorporates a built-in three-terminal capacitor, eliminating the lead wire and thereby increasing the high-frequency performance characteristic.
- The T-type chip EMIFIL® is a chip EMI suppression filter with a built-in feed-thru capacitor. The use of ferrite beads on input and output terminals minimizes resonance with surrounding circuits.
- Whatever the situation, 3-terminal construction reduces residual inductance, thereby substantially improving noise suppression at frequencies over 10MHz.

- High-speed signal application EMIFIL® are high performance EMI suppression filters which increase the slope of insertion loss frequency characteristic curves (shape factor), thereby improving noise and signal separation. These are used for high speed signal applications in which noise and signal frequency approach the same value.
  To avoid the elimination of both the noise and specific signal components, 3-terminal capacitors and other components are applied.
  An NFW31S with a built-in capacitor and an inductor type BLM□□B are available.
  BLM18HD has additional performance for suppressing GHz range noise after cut off frequency.
- The EMIFIL® with waveform distortion suppressing function suppresses waveform distortion caused by the resonance of digital ICs and surrounding circuits.

- These choke coils reduce common mode noise, which causes problems on balanced transmission lines, and are effective against common mode noise in the several MHz to several 100 MHz frequency range.
  They are ideally suited for use on DC power supply lines and interface cables.
- There are two types of chip common mode choke coils: the high-performance wound wire DLW5BS/(AH). They offer particular characteristics to match the specific application.

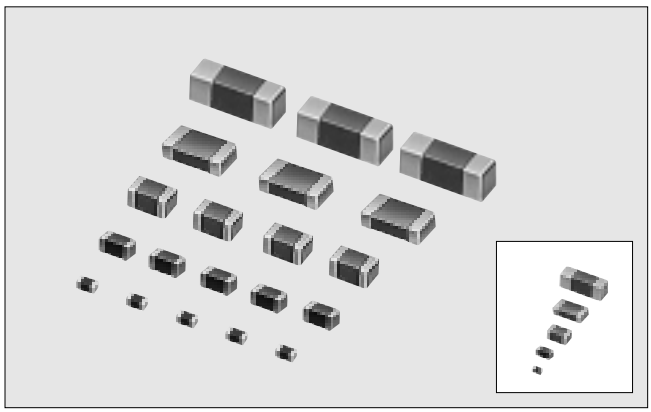
On-Board Type (DC) EMI Suppression Filters(EMIFIL®)

Chip Ferrite Bead **BLM** Series

Essential for Noise Suppression in High Speed Signal Lines and DC Power Lines

The chip ferrite bead BLM series comprises ferrite bead in the shape of a chip. This ferrite bead generates a high impedance which at high frequencies mainly consists of a resistance element. The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground.
Chip sizes of 1.0×0.5, 1.6×0.8, 2.0×1.25, 3.2×1.6 and 4.5×1.6mm are cataloged. (The BLA series of array type chip ferrite bead is also cataloged.)
The nickel barrier structure of the external electrodes provides excellent solder heat resistance.



■Features

The BLM series comprises, the R series (for digital interface), the A series (for standard), the B series (for high speed signal), the P series (for large current), and H series (for GHz Range Noise Suppression).

1. BLM□□R series-For Digital Interface
   The BLM-R series can be used in Digital Interface. Resistance of BLM-R series especially grows in the lower frequency range. Therefore BLM-R series is less effect for digital signal waveform at low frequency range and can suppress the ringing.
2. BLM□□A series-For Standard
   The BLM-A series generates an impedance from the relatively low frequencies. Therefore the BLM-A series is effective in noise suppression in the wide frequency range (30MHz-Several hundred MHz).
3. BLM□□B series-For High Speed Signal
   The BLM-B series can minimize attenuation of the signal waveform due to its sharp impedance characteristics. Various impedances are available to match signal frequency
4. BLM□□P series-For Large Current
   The BLM-P series can be used in high current circuits due to its low DC resistance. It can match power lines to a maximum of 6A DC (BLM41P).
5. BLM18H series-For GHz Range Noise Suppression
   The BLM18H series has a modified internal electrode structure that minimizes stray capacitance and increases the effective frequency range.

■ Features (BLM_B Series)

The chip ferrite bead BLM series comprises ferrite bead in the shape of a chip. This ferrite bead generates a high impedance which at high frequencies mainly consists of a resistance element. The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground.
The nickel barrier structure of the external electrodes provides excellent solder heat resistance.
The BLM_B series can minimize attenuation of the signal waveform due to its sharp impedance characteristics. Various impedances are available to match signal frequency.

■ Features (BLM_R Series)

The chip ferrite bead BLM series comprises ferrite bead in the shape of a chip. This ferrite bead generates a high impedance which at high frequencies mainly consists of a resistance element. The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground.
The nickel barrier structure of the external electrodes provides excellent solder heat resistance.
The BLM_R series can be used in Digital Interface.
Resistance of BLM_R series especiallly grows in the lower frequency range. Therefore BLM_R series is less effect for Digital signal waveform at low frequncy range and can suppress the ringing.

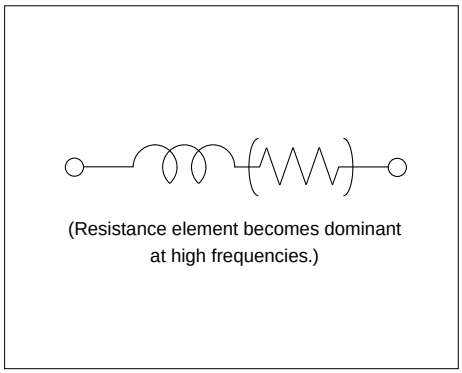
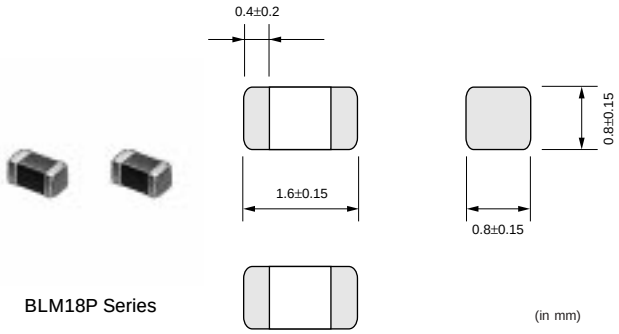
■ Features (BLM_P Series)

The chip ferrite bead BLM series comprises ferrite bead in the shape of a chip. This ferrite bead generates a high impedance which at high frequencies mainly consists of a resistance element. The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground.
The nickel barrier structure of the external electrodes provides excellent solder heat resistance. The BLM_P series can be used in high current circuits due to its low DC resistance. It can match power lines to a maximum of 6A DC (BLM41P).

■ Equivalent Circuit



BLM18P Series (0603 Size)



Part Number	Impedance (at 100MHz, 20 degree C) (ohm)	Rated Current (mA)	DC Resistance (max.) (ohm)	Operating Temperature Range (°C)

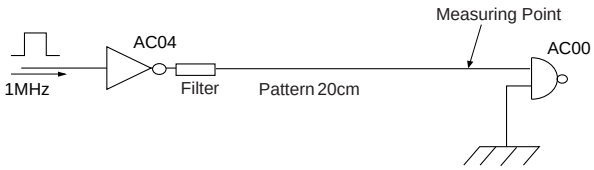
Noise Suppression Effect of BLM_R Series

■Waveform Distortion Suppressing Performance of BLM□□R Series

[Measuring Circuits]



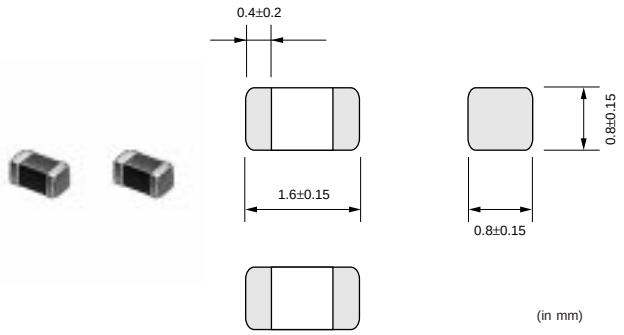
Type of Filter	EMI Suppression Effect / Description
Initial (No filter)	Signal waveform (100nsec/div, 2V/div) / Expand (10nsec/div, 2V/div) / Spectrum  Ringing is caused on the signal waveform Such ringing contains several hundred MHz harmonic components and generates noise.
Resister (47Ω) is used	Signal waveform (100nsec/div, 2V/div) / Expand (10nsec/div, 2V/div) / Spectrum  Comparing initial waveform, ringing is suppresed a little. However there still remains high level waveform distortion.
BLM18RK221SN1 (220Ω at 100MHz) is used	Signal waveform (100nsec/div, 2V/div) / Expand (10nsec/div, 2V/div) / Spectrum  BLM18R has excellent performance for noise suppression and waveform distortion suppression. BLM18R suppresses drastically not only spectrum level in more than 100MHz range but waveform distortion.

On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

muRata

GHz Noise Suppression Chip Ferrite Beads BLM18H Series

The chip ferrite bead BLM18H series comprises ferrite bead in the shape of a chip. This ferrite bead generates a high impedance which at high frequencies mainly consists of a resistance element. The BLM18H series is effective in circuits without stable ground lines because the BLM18H series does not need a connection to ground.
The BLM18H series has a modified internal electrode structure, that minimizes stray capacitance and increases the effective frequency range.



■ Features (BLM18HB/HD/HG Series)

1. The BLM18HG, BLM18HD series is similar to BLM_A/B series at frequency below 100MHz, however at 1GHz the impedance is approx. 3 times larger.
2. The BLM18HG is intended for standard signal lines as this series provides significant impedance across a broad frequency range. The BLM18HB/HD provides a sharper roll-off after the cut off frequency, therefore this series is ideal for high speed signal lines.
3. The magnetic shielded structure minimizes crosstalk.

■ Features (BLM18HK Series)

1. The BLM18HK series is realized high impedance at 1GHz and suitable for noise suppression of digital interfacefrom 500MHz to GHz range.
2. The BLM18HK series is effective in suppressing the ringing because resistance especially grows in the lower frequency.
3. The magnetic shielded structure minimizes cross talk.

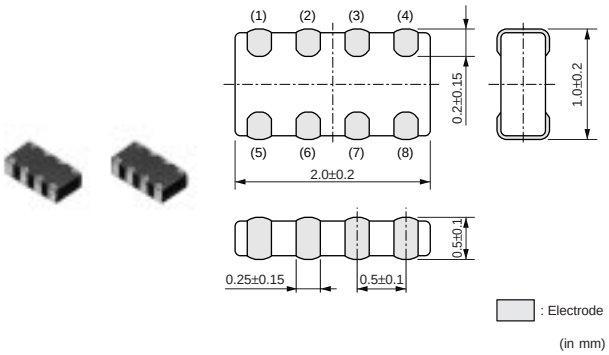
Chip Ferrite Beads Arrays BLA2AA/BLA2AB/BLA31A/BLA31B Series

BLA2AA/BLA2AB Series

The smaller electronic equipment become, the more high performance EMI filters which enables high density mounting requires. BLA2AA/2AB series consists of 4 circuits of ferrite bead.



■ Features

1. BLA2AA/2AB series has 4 circuits in 2.0x1.0mm body with 0.8mm pitch.
2. Provides attenuation across a broad frequency range. Two types of impedance characteristics are available, one is for general signal line and the other is for high speed signal line.
3. Original inner electrode structure enables extra low crosstalk.
4. The nickel barrier structure of the external electrodes provides excellent solder heat resistance.

■ Applications

Notebook size PC, PDA and other compact size digital equipment

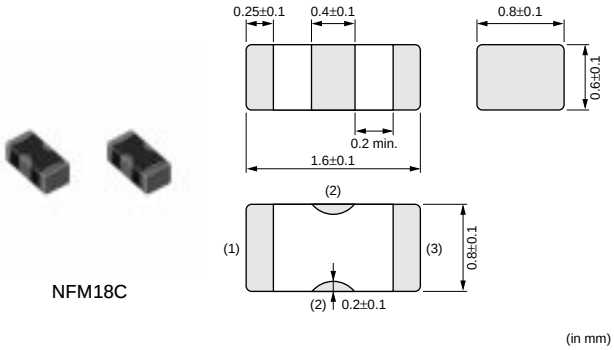
On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

Chip EMIFIL® Capacitor Type NFM18C/NFM21C/NFM3DC/NFM41C Series

NFM18C Series

The NFM18CC series is the EMI suppression filter for signal lines which have 3-terminal structure in 1.6x0.8mm by Murata's multilayer technology.



■ Features

1. Ultra small size in 1.6x8x0.6mm enable high density mounting.
2. 3-terminal structure with low residual inductance (ESL)* characteristics achieved large insertion loss characteristics even in high frequency area.
   * Not exceeding one-tenth of Monolithic ceramic capacitors. (2-terminal)
3. The NFM18CC series cover capacitance range from 22pF up to 22000pF.

■ Applications

1. EMI suppression of circuit for Insertion loss in quantity.
2. Noise suppression up to GHz.

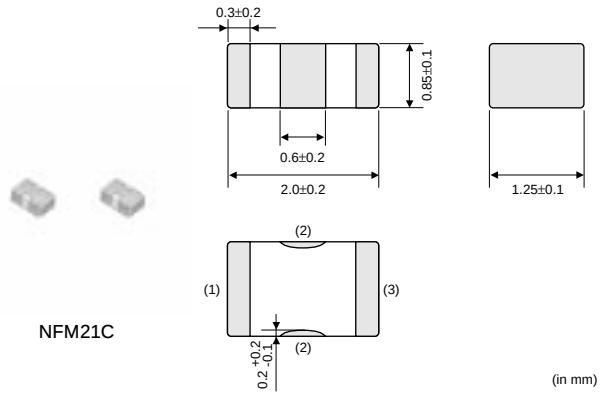
NFM21C Series

The chip "EMIFIL" NFM21C series is a chip type 3-terminal EMI suppression filter. It can reduce residual inductance to an extremely low level making it excellent for noise suppression at high frequencies.



■ Features

1. Small and low profile of 2.0x1.25x0.85mm (NFM21C) enables high density mounting.
2. 3 terminal structure enables high performance in high frequency range.
3. Use original electrode structure which realize excellent solderability.
4. An electrostatic capacitance range of 22 to 22000pF enables suppression of noise at specific frequencies.

■ Applications

1. PCs and peripherals which emit high amount of noise.
2. Compact size equipment such as PDA, PC card and mobile telecommunication equipments.
3. Severe EMI suppression and high impedance circuits such as digital circuits.

On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

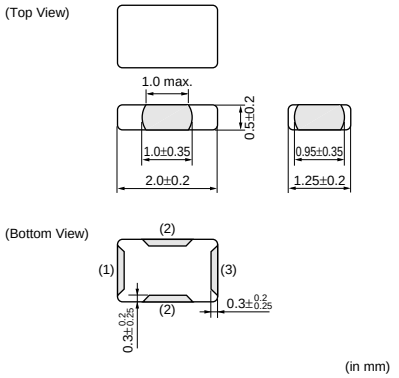
Chip EMIFIL® RC Combined Type NFR21G Series

The NFR21G series comprise high performance EMI suppression filter which can suppress distortion of waveform. Various items are to be used, considering circuit impedance and noise condition.



■ Features

1. Marata's original inner design realized small and low profile of 2.0x1.25x0.5mm.
2. Distributed constant circuit realizes smooth change of impedance which prevents reflection of signal and distortion of wave shape.
3. The NFR21G series is effective in the line where ground is not stable, because the resistance element in the filter absorb noise and return it to ground line.
4. The NFR21G series has no polarity so that it can be used in dual direction transport lines.
5. The NFR21G series has various line up of resistance (22-100ohm) and capacitance (10-100pF).

■ Applications

Interface lines and clock lines where signals are tend to be distorted.

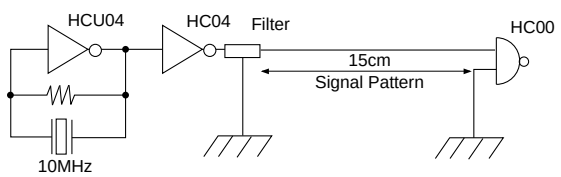
Noise Suppression Effect of NFR21G Series

■Effect of Noise Suppression by NFR21G

The NFR21G is effective even if ground line is not stable enough due to its distribute constant circuit structure.

[Testing Circuit]



6

With Stable Ground Line

Type of Filter	EMI Suppression Effect	Description
Noise Level without Filter		Filter Mounting Condition Standard Type Chip EMIFIL® (100pF)		The standard type chip EMIFIL® is effective on stable ground line.
Filter Mounting Condition **NFR21GD4701012**		The NFR21G has some advantage to standard type EMIFIL® on stable ground line.

With Poor Ground Line

Type of Filter	EMI Suppression Effect	Description
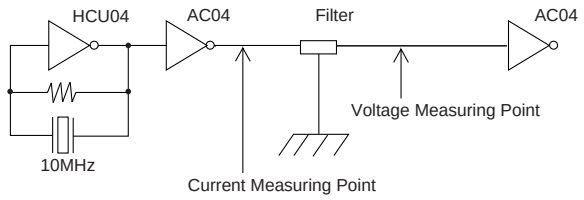
Noise Level without Filter		Filter Mounting Condition Standard Type Chip EMIFIL® (100pF)		The standard type EMIFIL® lose efficiency on poor ground line.
Filter Mounting Condition **NFR21GD4701012**		The NFR21G is effective even on poor ground line because of its distribute constant circuit structure and unique system to limit rush current.

Noise Suppression Effect of NFR21G Series

■Waveform Distortion Suppressing Function by NFR21G

[Testing Circuit]

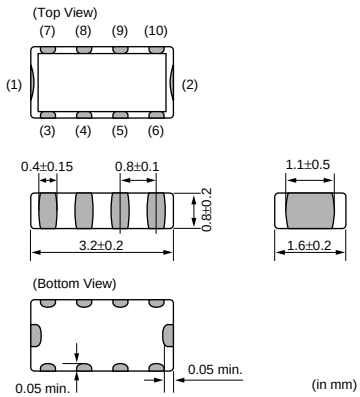


Type of Filter	EMI Suppression Effect	Description
Initial Waveform (no filter)	Voltage Waveform  ↑ :1V/div → :20ns/div Current Waveform  ↑ :2mA/div → :20ns/div	Resonance between the internal capacitance of the IC and the inductance of the print pattern causes waveform overshooting and undershooting.
When Ordinary Capacitor Filter is Used	Output Voltage Waveform  ↑ :1V/div → :20ns/div Input Current Waveform  ↑ :2mA/div → :20ns/div	Ordinary capacitor filters have no waveform distortion suppressing capability, and they cannot suppress disturbances in the waveforms. The current needed to charge and discharge the capacitor raises the peak level of current that flows out of the driver side IC, increasing the load on the IC.
NFR21G	Output Voltage Waveform  ↑ :1V/div → :20ns/div Input Current Waveform  ↑ :2mA/div → :20ns/div	The waveform distortion suppressing function of the NFR21G minimizes disturbances of waveforms. The NFR21G also includes a current limiting function, reducing the load on driver ICs.

On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

Chip EMIFIL® RC Combined Array Type NFA31G Series

NFA31G series is high performance EMI suppression filter array which designed 4 circuits noise filter in 3.2x1.6mm size. NFA31G realizes high density mounting.



■ Features

1. NFA31G has 4 circuits noise filter in 3.2x1.6mm size with 0.8mm pitch. High density mounting is available.
2. 3-terminal structure enables excellent high frequency performance.
3. Distributed constant circuit realizes smooth change of impedance which prevents reflection of signal and distortion of wave shape.
4. NFA31G series is effective in the line where ground is not stable, because the resistance element in the filter absorb noise and return it to ground line.

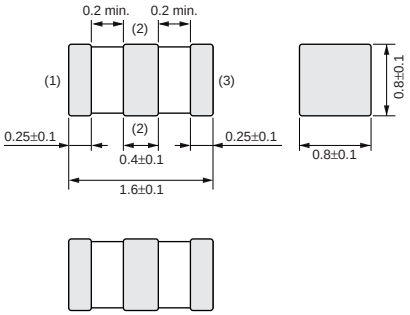
On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

Chip EMIFIL® LC Combined Monolithic Type NFL18ST/NFL21S Series

NFL18ST Series

Ths NFL18ST series is the EMI suppression filter for high speed signal line,achieving T-type structure in 1.6x0.8mm size with Murata's multilayer technology.



(in mm)

8

■ Features

1. Ultra-Small size in 1.6x0.8x0.8mm
2. Steep insertion loss characteristics realize excellent noise suppression and prevent distortion of signal waveform.
3. By minimizing stray capacitance of Inductor, achieved high performance in noise suppression in high frequency range.
4. Five different values of cutoff frequency are available, ranging from 100MHz up to 500MHz.
5. No polarity using the same structure of all the side electrode.

■ Applications

Noise suppression for video signal lines (RGB lines) and high speed clock lines.

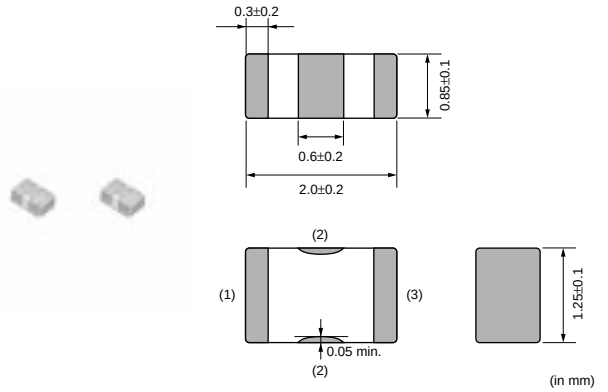
NFL21S Series

The chip "EMIFIL" NFL21S series is high performance EMI suppression filter in 2.0x1.25mm size for high speed signal line by using Murata's processing technology.



■ Features

1. The filters suppress noise with few affection on the signal itself due to its steap filtering characteristics.
2. Murata's original internal structure design enables excellent noise suppression up to high frequencies.
3. The NFL21S series are available in nine different values of cutoff frequency ranging from 20MHz up to 500MHz.

■ Applications

Suppression of high magnitude radiated noise generated by high speed digital circuits such as clock and RGB.

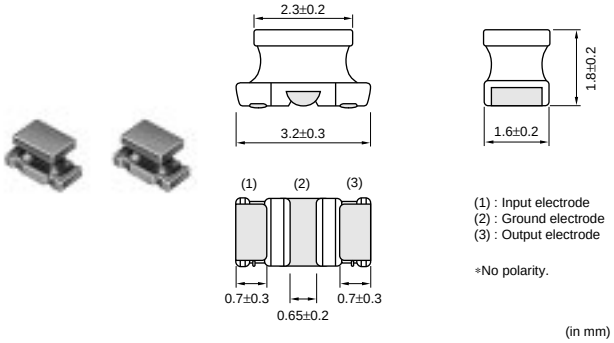
On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

Chip EMIFIL® LC Combined Winding Type NFW31S Series

The signal line chip EMI filter NFW31S series consist of high performance EMI suppression filter. They are designed for noise suppression in high speed signal digital circuits in which the signal harmonics are prone to becoming noise sources. These filters achieve a 100dB/dec. (typ.) damping characteristic with Murata's innovative circuit design. This makes these chips effective in applications where the signal and noise frequencies are close to each other.



9

■ Features

1. The filters suppress signal noise with little or no attenuation of the signal itself.
2. Murata's original internal structure design enables excellent noise suppression up to high frequencies (40dB at 1GHz typ.).
3. The NFW31S series is available in six different values of cutoff frequency ranging from 10MHz up to 500MHz.

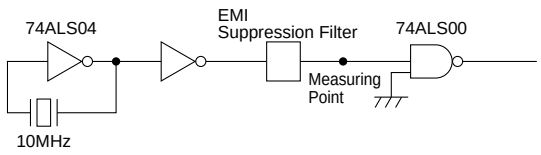
Noise Suppression Effect of NFW31S Series

■Example of EMI Suppression in an Actual Circuit

[Measuring Circuit]



Type of Filter	Signal Wave Form (20ns/div 1v/div)	EMI Suppression Effect	Description
Signal Waveform and Noise Spectrum before Filter Mounting	 Signal Waveform (20ns/div 1V/div)	 Noise Spectrum (10:1 Active Probe)	
NFW31S Series (Cut-off frequency 50MHz)			The NFW31S's steep attenuation characteristic means excellent EMI suppression without waveform cornering.
Conventional Chip Solid type EMI Filter (**NFM41CC** 470pF) 			3-terminal capacitors suppress signal frequencies as EMI frequencies so the signal waveform is distorted.
Filter Combined with Conventional LCs  L : Chip Inductor C : Chip Capacitor (270pF)			Combinations of inductors and capacitors can yield a steep attenuation characteristic, but they require a great deal more mounting space. Moreover, at high frequencies the EMI suppression is less than that obtained by the NFW31S.

Chip EMIFIL® for Large Current NFM_P Series

NFM18P Series

The NFM18P series is the EMI suppression filter for high speed IC power lines which realized large capacitance 1É F max. and rated current 2A in 1608 size by Murata's multilayer technology.

■ Features

1. Ultra-small size in 1.6x0.8mm.
2. 3-terminal structure with low residual (ESL)* and Large capacitance 1 micro F max. realizes large insertion loss characteristics over wide frequency range.
   * Not exceeding one-tenth of Monolithic ceramic capacitors. (2-terminal)
3. Large rated current 2A is suitable for noise suppression of circuit which requires large current.
4. The NFM18P series has line up of capacitance 0.1-1.0 micro F.

■ Applications

1. Noise suppression for large capacitance circuit such as high speed IC power lines.
2. Control change of voltage for high speed IC.

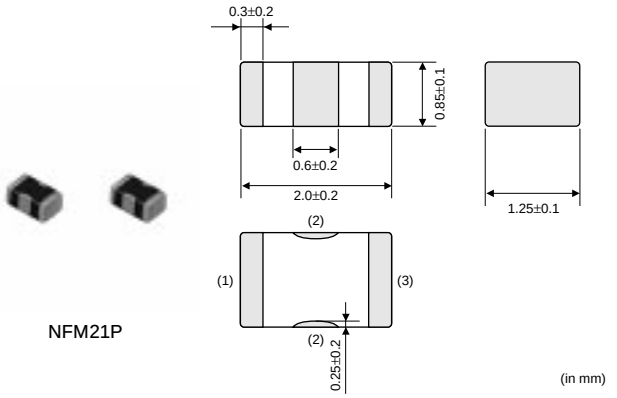
NFM21P Series

NFM21P is 3-terminal structure component. This product can be applied to large current DC power lines. NFM21P is suitable for noise suppression of DC power lines where relatively operates large current.



■ Features

1. The rated current of 4A is suitable for IC's individual power line.
2. Small dimension enables higher density packaging. NFM21P is much smaller size. (2.0x1.25x0.85mm)
3. Murata's original internal electrode structure design which realizes excellent EMI suppression effect from low frequency to high frequency.

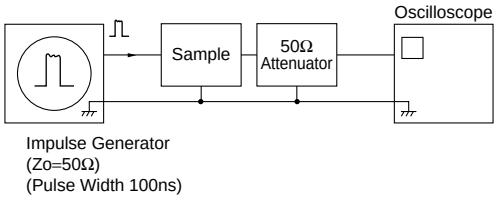
Noise Suppression Effect of VFM Series

■Impulse Noise Absorption

(Comparison between VFM41R and Standard 2-terminal Varistor)

[TESTING CIRCUIT]

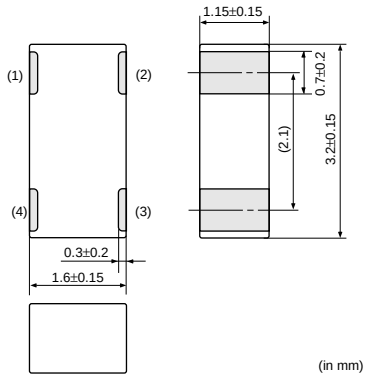


Type of Filter	EMI Suppression Effect	Description
Original Waveform	Voltage Waveform  Frequency Spectrum 	The Lower chart is a frquency response of the upper chart. Note that the scale of original wave chart and that of the output wave chart is different because of circumstances.
The commonly used 2-terminal varistor 	∗ Final voltage comes below 0V because of the affect of signal reflection. Voltage Waveform  Frequency Spectrum 	The rising part of pulse, which is mostly consists of high-frequency element, remains because inductance in electrodes becomes obstacle.
Chip Solid EMIGUARD® **VFM41R** 	Voltage Waveform  Frequency Spectrum 	The 3-terminal structure minimizes the effect of inductance in electrodes and pulse rising noise is absorbed completely.

On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

Chip Common Mode Choke Coils Film Type DLP31S Series

The DLP31S series is chip common mode choke coil that is realized high impedance in small size withferrite material technology and film processing technology. The DLP31S series has excellent performance at high frequency range. It is suitable for differential signal line application.



■ Features

1. DLP31S is common mode choke coil with small size, low profile, SMD. 3.2x1.6x1.15mm (tolerance: 0.15mm)
2. DLP31S has high common mode impedance (550ohm at 100MHz typ.) in small size.
3. DLP31S suppress high frequency noise that was unable to be suppressed with existing common mode choke coils. Suitable for differential signal line as like USB, because DLP31S does not provide distortion to high speed signal transmission due to its high coupling (Coupling coefficient: 0.98 min.)

■ Applications

1. USB lines of PC, Perpheral equipment.
2. LVDS lines of Note-PC, LCD.
3. USB lines of digital AV equipment such as digital camera.

13

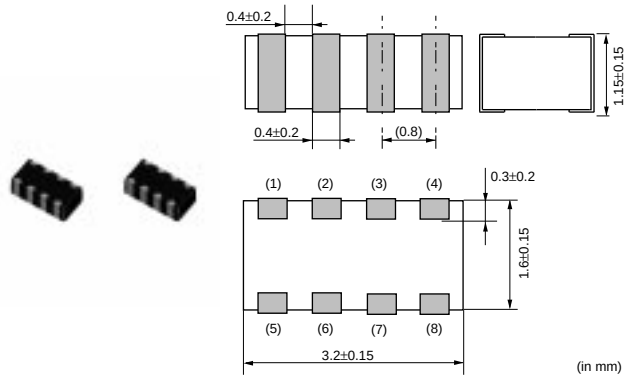
Chip Common Mode Choke Coils Arrays Film Type DLP31D Series

The DLP31D series is chip common mode choke coil array which is realized high coupling and high impedance in small size with ferrite material technology and thin film processing technology.
The DLP31D series has excellent performance at high frequency range.It is suitable for high-speed differential signal line application.



■ Features

1. 2 components are in one package of 3.2x1.6mm size.
2. Thin type 1.15mm
3. High common mode impedance characteristics (470ohm max. at 100MHz) in small size.
4. The DLP31D can suppress common mode noise without distortion to high speed signal transmission due to its high coupling.

■ Applications

1. IEEE1394 lines of digital videa camera, PC.
2. LVDS lines of Note-PC, LCD.
3. USB lines of PC.

14

On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

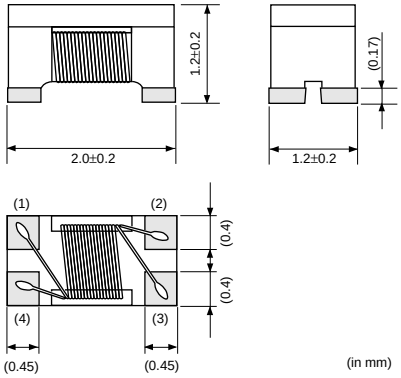
Chip Common Mode Choke Coils Winding Type DLW21S/DLW31S Series

DLW21 Series

■ Features

1. DLW21S series realizes small size and low profile. 2.0x1.2x1.2mm.
2. High common mode impedance at high frequency effects excellent noise suppression performance.
3. Various common mode impedance items of 67 to 370ohm can be used, considering noise level and signal frequency.
4. DLW21S series enables noise suppression for differential signal line, without distortion in high speed signal transmission due to its high coupling.
5. Lead is not contained in the product.
6. Small dimension enables higher density packaging.

DLW21S



■ Applications

1. USB lines of PC, Peripheral equipment.
2. LVDS lines of Note-PC, LCD.
3. USB lines of Small digital AV equipment such as digital camera.

Chip Common Mode Choke Coils Winding Type for Large Current DLW5AH/DLW5BS Series

The DLW5AH/5BS series is high performance wound type chip common mode choke coil.

■ Features

1. High impedance (maximum of 4000ohm at 100MHz : DLW5AH) enables great noise suppression.
2. Large rated current (maximum of 5A) is suitable for power line use.
3. DLW5AH/BS series does not damage high speed signal due to high coupling common mode choke coil structure.
4. Automatic mounting can be applied.

■ Applications

1. DC power lines in AC adapter of Portable equipment.
2. DC power lines of DC-DC converter, Bettery charger.

Ferrite Beads Inductors BL01/BL02/BL03 Series

■ Features

BL01/02/03 series are ferrite beads with lead wire to produce a high frequency loss for suppression of noise.
Simple construction and easy-to-use.
Effective for low impedance circuits such as of power supply and ground. Effective also for preventing overshoot and undershoot of digital signal in clock or the like, and suppressing of higher harmonic wave.
Suitable for prevention of abnormal oscillation at high frequency amplifying circuit.

On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

Chip EMIGUARD® (EMIFIL® with Varistor Function) VFR3V/VFS6V/VFS9V Series

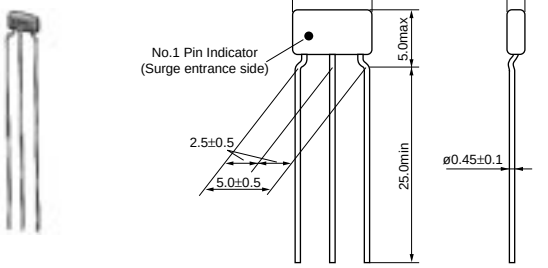
for Semiconcutor Protection VFR3V Series

■ Features

The VFR3V series is designed for ESD surge protection of IC. It absorb ESD surge rushed into IC's I/O terminal efficiently.

■ Applications

Elimination of noise and protection of semiconductors in office equipments, including computers and peripheral equipments, copy machines, and communication terminals.



(in mm)

Part Number	Rated Voltage (Vdc)	Varistor Voltage (Vdc)	Capacitance (pF)	Rated Current (mA)	Peak Pulse Current (A)	Operating Temperature Range (°C)

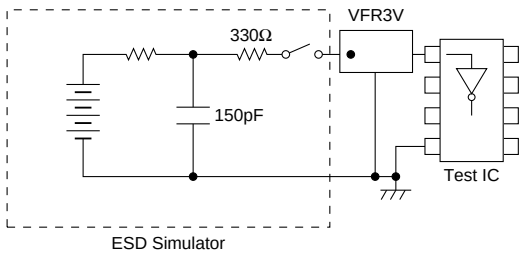
Noise Suppression Effect of VFR/VFS Series

■Example of IC Protection

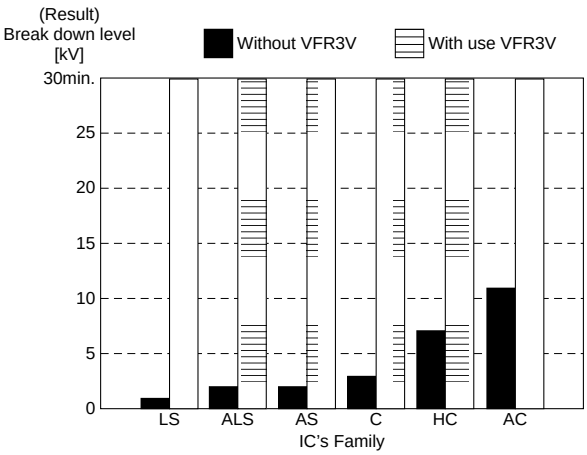
● Testing Method

1. Put ESD surge to IC (7404 family) input terminal with ESD simulator based on IEC 801-2.
2. Check IC's operation.
3. If IC's operation is normal, increase ESD voltage in 1kV step.
4. Continue above steps 1 to 3 till IC's operation become abnormal.

[Test Circuit]

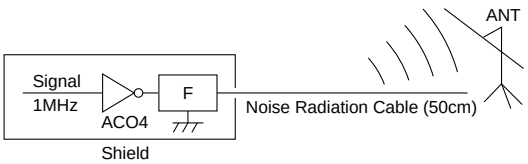


● Result



■Example of EMI Suppression Effect

[Test Circuit]



Type of Filter	EMI Suppression Effect	Description
Before Countermeasures (No Filters)		
Use **VFR3VD31E131T51**		

Noise Suppression Effect of VFR/VFS Series

■Features (VFS9V)

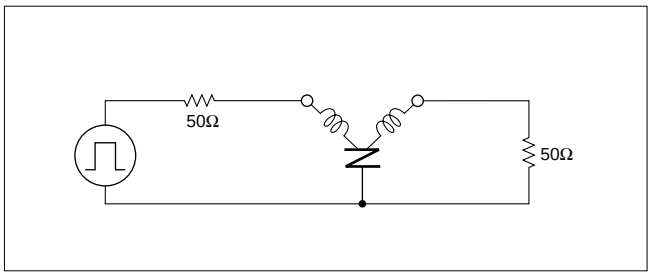
Items	Test methods	Rated values
Overload	1.4 times the varistor voltage (V_1) is applied for 5 minutes at room temperature.	
Surge Test (1)	At room temperature. Surge are applied are 10^5 times every 2 seconds. Then after 1 or 2 hours, the sample is measured. 	
Surge Test (2)	At room temperature. Capacitor "C" is changed with 70V, then dischanged to apply the voltage to the sample. Tested once (resuming JASO A-1). 	
High Temperature Load	At a temperature of 85±3℃. The varistor voltage V_1 is continuously applied to the sample for 1000 to 1024 hours. Then it is left at room temperature, for 4 to 24 hours before measuring.	

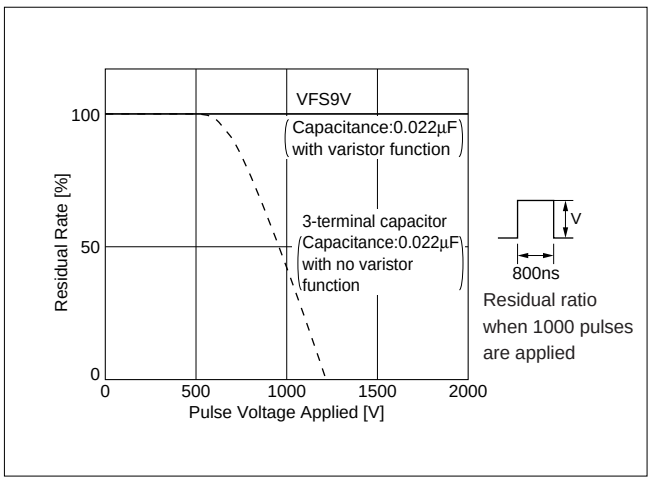
Items	Specifications
Rated Capacitance Change	Within±15%
Insulation Resistance	500kΩ min
Rated of Change in Varistor Voltage V1*	Within±15%
Voltage Rate	1.30 max

*V_1 : Voltage when 1mA is applied

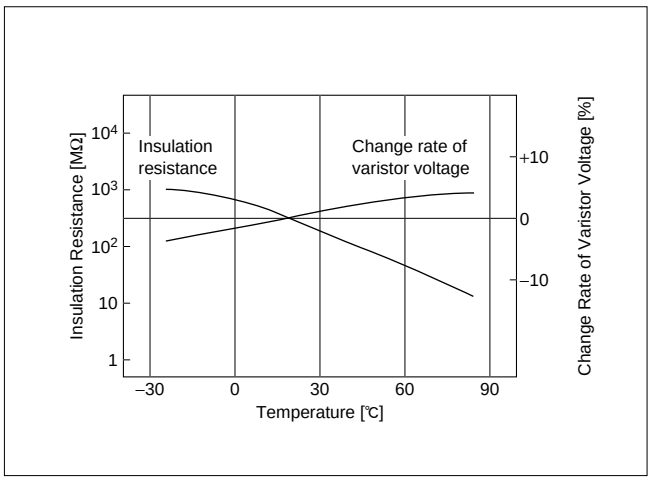
■Pulse-Voltage Breakdown Characteristic (VFS9V)

The VFS9V EMIGUARD® use a self healing varistor-capacitor, so that it can be used under a 500 to 600V surge which would break conventional disk type EMI filters. As shown in figure below the EMIGUARD® withstands 2000V impulses applied 1000 times.





■Temperature Characteristics of Varistor Voltage-Insulation Resistance (VFS9V)



Continued on the following page.

Noise Suppression Effect of VFR/VFS Series

Continued from the preceding page.

■Noise Absorption Effect of EMIGUARD®

Type of Filter	EMI Suppression Effect	Description
without EMIGUARD®		Waveform when EMIGUARD® is not used. (Surge from a noise simulator)
with EMIGUARD® 		Waveform after the noise passed through EMIGUARD®. Little noise is recorded.

■Comparative Data

1. Absorption of quick-rising, high-frequency noise (10ns/div, 100V/div)

Type of Filter	EMI Suppression Effect	Description
without Filters	 Noise wave applied	
Conventional varistor 		As with the 2-terminal capacitor.
2-terminal capacitor (with varistor function) 		The 2-terminal capacitor is influenced by lead line inductance, leaving behind some of the rising and falling edges. The residual noise can cause system to malfunction.
VFS9V 		The 3-terminal structure eliminates most of the lead line inductance. This allows the VFS9V to completely absorb the rising and falling edges of the applied pulses.

Continued on the following page.

Noise Suppression Effect of VFR/VFS Series

Continued from the preceding page.

2. Absorption of wide-pulse noise (50ns/div, 200V/div)

Type of Filter	EMI Suppression Effect	Description
without Filters	 Noise wave applied	
2-terminal capacitor 		In case of capacitors, the voltage of the residual surge, 1300V is higher than that of the above example. The wave height is almost the same as the original.
3-terminal capacitor (with ferrite bead) 		Conventional EMI filters do not work for wide-pulse noise because capacitors are saturated. In this example, the residual 1200V surge can cause system to breakdown.
VFS9V 		Bypassing high-voltage, the varistor-capact.

On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

Block Type EMIFIL® BNX Series

BNX Series

The block type "EMIFIL" BNX series incorporates through-type capacitor, monolithic chip capacitors and bead. The BNX is high performance for use in DC power circuits.

■ Features

1. The filter enables obtain high insertion loss in wide frequency range from 0.5MHz to 1GHz.
2. The only one filter block enables suppress noise of both the positive and negative lines.
3. There are no connection routes in the current circuits, thus ensuring highly reliable performance.

■ Applications

Noise elimination from DC power sources in a variety of switching power sources, engine control units, digital equipment and computer terminals.

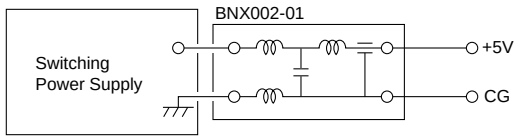
Noise Suppression Effect of BNX Series

■Suppression of DC Side Ripple of the Switching Power Supply

[Testing Circuit]



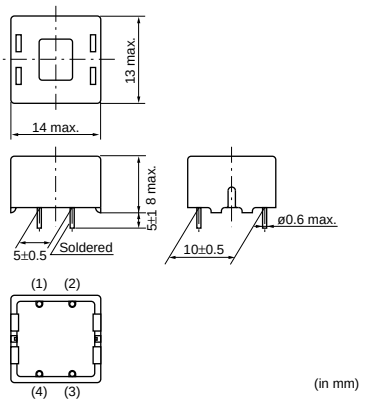
Type of Filter	EMI Suppression Effect	Description
When **BNX002** is not used	+5.0V → 50µs/div 0.2V/div 	High frequency noise, max. 0.5V, can be seen.
When **BNX002** is used	+5.0V → 50µs/div 0.2V/div 	Noise can be almost suppressed by BNX002.

On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

Common Mode Choke Coils (for DC Line) PLT09H Series

PLT09H Series

The PLT09H series is common mode choke coil for DC line. It is effective against the common mode noise that can cause radiative noise in power supply lines and interface lines. The additional normal mode inductance enables high suppression effect to radiation noise.



(in mm)

■ Features

1. This is a wide frequency range type, applicable in applications ranging from a few MHz to several 100MHz.
2. It features a low-profile design.

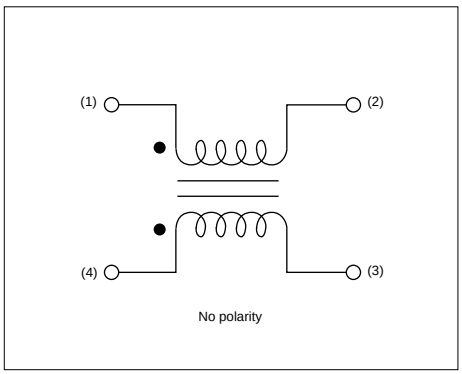
■ Applications

1. Noise suppression of SW power supply, DC-DC converter.
2. DC power lines in AC adapter of Portable equipment.

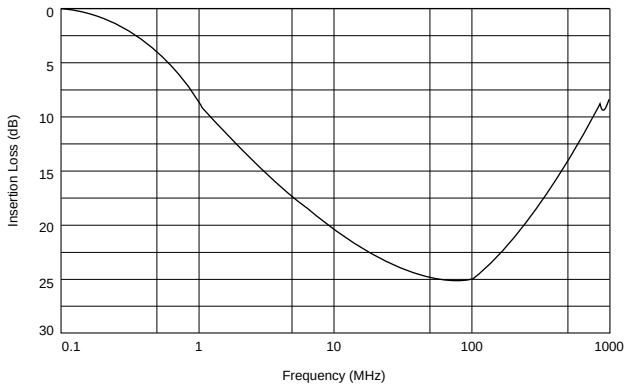
Part Number	Common Mode Inductance (μH)	Rated Current (A)	Rated Voltage (Vdc)	Withstand Voltage (Vdc)
PLT09HN2003R0P1	20 min.	3	50	125

Operating Temperature Range : -40°C to 85°C

■ Equivalent Circuit



■ Insertion Loss Characteristics (Typical)



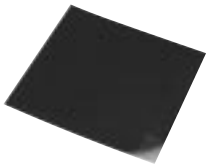
On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

Microwave Absorbers EA10/EA20/EA21 Series

EA10 Series

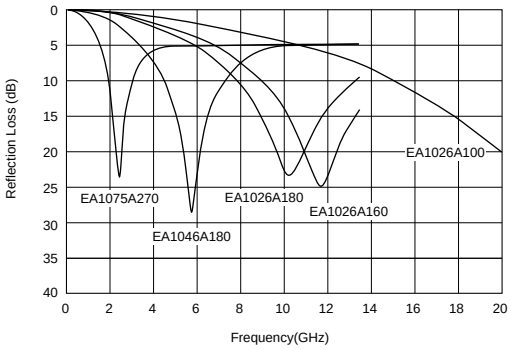
■ Features

1. Excellent elasticity and durability with silicon rubber.
2. Suitable for prevention abnormal oscillation in high frequency module, suppression suprious spectra and prevention interference between circuits.
3. Holding easily in equipments with adhesive tape.



Part Number	Applicable Frequency	Thickness (mm)	Flame Resisting	Halogen	Operating Temperature Range
EA1026A100	20.0 GHz (Typ.)	1.0 (Typ.)	-	Halogen Free	-40 to +80 °C
EA1026A160	11.5 GHz (Typ.)	1.6 (Typ.)	-	Halogen Free	-40 to +80 °C
EA1026A180	10.0 GHz (Typ.)	1.8 (Typ.)	-	Halogen Free	-40 to +80 °C
EA1046A180	5.8 GHz (Typ.)	1.8 (Typ.)	UL94V-0	Halogen Free	-40 to +80 °C
EA1075A270	2.5 GHz (Typ.)	2.7 (Typ.)	UL94V-0	Halogen Free	-40 to +80°C

■ Refrection Loss



EA20/21 Series

■ Features

1. High-micro and High-loss characteristics with magnetically shielded can suppress noise in wide frequency band for digital equipments.
2. Thin (0.2mm-1.0mm) and flexible sheet makes easy handling in assembly process.
3. Holding easily in equipments with adhesive tape.
4. EA20xx series : Non Halogen type
   EA21xx series : UL94V-0 certified material is used.

Part Number	Applicable Frequency	Thickness (mm)	Flame Resisting	Halogen	Operating Temperature Range
EA2070A020	2.5GHz (Typ.)	0.2 (Typ.)	-	Halogen Free	-40 to +105 °C

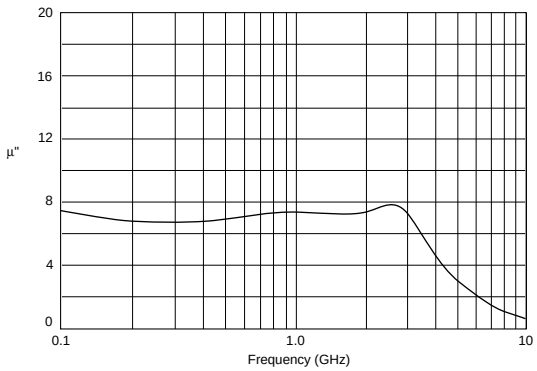
■ Magnetic Permeability-Reluctance (Typical)



Chip EMIFIL® ⚠Caution/Notice

■ ⚠Caution (Soldering and Mounting)

Give special attention when mounting chip "EMIFIL" BLM_P/NFM_P series close to other product that radiate heat.The excessive heat by other products may cause deterioration of insulation resistance and excessive heat at this product, resulting in the fire.

■ Notice (Storage and Operating Conditions)

< Operating Environment >

Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

< Storage and Handling requirements >

1. Storage Period
   BLM/BLA/VFM14R/DLP31S/DLM2HG series should be used within 6 months, the other series should be used within 12 months. Used the products which the period after delivered solderability should be checked if this period is exceeded.
2. Storage conditions
   (1) Storage temperature : -10 to 40 C.
   Relative humidity : 30 to 70%
   Avoid sudden changes in temperature and humidity.
   (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

■ Notice (Rating)

Noize suppression levels resulting from MURATA's EMI suppression filters "EMIFIL" may vary, depending on the circuits and ICs used, type of noise, mounting pattern, lead wire length, mounting location, and other operating conditions. Be sure to check and confirm in advance, the noise suppression effect of each filter, in actual circuits,etc. before applying the filter in a commercial-purpose equipment design.

■ Notice (Soldering and Mounting)

< Operating Environment >

Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

< Storage and Handling requirements >

1. Storage Period
   Products which inspected in Murata over 12 months ago should be examined and used, which can be confirmed with inspection No.marked on the container.
   Solderability should be checked if this period is exceeded. (NFM41P/55P, VCM series should be used within 6 months.)
2. Storage conditions
   (1) Storage temperature : -10 to 40 C.
   Relative humidity : 30 to 70%
   Avoid sudden changes in temperature and humidity.
   (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Lead Type EMIFIL® ⚠Caution/Notice

■ ⚠Caution (Rating)

Do not use products beyond the rated current and the rated voltage, or deterioration of the insulation resistance, excessive heat may catch fire.

■ ⚠Caution (Soldering and Mounting)

Mounting holes should be designed as specified in this specifications. Other design than shown in this specifications may cause cracks in ceramics which may lead to smoking or firing.

■ Notice (Storage and Operation Condition)

< Operating Environment >

1. Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.
2. Do not use products near water, oil or organic solvents. Avoid environment where dust or dirt may adhere to product.

< Concerned to "EMIGUARD" >

VFR3V series is designed only to absorb electro-static surges. Do not use this product to absorb large energy surges such as lighting or switching related surges.

< Storage and Handling Requirements >

1. Storage Period
   Used the products which 12 months after delivered solderability should be checked if this period is exceeded.
2. Storage conditions
   (1) Storage temperature : -10 to 40 C.
   Relative humidity : 30 to 70%
   Avoid sudden changes in temperature and humidity.
   (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

■ Notice (Rating)

Noize suppression levels resulting from MURATA's EMI suppression filters "EMIFIL" may vary, depending on the circuits and ICs used, type of noise, mounting pattern, lead wire length, mounting location, and other operating conditions. Be sure to check and confirm in advance, the noise suppression effect of each filter, in actual circuits,etc. before applying the filter in a commercial-purpose equipment design.

EMIFIL® (Soldering and Mounting)

1. Standard Land Pattern Dimensions

The capacitor type Chip EMIFIL® (NF□ series) / Chip EMIGUARD® (VFM series) suppress noise by conducting the high-frequency noise element to ground. Therefore, to obtain maximum performance from these filters, the ground pattern should be made as large as possible during the PCB design stage. As shown in the right, one side of the PCB is used for chip mounting, and the other is used for grounding.

Small diameter feedthrough holes are then used to connect the grounds on each side of the PCB. This reduces the high-frequency impedance of the grounding and maximizes the filter's performance. Please contact us if using thinner land pad than 18µm for NFM55P.

2. Solder Paste Printing and Adhesive Application

When reflow soldering the chip EMI suppression filter, the printing must be conducted in accordance with the following cream solder printing conditions.
If too much solder is applied, the chip will prone to be damaged by mechanical and thermal stress from the PCB and may crack. In contrast, if too little solder is applied, there is the potential that the termination strength will be insufficient, creating the potential for detachment.
Standard land dimensions should be used for resist and copper foil patterns.
When flow soldering the EMI suppression filter, apply the adhesive in accordance with the following conditions.
If too much adhesive is applied, then it may overflow into the land or termination areas and yield poor solderability. In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during flow soldering process.

3. Standard Soldering Conditions

(1) Soldering Methods

Use flow and reflow soldering methods only.
Use standard soldering conditions when soldering chip EMI suppression filters chip varistor.
In cases where several different parts are soldered, each having different soldering conditions, use those conditions requiring the least heat and minimum time.

(2) Soldering Temperature and Time

To prevent external electrode solder leaching and performance deterioration, solder within the temperature and time combinations illustrated by the slanted lines in the following graphs. If soldering is repeated, please note that the allowed time is the accumulated time.

Solder : H60A H63A solder(JIS Z 3238)

Flux :

- Use Rosin-based fulx(when using RA type solder, clean products sufficiently to avoid residual fulx.
- Do not use strong acidic fulx(with chlorine content exceeding 0.20wt%)
- Do not use water-soluble fulx.

●Allowable Flow Soldering Temperature and Time

BLM, BLA			20s max.
NFM, NFL, NFR NFW, NFA, DLM/P/W VFM			10s max.

(4) Reworking with Solder Iron

The following conditions must be strictly followed when using a soldering iron.

Pre-heating : 150°C 60 s min.

Soldering iron power output : 30W max.

Temperature of soldering iron tip / Soldering time : 280°C max./10s max. or 300°C max./3s max.*

*NFE31PT152Z1E9/VFM : 280°C max./10 s max. only
BLM : 350°C max./3 s max.

Do not allow the tip of the soldering iron directly to contact the chip.

For additional methods of reworking with soldering iron, please contact Murata engineering.

4. Cleaning

Following conditions should be observed when cleaning chip EMI filter.

(1) Cleaning Temperature : 60°C max. (40°C max. for alcohol type cleaner)

(2) Ultrasonic

Output : 20W/liter max.

Duration : 5 minutes max.

Frequency : 28kHz to 40kHz

(3) Cleaning agent

The following list of cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.

Do not clean DLW5AH/5BS, DLW21S/31S series.

In case of cleaning.please contact Murata engineering.

a) Alcohol cleaning agent

Isopropyl alcohol (IPA)

b) Aqueous cleaning agent

Surface active agent (Clean Thru 750H)

Hydrocarbon (Cold Cleaner 375)

High grade alcohol (Pine Alpha ST-100S)

*VFM41R series cannot be cleaned with high grade alcohol type aqueous cleaning agent.

Alkaline saponifier (Aqua Cleaner 210SEI -cleaner should be diluted within 15% using deionized water.)

(4) Ensure that flux residue is completely removed.

Component should be thoroughly dried after aqueous agent has been removed with deionized water.

(5) Some products may become slightly whitened.

However, product performance or usage is not affected.

For additional cleaning methods, please contact Murata engineering.

Lead Type EMIFIL® (Soldering and Mounting)

1. Mounting Hole

Mounting holes should be designed as specified in this specifications.

Part number	Bulk type (in mm)	Taping type (in mm)
DSN6 **DSS6** **VFR3V** **VFS6V**		DSN9 **DSN9H**		
DST9 **DST9H**		
DSS9 **DSS9H** **VFS9V**		
BNX	[Component Side] 	[TERMINAL LAYOUT (Bottom figure)]  PSG : Power supply ground CG : Load circuit ground CB : Load circuit + Bias

2. Using THE block type EMIFIL® effectively

The block type EMIFIL® effectively prevents unwanted reflections and external noise from entering the equipment circuitry and power lines by grounding all the high frequency components which make up the noise. Therefore, if grouding is improperly done, the filters may be unable to achieve the performance they are capable of. To prevent this, be sure to observe the following instructions.

(1) When designing the P.C. board, use all the available grounding terminals, and arrange the grounding circuit so that the area of the foil for the grounding circuit is maximized.

(2) Minimize the distance between the P.C. board ground and the filter's grounding plate. Use of through-hole P.C. boards.

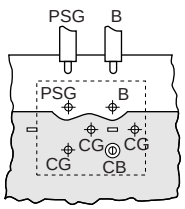
(3) Whichever P.C. board is used, push the filter into the P.C. board up to the terminal roots.

(4) Do not connect PSG to CG by any other means except through the filter. (See the item 1. TERMINAL LAYOUT)

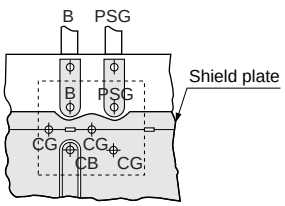
[P.C.B. BOARD PATTERNS]

Use a bilateral P.C. board. Insert the BNX into the P.C.board until the root of the terminal is secured. then solder.

(1) FRONT VIEW



(2) BOTTOM VIEW



PSG: Power supply ground
CG : Load circuit ground
CB : Load circuit + Bias

Continued on the following page.

Lead Type EMIFIL® (Soldering and Mounting)

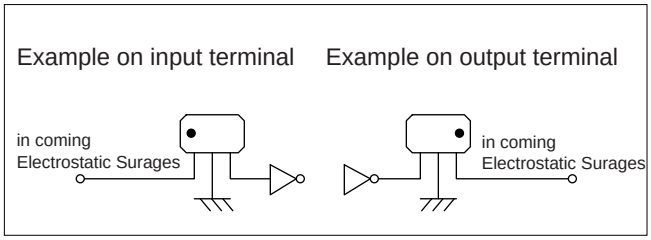
Continued from the preceding page.

3. Using EMIGUARD® effectively

(1) Terminal (with mark) should be connected to the line of incoming electrostatic surge. (There is polanty.) Otherwise, no effect in ESD suppression can be expected. (VFR3V)
(2) Products should be used at rated voltage or less and rated current or less.
(3) Products should not be applied for the absorption of surge which have large energy (ex. induced lighting surges, switching surges) because it is designed for the absorption of electrostatic surges. (VFR3V)
(4) Electrostatic test should be done on the following conditions. (VFR3V)

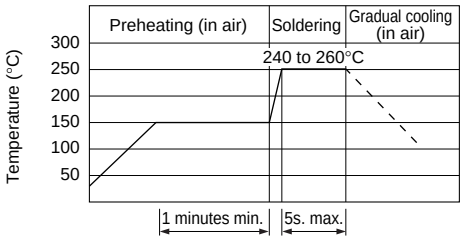
$n \cdot [C / R \cdot V^2]^2 < 8.0 \times 10^5$

n : Times applies
C : Charging Capacitance (pF)
V : Testing Voltage (kV)
R : Charging Resistance (Ω)



4. Soldering

(1) Use Rosin-based flux. Do not use strong acidic flux with halide content exceeding 0.2 (wt)% (chlorine conversion value).
(2) Standard flow soldering profile.
(3) Products and the leads should not be subjected to any mechanical stress during soldering process. (and also while subjected to the equivalent high temperature.)



Pre-heating	150˚C, 60 seconds min.
Solder Temperature	240 - 260°C, 5 seconds within

5. Cleaning Conditions

Do not clean VFR3V, PLT09H and VFS6Vseries.
Clean other parts on the following conditions.
(1) Cleaning temperature shall be limited to 60°C max.(40°C max for alcohol type cleaner.)
(2) Ultrasonic cleaning shall comply with the following conditions with avoiding the resonance phenomenon at the mounted products and P.C.B.
Power : 20 W / l max. Frequency : 28kHz to 40kHz
Time : 5 min. max.
(3) Cleaner
a) Alcohol type cleaner
• Isopropyl alcohol (IPA)
b) Aqueous agent(PLT series cannot be cleaned)
• Surface Active Agent Type (CLEANTHROUGH 750H)
• Hydrocarbon Type (COLDCLEANER 375)
• Higher Alcohol Type(PINE ALPHA ST-100S)
• Alkali Saponification Type (*AQUACLEANER 210SEI)
* Alkali saponification shall be diluted to 15% volume with de-ionized water.
(4) There shall be no residual flux and residual cleaner after cleaning.
In the case of using aqueous agent, products shall be dried completely after rinse with de-ionized water in order to remove the cleaner.
(5) Other cleaning : Please contact us.

(in mm)

Item	Code	Dimensions (mm)	Remarks
Pitch of Component	P	12.7	Product inclination ΔS determines tolerance
Pitch of Sprocket Hole	P_0	12.7±0.2	
Length from Hole Center to Component Center	P_1	3.85±0.7	
	P_2	6.35±1.3	Tape deviation in feeding direction
Width of Body	D	7.0 max.	DSN6N
		8.0 max.	DST(S)6N/VFS6V/VFR3V
		9.5 max.	DSN9N(H)/DST9N(H)
		12.0 max.	DSS9N(H)/VFS9V
Deviation along Tape, Left or Right	ΔS	0±1.0	
Carrier Tape Width	W	18.0±0.5	
Position of Sprocket Hole	W_1	9.0+0/-0.5	Tape width deviation
Protrusion Length	ℓ	+0.5 to -1.0	
Diameter of Sprocket Hole	D_0	ø4.0±0.1	
Lead diameter	d	ø0.6	ø0.45±0.1(VFR)
Total Tape Thickness Total Thickness, Tape and Lead Wire	t_1	0.7±0.2	Including bonding tape thickness
	t_2	1.5 max.	
Deviation across Tape	Δh_1	1.0 max.	
	Δh_2	1.0 max.	
Portion to Cut in Case of Defect	L	11.0+0/-1.0	
Hold Down Tape Width	W_0	12.0±0.5	
Hold Down Tape Position	W_2	1.5±1.5	
Lead Distance between Reference and Bottom Planes	H	20±1.0	Q91 Type
		16.5±1.0	Q92, U21 Type
		18.5±1.0	Q93, U31 Type
Lead Spacing	F	5.0+0.8/-0.2	
	F_1	2.5+0.4/-0.2	

Chip EMI Suppression Filter Design Kits

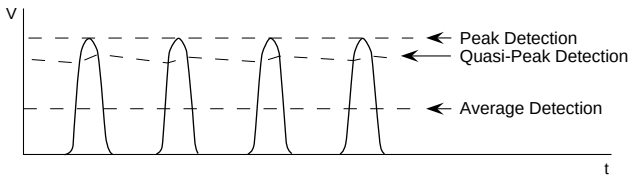
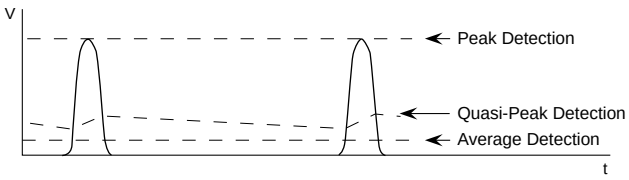
Peak≧Quasi-Peak≧Average

(Qp)



Short Repetition Period



Long Repetition Period

3. Limits of CISPR 22/EN55022

(1)CISPR 22 recommends measurement at 10m distance. However, other distance is acceptable if the limitation is converted according to following calculation. Limitation show left is converted to limitation for 3m distance.

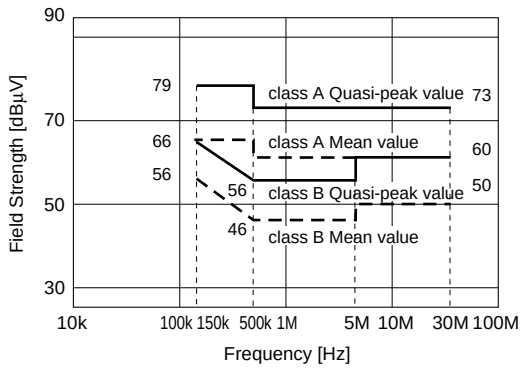
Conversion

Limitation for 10m Distance	→	Limitation for 3m Distance
R_{10} (dB μ V/m)		R_3 (dB μ V/m)
r_{10} (μ V/m)		r_3 (μ V/m)
$R_{10}=20 \log r_{10}$		$R_3=20 \log r_3$

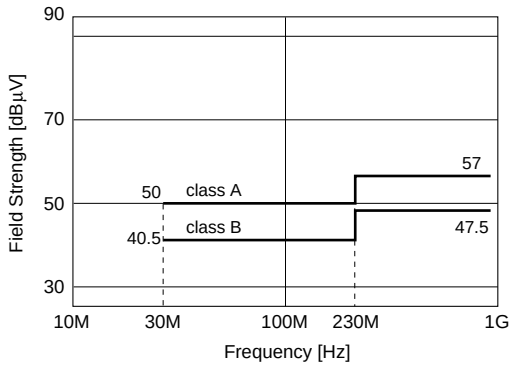
$$R_3=R_{10}+20\ (1-\log 3)$$

$$r_3 = \frac{10}{3}\ r_{10}$$

[Mains Terminal Interference Voltage (Power Supply)]



[Radiated Interference]



On the border frequency, lower limit shall be applied.

Class A Equipment : The equipment which is used in light industries area or commercial area.

Class B Equipment : The equipment which is used in residential area.

Continued on the following page.

Outlines of Major Noise Regulation Standards

Continued from the preceding page.

(2)Scope of CISPR 22 Regulation

This regulation applies to information technology equipment (ITE) which are defined as :

(a) Equipment that receive data from external signal sources ;

(b) Equipment that processes received data ;

(c) Equipment that output data

(d) Equipment that has less than 600V rated voltage in power supply

[CISPR Regulations]

CISPR 10 Organization, Regulations and Procedures of CISPR
CISPR 11 Industrial, Scientific and Medical (ISM) Radio-Frequency Equipment
CISPR 12 Vehicles, Motor Boats and Spark-Ignited Enginedriven
CISPR 13 Sound and Television Receivers
CISPR 14 Household Electrical Appliances, Portable Tools and Similar Electrical Apparatus
CISPR 15 Fluorescent Lamps and Iuminaries
CISPR 16 Radio Interference Measuring Apparatus and Measurement Methods
CISPR 17 Passive Radio Interference Filters and Suppression Components
CISPR 18 Power Transmission Cables and High Voltage Equipments
CISPR 19 Microwave Ovens for Frequencies above 1GHz
CISPR 20 Immunity of Sound and TV Broadcast Receivers Veceivers and Associated Equipment
CISPR 21 Interference to Mobile Radiocommunications in the Presence of Impulsive Noise
CISPR 22 Information Technology Equipment
CISPR 23 Industrial Scientific and Medical (ISM) Equipment
CISPR 24 Immunity Regulation of Information Technology Equipment

4. Limits of VCCI Voluntary Regulation

(1)VCCI recommend measurement at 10m distance. 3m or 30m distance measurement are also allowed.

(2)Scope of VCCI Voluntary Regulation

This regulation applies to information technology equipment (same as CISPR Pub.22), but the application is excluded on the following equipments :

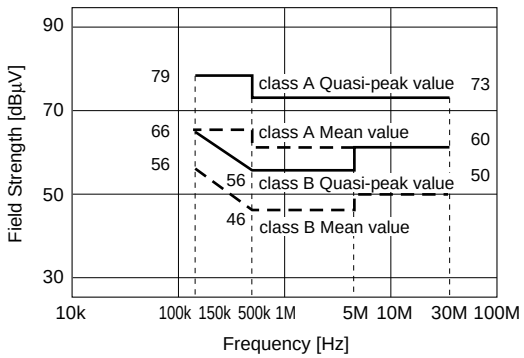
- Equipment for which other regulations already exist (e.g., household electrical appliances, radio and TV receivers)
- In station equipment principal purpose of which is electrical communication
- Industrial plant control system for which information processing is a secondary system function
- Industrial, commercial and medical testing and measuring systems for which data processing is a secondary system function
- Information equipment for which CISPR is conducting further deliberation

VCCI is the acronym of Voluntary Control Council for Interference by Data Processing Equipment and Electronic Office Machines.

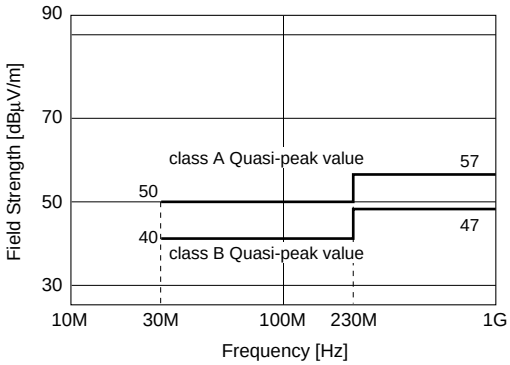
VCCI is organized by the following organizations :

- Japan Electronics and Information Technology Industries Association (JEITA)
- Japan Business Machine Makers Association (JBMA)
- Communication Industries Association of Japan (CIAJ)

[Mains Terminal Interference Voltage (Power Supply)]



[Radiated Interference]



On the border frequency, lower limit shall be applied.

Class B ITE : Equipment that designed to be used at home.

Class A ITE : Equipment that does not meet interference limit of class B equipment. However satisfying interference limit of class A equipment.

Continued on the following page.

Outlines of Major Noise Regulation Standards

Continued from the preceding page.

5. Limits of FCC Part 15 Subpart B

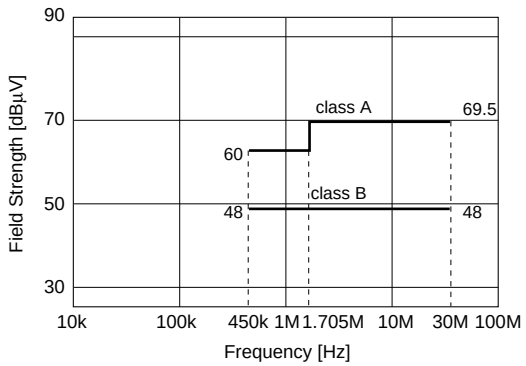
(1)Class A recommend to be measured with 10m distance.
Class B recommend to be measured with 3m distance.

(2)The FCC Part 15 regulation controls radiated interference by establishing quasi-peak and mean value limits for frequencies ranging from 30MHz to 40GHz (or maximum frequency's fifth harmonic, whichever is lower).
For AC main ports, the FCC Part 15 regulation controls mains terminal interference voltage by establishing quasi-peak value limits for frequencies ranging from 450kHz to 30MHz.

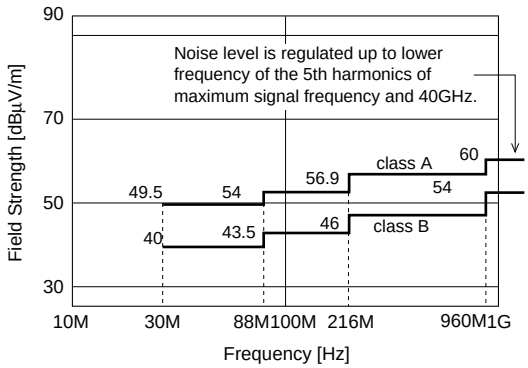
Measurement Frequency Range for Radiated Interference

Maximum Frequency the Equipment Internally Generates, Uses or Operates or Synchronizes (MHz)	Upper End of Measurement Frequency Range (MHz)
Less than 1.705	30
1.705 to 108	1000
108 to 500	2000
500 to 1000	5000
Over 1000	Maximum Frequency's Fifth Harmonic or 40GHz, Whichever is Lower

[Mains Terminal Interference Voltage (Power Supply)]



[Radiated Interference]



On the border frequency, lower limit shall be applied.

Class A Equipment : The digital equipment that is sold to in the commercial, industrial and office use.
Class B Equipment : The digital equipment that is sold to be used in residential area.

(3)There is no regulation on interference power.

[FCC Regulations]

Part 1 Procedures
Part 2 Frequency Division and Radio Wave Treaty Issues and General Rules
Part 15 Radio Wave Equipment

Outlines of Major Noise Regulation Standards

Continued from the preceding page.

6. Immunity Regulations in Europe Union

All electric/electronic equipment cannot be sold in Europe without CE marking. To use CE marking, they must satisfy related EC directive such as EMC directive.
For Information Technology Equipment, in EMC directive, emission regulations are integrated, and immunity regulations are applied. Although these immunity regulations are prepared by CENELEC, almost all contents are same as standards issued by IEC or CISPR.

All products which are sold in EU must satisfy EC directive which contains immunity regulation.

Principal EC Directive	
EMC Directive	89/336/EEC 92/31/EEC
Low-Voltage Electrical Products Directive	73/23/EEC
Machines Directive	89/392/EEC

Standard	Application	IEC	CISPR	CENELEC
Basic Standard		IEC61000-4 Series		EN61000-4 Series
Generic Standard		Residential, Commercial and Light Industry IEC61000-6-1 Industrial IEC61000-6-2	Residential, Commercial and Light Industry (CISPR61000-6-3) Industrial (CISPR61000-6-4)	Residential, Commercial and Light Industry EN50082-1 (EN50081-1) Industrial EN50082-2 (EN50081-2)
Product Family Standard	Radio, TV		CISPR 20 (CISPR 13)	EN55020 (EN55013)
	Information Technology Equipment		CISPR 24 (CISPR 22)	EN55024 (EN55022)
Product Standard				

Standards in bracket are Emission Standards.

Noise Suppression Principles by DC EMIFIL®

1. Function of DC EMI Suppression Filters

DC EMI suppression filters absorb and eliminate high frequency noise which may produce electromagnetic interfer-ence in PC board circuits.

These filters are used in secondary circuits, and are small in size and light in weight, which further enhances their excellent noise suppression functions.

Chip and adhesive type filters can be mounted on PC boards automatically.

These filters are effective in the suppression of radiation noise in computers, peripheral equipment, and digital circuit application equipment (including various types of microcom-puter application equipment), and function to suppress noise in audio/visual equipment, which uses digital memory chips and DSP.

These filters are also effective for improving the noise immunity of equipment used in noisy environments (such as electronic equipment for automobiles).

2. Noise Filter Suppression Principles

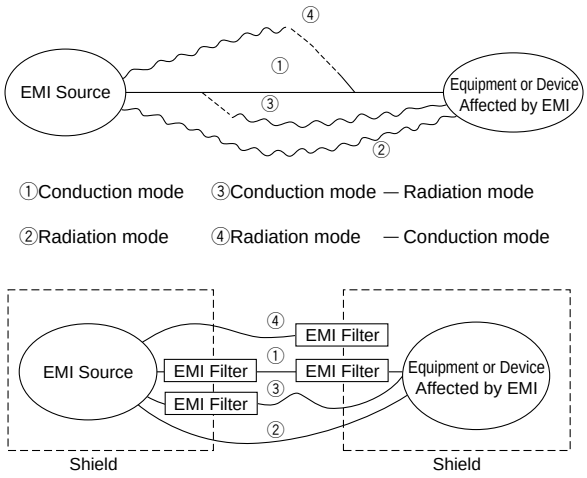
Generally, noise problems occur when the noise source and electronic equipment sensitive to the influence of noise are located in close proximity to one another.

In such situations, as shown in Fig, noise is con-ducted through a conductor, which produces an inductive field around the noise source.

To overcome such noise problems, it is preferable to reduce the amount of noise generated by the noise source or improve the noise resistance of adjacent equipment.

In order to satisfy equipment performance specifications and eliminate noise effectively at the same time, however, it is customary to reduce the amount of noise generated by the noise source, if it can't be eliminated altogether.

[EMI Propagation Mode and Model of Noise Filter Suppression]



3. Configuration of EMI Suppression Filters (DC)

DC EMI suppression filters are used to suppress noise pro-duced by conductors. Noise radiation can be suppressed, if it is eliminated with a filter in advance.

Generally, such noise suppression is achieved with DC EMI suppression filters, according to the capacitive and inductive frequency characteristics of the respective conductors in the circuit.

Filters of this kind can be roughly divided into those :

(1) employing a capacitor,

(2) employing an inductor,

(3) employing a capacitor and inductor combination.

Continued on the following page.

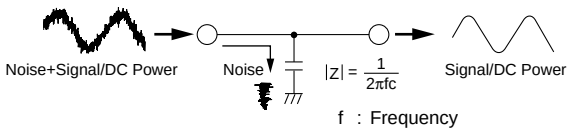
Noise Suppression Principles by DC EMIFIL®

Continued from the preceding page.

4. Capacitive Noise Suppression

When a capacitor is connected (bypass capacitor) to ground from a noisy signal line or power line, the circuit impedance decreases as the frequency increases. Since noise is a high frequency phenomenon, it flows to ground if a capacitor has been connected to ground, thereby making it possible to eliminate noise. (See Fig.)
EMI suppression filters employing a capacitor in this way are used to eliminate this type of noise.

[Capacitive Noise Suppression]



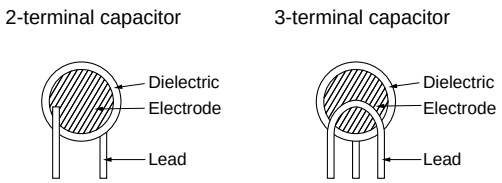
f : Frequency
c : Capacitance Value

5. High frequency Capacitor Characteristics Used for EMI Suppression Filters

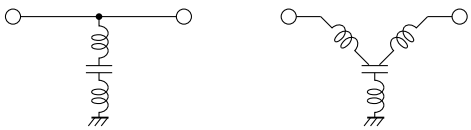
Even general-purpose capacitors can be used for noise suppression. However, since noise has an extremely high frequency range, general-purpose capacitors may not func-tion as effective bypass capacitors, due to the large residual inductance built into the capacitor.
All the capacitors used in MURATA's EMI suppression filters employ a 3 terminal structure or thru-type structure, which functions effectively even at high frequencies, thereby minimizing the influence of residual inductance. Consequently, an effective filter circuit can be formed even at frequencies exceeding 1GHz. (Refer to Fig.)

[Equivalent circuit of general-purpose capacitor and 3 terminal capacitor in the high frequency area and comparison of insertion loss]

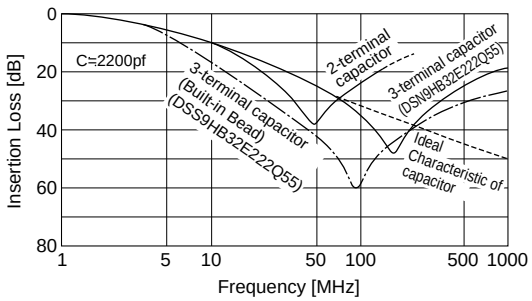
(a) Construction of capacitor



(b) Equivalent circuit of capacitors which is concerning ESL effect.



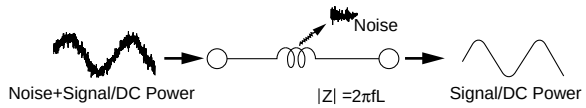
(c) Improvement of Insertion Loss Characteristics



6. Inductive Noise Suppression

When an inductor is inserted in series in a noise producing circuit (See Fig.), its impedance increases with frequency. In this configuration it is possible to attenuate and eliminate noise components (high frequency components). The MURATA EMI suppression filter functions in this way.

[Inductive Noise Suppression]



f : Frequency
L : Capacitance Value

Continued on the following page.

Noise Suppression Principles by DC EMIFIL®

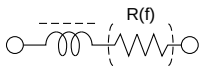
Continued from the preceding page.

7. Characteristics of Inductors Used in EMI Suppression Filters

General-purpose inductors also function to suppress noise when configured in series with a noise producing circuit. However, when general-purpose inductors are used, reso-nance may result in peripheral circuits, signal wave forms may become distorted, and satisfactory impedance may not be obtained at noise frequencies (due to insufficient high frequency impedance characteristics).

The inductors used for MURATA's EMI suppression filters are designed to function nearly as a resistor at noise frequencies, which greatly reduces the possibility of resonance and leaves signal wave forms undistorted. And since sufficient impedance is obtained for frequencies ranging to hundreds of MHz, these specifically designed inductors operate effectively to suppress high-frequency noise. (See Fig.)

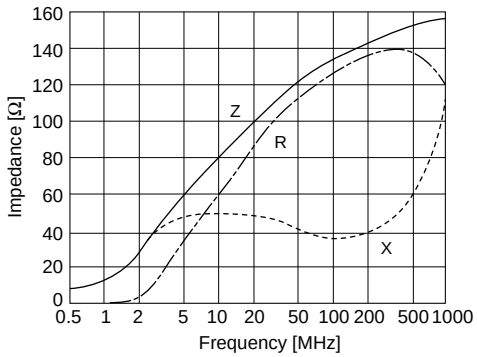
[Equivalent Circuit]



(Resistance element becomes dominant at high frequency.)

[Example of impedance frequency characteristics of inductor type EMIFIL®]

BL02RN2



8. Capacitive-Inductive EMI Suppression Filters

If a capacitive and inductive suppression characteristics are combined, it is possible to configure a much higher perfor-mance filter. In signal circuit applications where this combi-nation is applied, noise suppression effects which have little influence on the signal wave form become possible.

This type of filter is also effective in the suppression of high-speed signal circuit noise. When used in DC power circuits, capacitive-inductive filters prevent resonance from occurring in peripheral circuits, thus making it possible to achieve significant noise suppression under normal service conditions.

9. Other EMI Suppression Filters

In addition to the capacitive-inductive filter, MURATA also has an EMI suppression filter (EMIGUARD®) combining a capacitor with a varistor, useful for surge absorption; and a common mode choke coil effective, for common mode noise suppression.

MURATA also has a range of built-in filter connectors which greatly reduce filter mounting space requirements.

Continued on the following page.

Noise Suppression Principles by DC EMIFIL®

Continued from the preceding page.

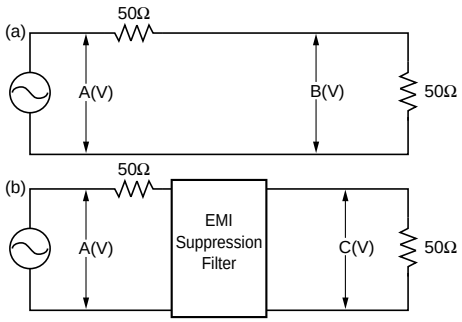
10. Expressing EMI Suppression Filter Effects

EMI Suppression Filter effects are expressed in terms of the insertion loss measured in the circuit, normally specified in MIL-STD 220A. As shown in the 50Ω impedance circuit in Fig., insertion loss is represented by the logarithmic ratio of the circuit output voltage with and without a filter in the circuit, which is multiplied by 20 and expressed in dB.

Therefore, an insertion loss of 20dB indicates an out put voltage ratio (B/C) of 1/10, and an insertion loss of 40dB indicates an output voltage ratio (B/C) of 1/100.

[Measuring Circuit of Insertion Loss]

Measuring Circuit of Insertion Loss



$$\text{Insertion Loss} = 20 \log \frac{B}{C} (\text{dB})$$

Murata EMI Filter Selection Simulator Ver.2.3.0

Differential Mode Transmission Circuit has been added

1 Select circuit.
(Select a new simulation circuit from File menu.)

2 Enter "Input Signal".

3 Set Driver IC.

4 Select filter.
(EMI filters or/and chip capacitor from the pull-down list.)

5 Set Transmission Line.

6 Set Receiver IC.

7 Click measuring point.
(Only for chip ferrite bead)

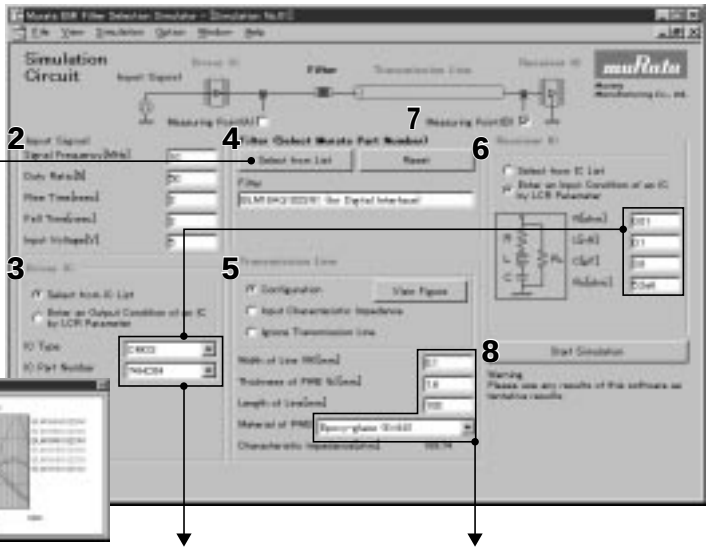
8 Click "Start Simulation" button.

9 Simulation results are displayed.

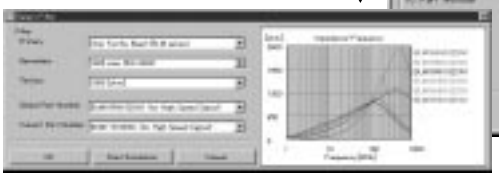
- **Simulation results with various charts are quickly displayed on your PC.**
- **Results can be displayed in standard format or user defined scaling.**
- **Simulates Differential Mode Transmission Circuit using common mode choke coil.**
- **Simulates ceramic capacitor, EMIFIL® capacitor type AND chip fferite beads.**

1 Select circuit.

Select a new simulation circuit from File menu.



4 Filters can be selected from "frequency-impedance characteristics" charts.

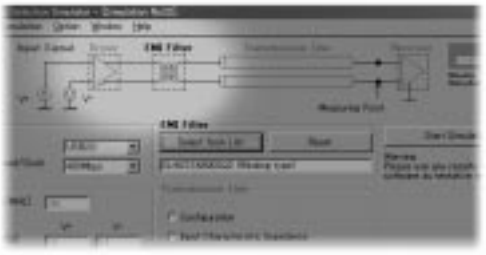


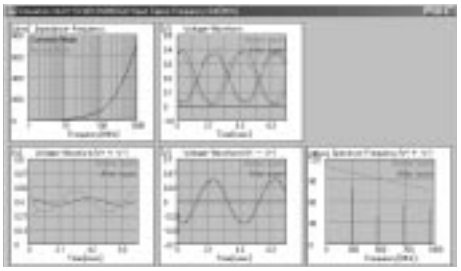
This software uses both the previous Part Numbers and the Global Part Numbers that have been adopted since June 2001.
By selecting "Global or previos Part Number" from the "View" menu, either part number can be converted into another.

Two ways of setting the driver/receiver IC parameter
The logic IC of TTL and CMOS can be selected from pull-down list or the LCR values can also be created.

Impedance automatically calculated.
Impedance cahracteristics of transmission line are automatically calculated.

Differential Mode Transmission Circuit using common mode choke coil





9 Results can be displayed in standard format or user defined scaling.

⚠Note:

1. Export Control
   〈For customers outside Japan〉
   Murata products should not be used or sold for use in the development, production, stockpiling or utilization of any conventional weapons or mass-destructive weapons (nuclear weapons, chemical or biological weapons, or missiles), or any other weapons.
   〈For customers in Japan〉
   For products which are controlled items subject to the “Foreign Exchange and Foreign Trade Law” of Japan, the export license specified by the law is required for export.
2. Please contact our sales representatives or product engineers before using our products listed in this catalog for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property, or when intending to use one of our products for other applications than specified in this catalog.
   ① Aircraft equipment ② Aerospace equipment
   ③ Undersea equipment ④ Power plant equipment
   ⑤ Medical equipment ⑥ Transportation equipment (vehicles, trains, ships, etc.)
   ⑦ Traffic signal equipment ⑧ Disaster prevention / crime prevention equipment
   ⑨ Data-processing equipment ⑩ Application of similar complexity and/or reliability requirements to the applications listed in the above
3. Product specifications in this catalog are as of July 2002. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering. If there are any questions, please contact our sales representatives or product engineers.
4. Please read rating and ⚠CAUTION (for storage and operating, rating, soldering and mounting, handling) in this catalog to prevent smoking and/or burning, etc.
5. This catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specification or transact the approval sheet for product specification before ordering.
6. Please read CAUTION and Notice in this catalog for safety. This catalog has only typical specifications. Therefore you are requested to approve our product specification or to transact the approval sheet for product specification, before ordering.
7. Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or third party's intellectual property rights and other related rights in consideration of your using our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.
8. No ozone depleting substances (ODS) under the Montreal Protocol are used in our manufacturing process.
