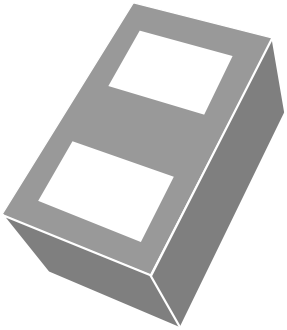
ESDAVLC6-1BF4

Single-line low capacitance Transil™, transient surge voltage suppressor (TVS)

Datasheet - production data



0201 package

Features

- Bidirectional device
- Multiple ESD strike sustainability
- Very low capacitance: 7 pF max at 0 V
- Low leakage current
- Ultra small PCB area
- RoHS compliant

Complies with the following standards

- IEC 61000-4-2:
  - ±15 kV (air discharge)
  - ±8 kV (contact discharge)

Applications

Where transient over voltage protection in ESD sensitive equipment is required, such as:

- Portable multimedia devices and accessories
- Notebooks
- Digital camera and camcorders
- Communication systems
- Cellular phone handsets and accessories

Description

The ESDAVLC6-1BF4 is a bidirectional single line TVS diode designed to protect the data lines or other I/O ports against ESD transients.

The device is ideal for applications where both reduced line capacitance and board space saving are required.

1 Characteristics

Table 1. Absolute maximum ratings (T_{amb} = 25 °C)

Symbol	Parameter		Value	Unit
V_{PP} (1)	Peak pulse voltage	IEC 61000-4-2 contact discharge IEC 61000-4-2 air discharge	±15	kV
T_{op}	Operating temperature range		-30 to +85	°C
I_{PP}	Peak pulse current (8/20 µs)		3	A
T_{stg}	Storage temperature range		- 55 to +150	°C

1. For a surge greater than the maximum values, the diode will fail in short-circuit.

Figure 2. Electrical characteristics (definitions)

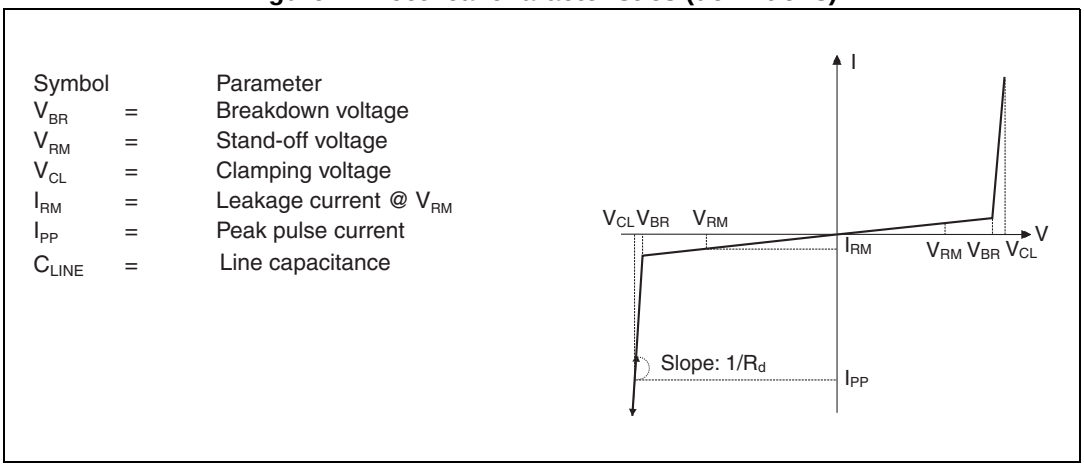

Table 2. Electrical characteristics (values, T_{amb} = 25 °C)

Symbol	Test condition	Min.	Typ.	Max.	Unit
V_{BR}	Breakdown voltage, I_{RM} = 1 mA	6		10	V
I_{RM}	Leakage current, V_{RM} = 3 V per line			100	nA
R_d	Dynamic resistance, pulse width 100 ns		1.7		Ω
C_{LINE}	Line capacitance, F = 1 MHz, V_{OSC}30 mV	4		7	pF
V_{CL}	+8 kV contact discharge after 30 ns IEC 61000 4-2		35		V

Figure 3. ESD response to IEC 61000-4-2 (typical values, +8 kV contact discharge)

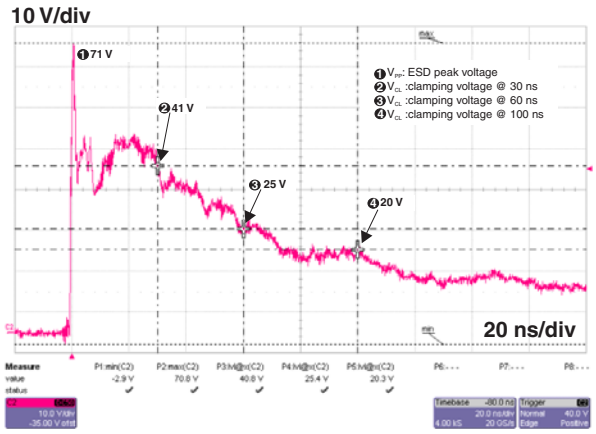

Figure 4. ESD response to IEC 61000-4-2 (typical values, -8 kV contact discharge)

2 Package information

- Epoxy meets UL94, V0
- Lead-free package

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: *www.st.com*. ECOPACK® is an ST trademark.

2.2 Packing information

Figure 10. Footprint in mm (inches)

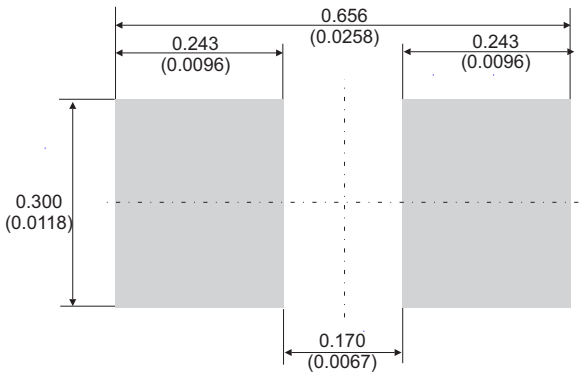

Figure 11. Marking

Note: The marking codes can be rotated by 90° or 180° to differentiate assembly location.In no case should this product marking be used to orient the component for its placement on a PCB. Only pin 1 mark is to be used for this purpose.

3 Recommendation on PCB assembly

3.1 Stencil opening design

1. General recommendations on stencil opening design
   a) Stencil opening dimensions: L (Length), W (Width), T (Thickness).

Figure 13. Stencil opening dimensions

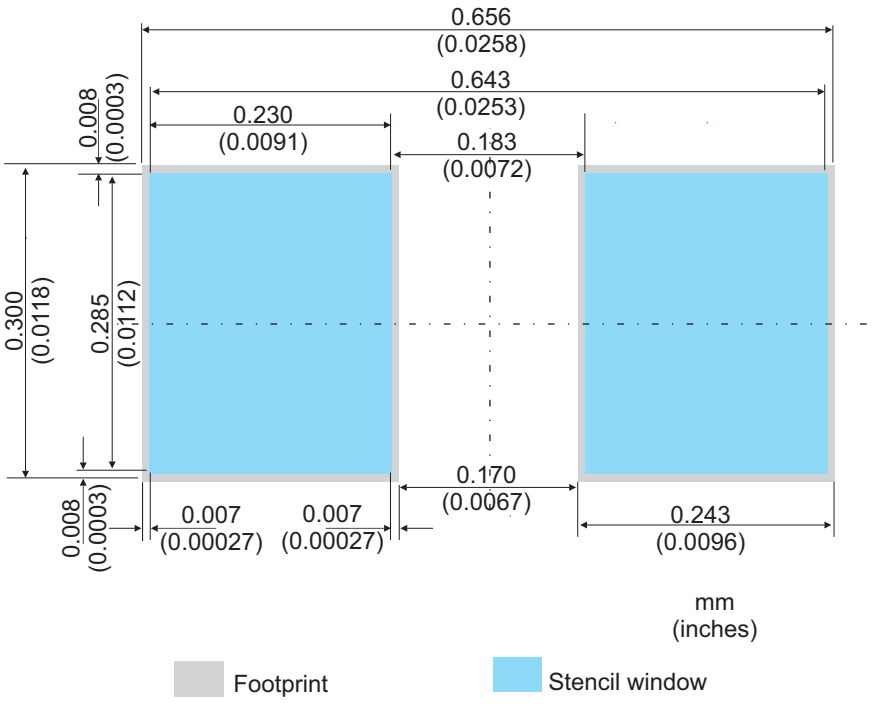
   b) General design rule
   Stencil thickness (T) = 75 ~ 125 µm

$$\text{Aspect Ratio} = \frac{W}{T} \geq 1.5$$

$$\text{Aspect Area} = \frac{L \times W}{2T(L + W)} \geq 0.66$$

2. Recommended stencil window
   a) Stencil opening thickness: 80 µm
   b) Other dimensions: see *Figure 14*

Figure 14. Recommended stencil window position, stencil opening thickness: 80 µm



3.2 Solder paste

1. Use halide-free flux, qualification ROL0 according to ANSI/J-STD-004.
2. “No clean” solder paste recommended.
3. Offers a high tack force to resist component displacement during PCB movement.
4. Use solder paste with fine particles: Type 4 (powder particle size 20-48 µm per IPC J STD-005).

3.3 Placement

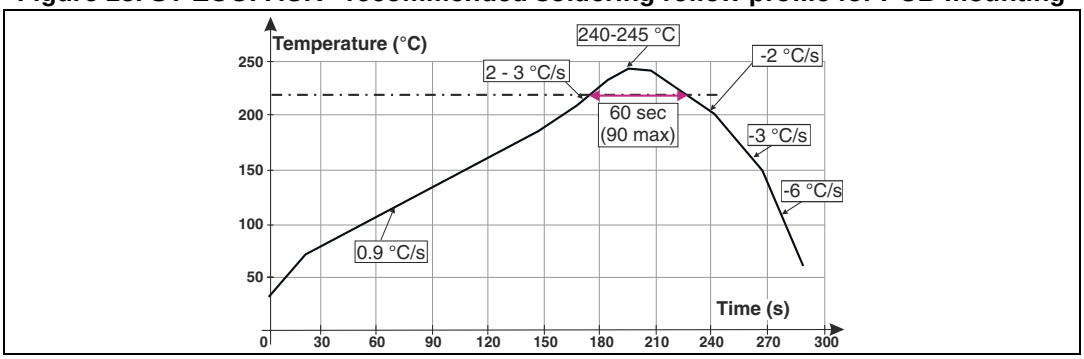
1. Manual positioning is not recommended.
2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering.
3. Standard tolerance of ± 0.05 mm is recommended.
4. 1.0 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
6. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

3.4 PCB design preference

1. To control the solder paste amount, the closed via is recommended instead of open vias.
2. The position of tracks and open vias in the solder area should be well balanced. The symmetrical layout is recommended, in case any tilt phenomena caused by asymmetrical solder paste amount due to the solder flow away.

3.5 Reflow profile

Figure 15. ST ECOPACK® recommended soldering reflow profile for PCB mounting



Note: Minimize air convection currents in the reflow oven to avoid component movement.

4 Ordering information

Figure 16. Ordering information scheme

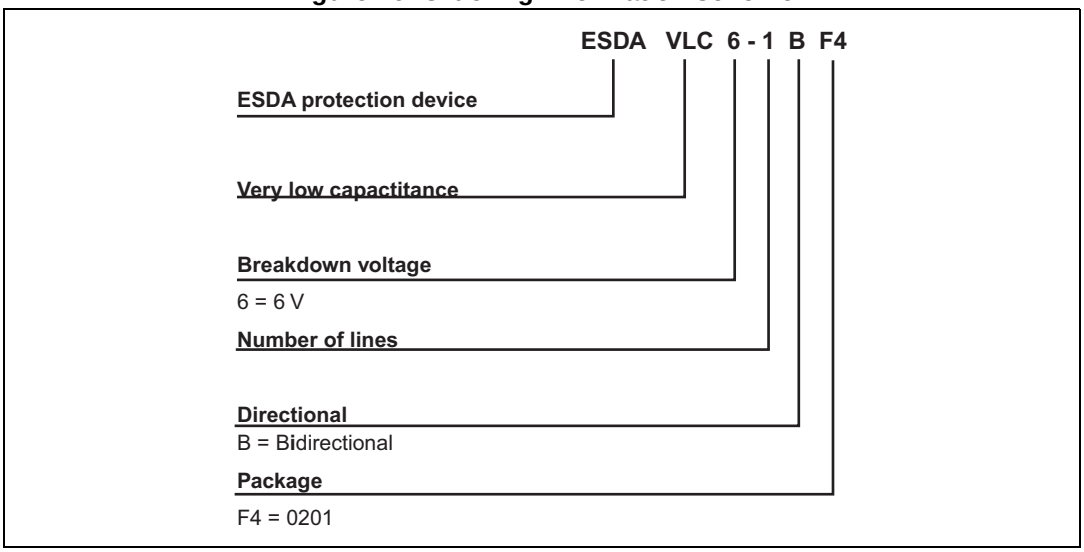


Table 4. Ordering information

Order code	Marking	Package	Weight	Base qty	Delivery mode
ESDAVLC6-1BF4	D(1)	0201	0.116 mg	15 000	Tape and reel

1. The marking codes can be rotated by 90° or 180° to differentiate assembly location

5 Revision history

Table 5. Document revision history

Date	Revision	Changes
02-May-2012	1	First issue
20-May-2015	2	Updated package graphics and dimensions. Updated *Table 2* and *Figure 16*. Removed internal restriction.
