

First Aid Extra bright yellow + signal red

Besides the traditional orange and green Rescue Colours, bright yellow and signal red are now, in addition, the agreed international colours for First-Aid.

In the near future, these colours will be seen on Ambulances and Emergency Service equipment throughout Europe.

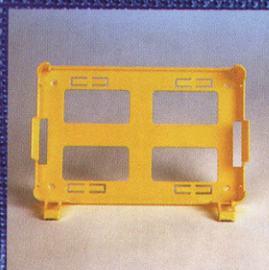

With this new series of multi purpose cases the SÖHNGEN® First-Aid Series EXTRA is joining the international move towards harmonisation of these colours.

This combination of bright yellow and signal red colours is always a good contrast on light or dark backgrounds.

These bright colours are easy to identify and distinguishable from a distance, so precious time is saved.

Reflection strips on each case allows easier identification in the dark and therefore increases personal safety at the accident scene. Bright yellow also combines well with strip lighting.

- Increased visibility means increased security.
- Increased security means better preparation.
- Better preparation saves lives!

CASES:

Manufactured from ABS thermoplastic, colour bright yellow. Decay, impact and temperature withstanding, dust and splash proof, maintenance free.

Flexible inner partitioning, transparent lids, safety lock, strong handle - the kit can be lead sealed. Inclusive of wall bracket. 90° Stop-Arrest Facility.

SIGNAGE:

Special signage in signal red lettering and specific screen printed branch pictograms. With additional reflector strips and colour pictograms.

CONTENTS:

All fillings adhere to the specifications of the German DIN 13 157.

We place a great emphasis on the quality of the bandage and wound dressings contained within our cases. They are manufactured in Germany and conform to the highest quality standards.

The models "Extra+" contain additional materials which exceed the requirements of the DIN.

We strongly recommend this as it gives you extra security in the event of an emergency.
