

Single, Dual, Quad General Purpose Micropower, RRIO Operational Amplifiers

ISL28114, ISL28214, ISL28414

The ISL28114, ISL28214, and ISL28414 are single, dual, and quad channel general purpose micropower, rail-to-rail input and output operational amplifiers with supply voltage range of 1.8V to 5.5V. Key features are a low supply current of 390 μ A maximum per channel at room temperature, a low bias current and a wide input voltage range, which enables the ISL28x14 devices to be excellent general purpose op-amps for a wide range of applications.

The ISL28114 is available in the SC70-5 and SOT23-5 packages, the ISL28214 is in the MSOP8, SO8 and SOT23-8 packages, and the ISL28414 is in the TSSOP14, SOIC14 packages. All devices operate over the extended temperature range of -40°C to +125°C.

Features

- Low Current Consumption 390 μ A
- Wide Supply Range 1.8V to 5.5V
- Gain Bandwidth Product 5MHz
- Input Bias Current 20pA, Max.
- Operating Temperature Range -40°C to +125°C
- Packages
 - ISL28114 (Single) SC70-5, SOT23-5
 - ISL28214 (Dual) MSOP8, SO8, SOT23-8
 - ISL28414 (Quad) SOIC14, TSSOP14

Applications

- Power Supply Control/Regulation
- Process Control
- Signal Ban/Buffers
- Active Filters
- Current Shunt Sensing
- Trans-impedance Amp

SINGLE-SUPPLY, LOW-SIDE CURRENT SENSE AMPLIFIER

Applications Information

Functional Description

The ISL28114, ISL28214 and ISL28414 are single dual and quad, CMOS rail-to-rail input, output (RRIO) micropower operational amplifiers. They are designed to operate from single supply (1.8V to 5.5V) or dual supply ($\pm 0.9V$ to $\pm 2.75V$). The parts have an input common mode range that extends 100mV above and below the power supply voltage rails. The output stage can swing to within 15mV of the supply rails with a 10k Ω load.

Input ESD Diode Protection

All input terminals have internal ESD protection diodes to both positive and negative supply rails, limiting the input voltage to within one diode beyond the supply rails. For applications where the input differential voltage is expected to exceed 0.5V, an external series resistor must be used to ensure the input currents never exceed 20mA (see Figure 19).

FIGURE 19. INPUT ESD DIODE CURRENT LIMITING

Output Phase Reversal

Output phase reversal is a change of polarity in the amplifier transfer function when the input voltage exceeds the supply voltage. The ISL28114, ISL28214 and ISL28414 are immune to output phase reversal, even when the input voltage is 1V beyond the supplies.

Unused Channels

If the application requires less than all amplifiers one channel, the user must configure the unused channel(s) to prevent it from oscillating. The unused channel(s) will oscillate if the input and output pins are floating. This will result in higher than expected supply currents and possible noise injection into the channel being used. The proper way to prevent this oscillation is to short the output to the inverting input and ground the positive input (as shown in Figure 20).

FIGURE 20. PREVENTING OSCILLATIONS IN UNUSED CHANNELS

Power Dissipation

It is possible to exceed the +125°C maximum junction temperatures under certain load, power supply conditions and ambient temperature conditions. It is therefore important to calculate the maximum junction temperature (T_{JMAX}) for all applications to determine if power supply voltages, load conditions, or package type need to be modified to remain in the safe operating area. These parameters are related using Equation 1:

$$T_{JMAX} = T_{MAX} + \theta_{JA} \times PD_{MAXTOTAL} \quad (EQ. 1)$$

where:

- $PD_{MAXTOTAL}$ is the sum of the maximum power dissipation of each amplifier in the package (PD_{MAX})
- PD_{MAX} for each amplifier can be calculated using Equation 2:

$$PD_{MAX} = V_S \times I_{qMAX} + (V_S - V_{OUTMAX}) \times \frac{V_{OUTMAX}}{R_L} \quad (EQ. 2)$$

where:

- T_{MAX} = Maximum ambient temperature
- θ_{JA} = Thermal resistance of the package
- PD_{MAX} = Maximum power dissipation of 1 amplifier
- V_S = Total supply voltage
- I_{qMAX} = Maximum quiescent supply current of 1 amplifier
- V_{OUTMAX} = Maximum output voltage swing of the application
- R_L = Load resistance

ISL28114, ISL28214 and ISL28414 SPICE Model

Figure 21 shows the SPICE model schematic and Figure 22 shows the net list for the SPICE model. The model is a simplified version of the actual device and simulates important AC and DC parameters. AC parameters incorporated into the model are: 1/f and flatband noise, Slew Rate, CMRR, Gain and Phase. The DC parameters are IOS, total supply current and output voltage swing. The model uses typical parameters given in the "Electrical Specifications" Table beginning on page 4. The AVOL is adjusted for 90dB with the dominate pole at 125Hz. The CMRR is set 72dB, $f = 80kHz$. The input stage models the actual device to present an accurate AC representation. The model is configured for ambient temperature of +25°C.

Figures 23 through 30 show the characterization vs simulation results for the Noise Voltage, Closed Loop Gain vs Frequency, Large Signal 5V Step Response and CMRR and Open Loop Gain Phase.

Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to Web to make sure you have the latest Rev.

DATE	REVISION	CHANGE
October 26, 2012	FN6800.8	Added SOT23-8 package on page 1 to description and features. Ordering Information on page 2 - Added ISL28214FHZ parts and Note 5 reference. Added Lead Finish Note to Ordering information for 8 LD SOT-23 parts. Thermal Information on page 4 - Added 8 LD SOT-23 package with Tja and Tjc Added P8.064 POD on page 23.
April 13, 2012	FN6800.7	Changed the low supply current in "Features" and description on page 1 from 360µA to 390µA. Removed ISL28114FEV1Z-T7 Coming Soon parts from "Ordering Information" on page 2. Removed applicable pinout from page 2. On page 4, changed MIN/MAX limits for "VOS" at 25°C from -5/5mV to -4/4mV. On page 4, changed MIN/MAX limits for "VOS" at -40°C to 125°C from -6/6mV to -5/5mV. On page 4, changed "TCVOS" TYP from 2µV/°C to 5µV/°C. On page 4, changed MAX limit for "I _S " MAX at 25°C from 360µA to 390µA. On page 4, changed MAX limit for "I _S " MAX at -40°C to 125°C from 400µA to 475µA. Revised Figure 8, "FREQUENCY RESPONSE vs CLOSED LOOP GAIN," on page 7. Revised Figure 11, "GAIN vs FREQUENCY vs C _L ," on page 7. Revised Figure 18, "% OVERSHOOT vs LOAD CAPACITANCE, VS = ±2.5V," on page 8.
January 3, 2012	FN6800.6	Revised "SPICE SCHEMATIC" on page 11 and "SPICE NET LIST" on page 12.
May 18, 2011	FN6800.5	- On page 3, Pin Descriptions: Circuit 3 diagram, removed anti-parallel diodes from the IN+ to IN- terminals. - On page 4, Absolute Maximum Ratings: changed Differential Input Voltage from "0.5V" to "V- - 0.5V to V+ + 0.5V" - On page 4, updated CMRR and PSRR parameters in Electrical Specifications table with test condition specifying -40°C to 125°C typical parameter. - On page 5, updated Note 8, referenced in MIN and MAX column headings of Electrical Specifications table, from "Parameters with MIN and/or MAX limits are 100% tested at +25°C, unless otherwise specified. Temperature limits established by characterization and are not production tested." to new standard "Compliance to datasheet limits is assured by one or more methods: production test, characterization and/or design." - On page 9, under "Input ESD Diode Protection," removed "They also contain back to-back diodes across the input terminals." Removed "Although the amplifier is fully protected, high input slew rates that exceed the amplifier slew rate (±2.5V/µs) may cause output distortion." - On page 9, Figure 19: updated circuit schematic by removing back-to-back input protection diodes. - On page 11 replaced SPICE schematic (Figure 21) - On page 12 replaced SPICE Netlist (Figure 22) - On page 13 replaced Figure 24 - On page 14 replaced Figure 32
September 23, 2010	FN6800.4	Added new SC70 pinout package extension as follows: Added to Related Literature on page 1 "See AN1547 for "ISL28414TSSOPEVAL1Z Evaluation Board User's Guide". Added to ordering information ISL28114FEV1Z-T7 and ISL28114FEV1Z-T7A and Evaluation boards. Added to Pin Configurations new pinout for ISL28114FEV1Z. Added in Pin Descriptions ISL28114FEV1Z SC70 pin description column.
July 28, 2010		Changed Note 7 on page 4 from "For θ_{JC} , the "case temp" location is the center of the exposed metal pad on the package underside." to "For θ_{JC} , the "case temp" location is taken at the package top center."
May 13, 2010		Added "Related Literature" on page 1. Changed package outline drawing from MDP0038 to P5.064A on page 2 and page 18. MDP0038 package contained 2 packages for both the 5 and 6 Ld SOT-23. MDP0038 was obsoleted and the packages were separated and made into 2 separate package outline drawings; P5.064A and P6.064A. Changes to the 5 Ld SOT-23 were to move dimensions from table onto drawing, add land pattern and add JEDEC reference number. Added Note 5 to "Ordering Information" on page 2.
December 16, 2009	FN6800.3	Removed "Coming Soon" from MSOP package options in the "Ordering Information" on page 2. Updated the Theta JA for the MSOP package option from 170°C/W to 180°C/W on page 4.

Revision History (Continued)

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to Web to make sure you have the latest Rev. (Continued)

DATE	REVISION	CHANGE
November 17, 2009	FN6800.2	Removed "Coming Soon" from SC70 and SOT-23 package options in the "Ordering Information" on page 2.
November 12, 2009	FN6800.1	Changed theta Ja to 250 from 300. Added license statement (page 10) and reference in spice model (page 12).
October 23, 2009	FN6800.0	Initial Release

About Intersil

Intersil Corporation is a leader in the design and manufacture of high-performance analog, mixed-signal and power management semiconductors. The company's products address some of the fastest growing markets within the industrial and infrastructure, personal computing and high-end consumer markets. For more information about Intersil or to find out how to become a member of our winning team, visit our website and career page at www.intersil.com.

For a complete listing of Applications, Related Documentation and Related Parts, please see the respective product information page. Also, please check the product information page to ensure that you have the most updated datasheet: [ISL28114](#), [ISL28214](#), [ISL28414](#)

Rev. 3 7/07

NOTES:

1. Dimensioning and tolerances per ASME Y14.5M-1994.
2. Package conforms to EIAJ SC70 and JEDEC MO-203AA.
3. Dimensions D and E1 are exclusive of mold flash, protrusions, or gate burrs.
4. Footlength L measured at reference to gauge plane.
5. "N" is the number of terminal positions.
6. These Dimensions apply to the flat section of the lead between 0.08mm and 0.15mm from the lead tip.
7. Controlling dimension: MILLIMETER. Converted inch dimensions are for reference only.

Package Outline Drawing

5 LEAD SMALL OUTLINE TRANSISTOR PLASTIC PACKAGE

Rev 0, 2/10

NOTES:

1. Dimensions are in millimeters.
Dimensions in () for Reference Only.
2. Dimensioning and tolerancing conform to ASME Y14.5M-1994.
3. Dimension is exclusive of mold flash, protrusions or gate burrs.
4. Foot length is measured at reference to gauge plane.
5. This dimension is measured at Datum "H".
6. Package conforms to JEDEC MO-178AA.

Package Outline Drawing

M8.15E

8 LEAD NARROW BODY SMALL OUTLINE PLASTIC PACKAGE

Rev 0, 08/09

NOTES:

1. Dimensions are in millimeters.
Dimensions in () for Reference Only.
2. Dimensioning and tolerancing conform to AMSE Y14.5m-1994.
3. Unless otherwise specified, tolerance : Decimal ± 0.05
4. Dimension does not include interlead flash or protrusions.
Interlead flash or protrusions shall not exceed 0.25mm per side.
5. The pin #1 identifier may be either a mold or mark feature.
6. Reference to JEDEC MS-012.
