

Low-Voltage, CMOS Analog Multiplexers/Switches with Enable Inputs and Address Latching

General Description

The MAX4530/MAX4531/MAX4532 are low-voltage, CMOS analog ICs configured as an 8-channel multiplexer (mux) (MAX4530), two 4-channel muxes (MAX4531), and three single-pole/double-throw switches (MAX4532). These devices are pin compatible with the industry-standard 74HC4351/74HC4352/74HC4353. All devices have two complementary switch-enable inputs and address latching.

The MAX4530/MAX4531/MAX4532 operate from a single supply of +2V to +12V, or from dual supplies of $\pm 2V$ to $\pm 6V$. On-resistance (150Ω max) is matched between switches to 8Ω max. Each switch can handle rail-to-rail analog signals. Off-leakage current is only 1nA at $T_A = +25^\circ\text{C}$ and 50nA at $T_A = +85^\circ\text{C}$.

All digital inputs have 0.8V and 2.4V logic thresholds, ensuring both TTL- and CMOS-logic compatibility when using $\pm 5V$ or a single +5V supply.

Applications

Battery-Operated Equipment
Data Acquisition
Test Equipment
Avionics
Networking
ATE Equipment
Audio-Signal Routing

Features

- ◆ Pin Compatible with 74HC4351/74HC4352/74HC4353
- ◆ $\pm 2.0V$ to $\pm 6V$ Dual Supplies
 $+2.0V$ to $+12V$ Single Supply
- ◆ 75Ω Signal Paths with $\pm 5V$ Supplies
 150Ω Signal Paths with +5V Supply
- ◆ Rail-to-Rail® Signal Handling
- ◆ t_{ON} and $t_{OFF} = 150ns$ and $120ns$ at $\pm 4.5V$
- ◆ $< 1\mu W$ Power Consumption
- ◆ $> 2kV$ ESD Protection per Method 3015.7
- ◆ TTL/CMOS-Compatible Inputs
- ◆ Small, 20-Pin SSOP/SO/DIP Packages

Ordering Information

PART	TEMP. RANGE	PIN-PACKAGE
MAX4530CPP	0°C to $+70^\circ\text{C}$	20 Plastic DIP
MAX4530CWP	0°C to $+70^\circ\text{C}$	20 SO
MAX4530CAP	0°C to $+70^\circ\text{C}$	20 SSOP
MAX4530C/D	0°C to $+70^\circ\text{C}$	Dice*

Pin Configurations

Low-Voltage, CMOS Analog Multiplexers/Switches with Enable Inputs and Address Latching

ABSOLUTE MAXIMUM RATINGS

Voltages Referenced to V-

V+-0.3 to +13V

Voltage into Any Terminal (Note 1)

.....-0.3 to (V+ + 0.3V) or $\pm 20\text{mA}$ (whichever occurs first)

Continuous Current into Any Terminal $\pm 20\text{mA}$

Peak Current, NO, NC, or COM₁

(pulsed at 1ms, 10% duty cycle)..... $\pm 40\text{mA}$

ESD per Method 3015.7>2000V

Continuous Power Dissipation ($T_A = +70^\circ\text{C}$)

20-Pin Plastic DIP (derate 11.11mW/ $^\circ\text{C}$

above $+70^\circ\text{C}$).....889mW

20-Pin SO (derate 10.00mW/ $^\circ\text{C}$ above $+70^\circ\text{C}$).....800mW

20-Pin SSOP (derate 8.00mW/ $^\circ\text{C}$ above $+70^\circ\text{C}$)640mW

Operating Temperature Ranges

MAX453_C_P 0°C to $+70^\circ\text{C}$

MAX453_E_P -40°C to $+85^\circ\text{C}$

Storage Temperature Range -65°C to $+150^\circ\text{C}$

Note 1: Voltages exceeding V+ or V- on any signal terminal are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS—Dual Supplies

(V+ = $\pm 5\text{V} \pm 10\%$, V- = $-5\text{V} \pm 10\%$, GND = 0, V_{ADD_H} = V_{EN_H} = V_{LE} = 2.4V, V_{ADD_L} = V_{EN_L} = 0.8V, $T_A = T_{\text{MIN}}$ to T_{MAX} , unless otherwise noted.)

Note 2: The algebraic convention, where the most negative value is a minimum and the most positive value a maximum, is used in this data sheet.

Note 3: Guaranteed by design.

Note 4: $\Delta R_{ON} = R_{ON(max)} - R_{ON(min)}$.

Note 5: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal ranges, i.e., V_{NO} = 3V to 0V and 0V to -3V.

Note 6: Leakage parameters are 100% tested at maximum-rated hot-operating temperature, and guaranteed by correlation at T_A = +25°C.

Note 7: Worst-case isolation is on channel 4 because of its proximity to the COM pin. Off isolation = 20log V_{COM} / V_{NO}, V_{COM} = output, V_{NO} = input to off switch.

Note 8: Leakage testing at single supply is guaranteed by correlation testing with dual supplies.

20	20	20	V+	Positive Analog and Digital Supply-Voltage Input

NO_, NC_, and COM_ pins are identical and interchangeable. Either may be considered as an input or output; signals pass equally well in both directions.

Low-Voltage, CMOS Analog Multiplexers/Switches with Enable Inputs and Address Latching

Applications Information

Power-Supply Considerations

Overview

The MAX4530/MAX4531/MAX4532 construction is typical of most CMOS analog switches. They have three supply pins: V+, V-, and GND. V+ and V- drive the internal CMOS switches and set the limits of the analog voltage on any switch. Reverse ESD-protection diodes are internally connected between each analog-signal pin and both V+ and V-. One of these diodes conducts if any analog signal exceeds V+ or V-. During normal operation, these and other reverse-biased ESD diodes leak, forming the only current drawn from V+ or V-.

Virtually all of the analog leakage current comes from the ESD diodes. Although the ESD diodes on a given signal pin are identical and therefore fairly well balanced, they are reverse-biased differently. Each is biased by either V+ or V- and the analog signal. This means their leakages vary as the signal varies. The difference in the two diode leakages to the V+ and V- pins constitutes the analog-signal-path leakage current. All analog leakage current flows between each pin and one of the supply terminals, not to the other switch terminal. For this reason, both sides of a given switch can show leakage currents of either the same or opposite polarity.

The analog-signal paths and GND are not connected.

V+ and GND power the internal logic and logic-level translators, and set both the input and output logic limits. The logic-level translators convert the logic levels into switched V+ and V- signals to drive the analog signals' gates. This drive signal is the only connection between the logic supplies and signals and the analog supplies. V+ and V- have ESD-protection diodes to GND.

The logic-level thresholds are TTL/CMOS compatible when V+ = +5V. As V+ rises, the threshold increases slightly, so when V+ reaches +12V, the threshold is about 3.1V—above the TTL guaranteed, high-level minimum of 2.8V, but still compatible with CMOS outputs.

Bipolar Supplies

The MAX4530/MAX4531/MAX4532 operate with bipolar supplies between $\pm 2.0\text{V}$ and $\pm 6\text{V}$. The V+ and V- supplies need not be symmetrical, but their sum cannot exceed the +13V absolute maximum rating.

Single Supply

The MAX4530/MAX4531/MAX4532 operate from a single supply between +2V and +12V when V- is connected to GND. All of the bipolar precautions must be observed. At room temperature, they actually work with a single supply at, near, or below +1.7V, although as supply voltage decreases, switch on-resistance and switching times become very high.

High-Frequency Performance

In 50Ω systems, signal response is reasonably flat up to 50MHz (see *Typical Operating Characteristics*). Above 20MHz, the on response has several minor peaks that are highly layout-dependent. The problem is not in turning the switch on, but in turning it off. The off-state switch acts like a capacitor and passes higher frequencies with less attenuation. At 10MHz, off isolation is about -65dB in 50Ω systems, becoming worse (approximately 20dB per decade) as frequency increases. Higher circuit impedances also make off isolation worse. Adjacent channel attenuation is about 3dB above that of a bare IC socket, and is due entirely to capacitive coupling.

Low-Voltage, CMOS Analog Multiplexers/Switches with Enable Inputs and Address Latching

Test Circuits/Timing Diagrams

Figure 1. Address Transition Time

Low-Voltage, CMOS Analog Multiplexers/Switches with Enable Inputs and Address Latching

Test Circuits/Timing Diagrams (continued)

MAX4530/MAX4531/MAX4532

Figure 2. Enable Switching Time

Low-Voltage, CMOS Analog Multiplexers/Switches with Enable Inputs and Address Latching

Test Circuits/Timing Diagrams (continued)

Figure 3. Break-Before-Make Interval

Low-Voltage, CMOS Analog Multiplexers/Switches with Enable Inputs and Address Latching

Test Circuits/Timing Diagrams (continued)

Figure 4. Charge Injection

Figure 5. Off Isolation, On Loss, and Crosstalk

Figure 6. NO/COM Capacitance

Low-Voltage, CMOS Analog Multiplexers/Switches with Enable Inputs and Address Latching

Test Circuits/Timing Diagrams (continued)

V- = 0V FOR SINGLE-SUPPLY OPERATION.
REPEAT TEST FOR EACH SECTION.

Figure 7. Setup and Hold Times, Minimum $\overline{LE}$ Width

Low-Voltage, CMOS Analog Multiplexers/Switches with Enable Inputs and Address Latching

Truth Table/Switch Programming

$\overline{LE}$	EN2	EN1	ADDRESS BITS			ON SWITCHES		
			ADDC*	ADDB	ADDA	MAX4530	MAX4531	MAX4532
0	1	0	X	X	X	Last address	Last address	Last address
X	0	X	X	X	X	All switches open	All switches open	All switches open
X	X	1	X	X	X	All switches open	All switches open	All switches open
1	1	0	0	0	0	COM-NO0	COMA-NO0A, COMB-NO0B	COMA-NCA, COMB-NCB, COMC-NCC
1	1	0	0	0	1	COM-NO1	COMA-NO1A, COMB-NO1B	COMA-NOA, COMB-NCB, COMC-NCC
1	1	0	0	1	0	COM-NO2	COMA-NO2A, COMB-NO2B	COMA-NCA, COMB-NOB, COMC-NCC
1	1	0	0	1	1	COM-NO3	COMA-NO3A, COMB-NO3B	COMA-NOA, COMB-NOB, COMC-NCC
1	1	0	1	0	0	COM-NO4	COMA-NO0A, COMB-NO0B	COMA-NCA, COMB-NCB, COMC-NOC
1	1	0	1	0	1	COM-NO5	COMA-NO1A, COMB-NO1B	COMA-NOA, COMB-NCB, COMC-NOC
1	1	0	1	1	0	COM-NO6	COMA-NO2A, COMB-NO2B	COMA-NCA, COMB-NOB, COMC-NOC
1	1	0	1	1	1	COM-NO7	COMA-NO3A, COMB-NO3B	COMA-NOA, COMB-NOB, COMC-NOC

X = Don't Care *ADDC not present on MAX4531.

Note: NO_ and COM_ pins are identical and interchangeable. Either may be considered an input or an output; signals pass equally well in either direction. $\overline{LE}$ is independent of EN1 and EN2.

MAX4530/MAX4531/MAX4532

Low-Voltage, CMOS Analog Multiplexers/Switches with Enable Inputs and Address Latching

Ordering Information (continued)

PART	TEMP. RANGE	PIN-PACKAGE
MAX4530EPP	-40°C to +85°C	20 Plastic DIP
MAX4530EWP	-40°C to +85°C	20 SO
MAX4530EAP	-40°C to +85°C	20 SSOP
MAX4531 CPP	0°C to +70°C	20 Plastic DIP
MAX4531CWP	0°C to +70°C	20 SO
MAX4531CAP	0°C to +70°C	20 SSOP
MAX4531C/D	0°C to +70°C	Dice*
MAX4531EPP	-40°C to +85°C	20 Plastic DIP
MAX4531EWP	-40°C to +85°C	20 SO
MAX4531EAP	-40°C to +85°C	20 SSOP
