

COMX-P1022

Module based on the COM Express Form Factor

■ Embedded Computing for
Business-Critical Continuity™

QorIQ processing power on a module for rapid deployment across diverse I/O requirements

- Freescale dual-core QorIQ™ P1022 processor
- Two cores running at 1.067 GHz
- Supports up to 2GB DDR3 SO-DIMM
- 95 mm x 95 mm compact footprint
- DVI and LVDS Video output
- I²C Audio
- Ultra low power processing module (< 7 W)

The COMX-P1022 small form factor module brings the Freescale QorIQ™ P1022 dual-core processor onto a module that incorporates the mechanical features and dimension of the COM Express specification.

The QorIQ P1022 processor is effectively a System-on-Chip device with a range of features including USB, PCI Express, Gigabit Ethernet, memory controller, general purpose I/O and SD/MMC flash controller. The overall dimensions of the COMX-P1022 are 95 mm x 95 mm following the definition of a Compact COM Express module and this enables it to be fitted within a very wide range of enclosures when mounted on a customer carrier. COMX-P1022 is an off-the-shelf processor solution that is backed by one of the world's leading embedded computing companies for peace of mind and fast time to market by isolating you from the complexities of the high speed processor, memory and graphics devices. To ease the development cycle further, Emerson supplies a development carrier card as well as a carrier designer's guide and other resources.

By combining the tried and tested Power Architecture processor core along with a considerable range of on module I/O, the COMX-P1022 is suitable for a range of applications including programmable automation controllers, security gateways, civil aeronautics, renewable energy controllers, test and measurement and other embedded devices. The COMX-P1022 is supported by a range of real-time operating systems and development tools.
