Micro Commercial Components
20736 Marilla Street Chatsworth
CA 91311
Phone: (818) 701-4933
Fax: (818) 701-4939

**1N5988
THRU
1N6016**

Features

- Popular DO-35 Package---Small and Rugged
- Double Slug Construction
- Constructed with an Oxide Passivated All Diffused Die

**500 mW
Zener Diode
3.3 to 47 Volts**

Maximum Ratings

- Operating Temperature: -55°C to +150°C
- Storage Temperature: -55°C to +150°C
- DC Power Dissipation: 500mW
- Derate above 50°C: 3.33mW/°C
- Forward voltage @ 100mA: 1.5V

Note 1.

Zener impedance is derived from the 1KHz AC voltage which results when an AC current having an rms value equal to 10%

of DC zener current (I_{ZT} or I_{ZK}) is superimposed on I_{ZT} or I_{ZK} .

Note 2.

Voltage measurements to be performed 20 seconds after application of the DC test current.

Note 3.

The maximum zener current I_{zm} shown is for the nominal voltages. The following formula can be used to determine the worst

case current for any tolerance device.

$$I_{zm} = P / V_{zm}$$

Where V_{zm} is the high end of the voltage tolerance specified and P is the rated power of the device.

Note 4.

The type number listed indicates a 20% tolerance. For 10% tolerance and suffix A; for 5% tolerance, add suffix B; for 2% tolerance add suffix C; for 1% tolerance, add suffix D.
