

Innovative and Powerful Features!

- ◆ True industrial grade design
- ◆ Rugged metal case for harsh industrial environments
- ◆ For worldwide use – Autoselect input and international safety approvals
- ◆ ATEX and IECEx certification (opt. EX)
- ◆ Model TSP 090-124N meets NEC class 2
- ◆ Industrial operating temperature range: –25 °C to +70 °C
- ◆ Variable output voltage
- ◆ Indefinite short circuit, overvoltage and overtemperature protection
- ◆ Power OK signal
- ◆ Remote On/Off
- ◆ Shock and vibration proof
- ◆ Wall mounting (opt.)
- ◆ Redundancy module
- ◆ Buffer module for power backup
- ◆ Battery controller module
- ◆ 3-year product warranty

The TRACOPOWER TSP series is a new generation of high performance DIN-rail mount power supplies designed to work reliably even under difficult factory floor conditions. A high power reserve guarantees reliable start-up of loads with high in-rush currents. Excellent electrical specifications and high immunity against electrical disturbances makes these compact modules the best choice to power sensitive loads in industrial process control systems, machine tools or other demanding industrial applications. Easy installation with detachable screw terminal block and snap-on mounting on DIN-rails.

For system applications all models offer a DC-OK signal and external shut down function. Redundant operation with true power sharing is available as an option. With another option these power supplies can be extended to build a perfect DC-UPS system with automatic battery management.

The TSP series power supplies complies with the latest safety and EMC standards for industrial environments and are also available with ATEX certification for applications in hazardous locations (class I, division 2)

TSP-REM360 Redundancy Module

With this module and two power supplies of the TSP series (of same type) a highly reliable, truly redundant power system can be configured without any additional components. This module enforces the equivalent sharing of the output current by each power supply. The system is fully redundant and provides output power even if one power supply has completely failed e.g. by short circuit on the output. In the event of either power supply failing or being disconnected, the second unit will automatically supply the full current to the load. The redundancy of the system is monitored and if lost, indicated by an alarm output. The inputs are hot swappable and can be loaded up to 15 A each.

TSP-BFM24 Buffer Module

The TSP-BFM24 buffer module will hold the output voltage of a 24 VDC power supply after brown outs or voltage dips of up to ten full 50 Hz cycles. During this buffer period no deterioration of the 24 VDC output voltage will occur. For many applications this buffer module is an ideal and cost effective alternative to a battery based backup system. The buffer module consists of a large bank of capacitors. When the power supply is switched on, the buffer capacitors will be charged. This will take approximately 30 second and an opto-coupler signal indicates the "READY" condition. When a power fail occurs, the capacitor bank is discharged, maintaining the output of the buffer module at its nominal voltage. This condition is indicated by an "POWER FAIL" signal. The hold up time is typically 200 ms at 25 A and 4 seconds typically at 1,2 A. After 4 seconds the buffer device will switch off the output voltage. The operating modes of the module are also indicated by a LED on the front panel also. The major advantage of this buffer solution is, that it is fully maintenance free and its storage capability does not deteriorate over the live time of the product.

TSP-BCM24 Battery Controller Module

This module provides a professional battery management system to charge and monitor an external lead-acid battery. Together with a power supply of the TSP series, a perfect DC-UPS system can be configured. The connected battery will be charged and held in charged mode by the power supply. In the event of a mains power failure the battery will supply the output power until the battery is discharged. As a consequence, the output voltage of the system is equivalent to the battery voltage. To avoid overcharging the battery, an external temperature sensor adjusts the battery voltage automatically to the required end of charge voltage. This can extend the battery life.

The battery is protected against deep discharge. Mains power and battery status are monitored regularly and failures indicated by corresponding LED's and alarm outputs. The module also provides an external On/Off input to switch-off both, power supply and battery.

TSP–BAT Battery Pack

The TSP battery packs are designed to build, in connection with the TSP-BCM battery controller module, a complete DC-UPS system. The entire range utilizes 12 V maintenance free VRLA (valve regulated lead acid) batteries made by PANASONIC. These are not spillable lead gel type batteries. Two 12 V batteries are connected in series and assembled into a stainless steel enclosure, with integrated connector and connection cable.
