CRUSADER GS200

The new GS 200 Toolcase represents the ultimate in toolcase technology with a comprehensive package of improvements. Heavy duty ABS shell on Tri-Frame section for maximum strength. Chrome drawbolt action locks secure the closure whilst FOUR heavy duty hinges reinforce the opening. A reinforcement plate locks lid to base frame section to ensure frame will never "De-locate" in use, no matter what the weight carried.

The main innovative features however are the gas strut supports and universal base insert with dividers.

Powerful gas struts open the lid of the case and ensure that it never drops whilst in use.

The universal base insert provides a flexibility never before known in a tool case. Supplied with six dividers the case can be laid out in almost countless permutations.

The tool pallet board in the lid offers a variety of pockets and loops and alternative or additional boards may be ordered.

There is also a hacksaw support facility integral with the lid interior that can facilitate from the smallest to the largest frame hacksaws available.

Not so much a toolcase - More a portable workshop.
