MOELLER 

We keep power under control.

The New Control Circuit Devices RMQ-Titan® are in Great Shape

New for ATEX use
www.moeller.net/atex1

Modern styling has been combined with an optimum range of functions, – ideal for use at machines and on panels. The ergonomically shaped button elements are matched to the shape of a fingertip for even more comfortable operation.

Control circuit devices RMQ-Titan emit light non-stop for over 100 000 hours. The LED elements in RMQ-Titan do not then suddenly fail, however, the strength of their light is simply reduced. Special lenses and coloured LEDs offer enduring reliability at a very attractive price. Emergency-Stop actuators are now illuminated as well. This safety component is thus clearly visible even in dark rooms and a separate indicator light is not required.

Customised laser inscription

Whether at the control desk, in suspended operator panels or in the control cabinet, RMQ-Titan is number one when it comes to control circuit devices for machine and panel building. As well as the attractive and ergonomic design, the flexibility and versatility of the range always make it the ideal solution. All button plates, indicator lights and legend plates can be provided with abrasion resistant laser inscriptions of texts and symbols as required.

Optimum degree of protection for safety

Apart from the acoustic indicator, all RMQ-Titan front elements come with protection to at least IP67, thus already providing virtually unlimited scope for applications. Pushbutton actuators and indicator lights even offers protection to IP 69K! They can therefore be cleaned safely with high-pressure and steam cleaners – a key benefit in applications where cleanliness and hygiene are important requirements.

Adapted to the location

Mushroom actuators with a large actuation area offer more safety thanks to their conspicuous design and their ability to even be actuated with gloved hands. Illuminated Emergency-Stop buttons and buzzers ensure reliable signal indication even in dark rooms. Special diaphragms are also available for protecting buttons against dust, flour or cement.

Complete units

Ready-to-use complete units are available for standard solutions such as ON, ON/OFF, Emergency-Stop with and without a keyswitch etc. They can be supplied for front mounting and in surface mounting enclosures. The foot and palm switch FAK offers special features. Created for particularly rugged applications with extremely high protection to IP 69 K, this device stands out with its impressive design, and is often seen in TV quiz shows.

Always well enclosed

The surface mounting enclosure for eight control circuit devices RMQ16 with protection to IP65 is specially designed for industrial applications. The surface mounting enclosure in the RMQ-Titan range even provides protection to IP66 with up to 6 mounting locations.

Finger identification

Lost your keys, misplaced your ID card or forgotten your PIN code? In addition to the annoyance caused by these everyday problems, the "conventional" access systems cost companies a vast amount in administration costs. Fingerprints on the other hand are unique and cannot be lost. The devices detect the temperature differences between the furrows of the finger, and can thus identify each finger accurately. The M22-ESA meets all the requirements for easy-to-use, reliable and flexible access control.

The ID Card in Your Fingertip

The Fingerprint System M22-ESA

xCommand

Lost your keys, misplaced your ID card or forgotten your PIN code? In addition to the annoyance caused by these everyday problems, the "conventional" access systems cost companies a vast amount in administration costs. The fingerprint system M22-ESA which acts as an electronic master lock system for machines, systems and buildings, fully eliminates these administrative costs. Fingerprints are unique, cannot be lost and can be precisely assigned to a particular person. The M22-ESA fulfils all the demands for a simple, reliable and flexible access control system.

Ø 22.5 mm

Easy to fit:

1. The M22-ESA requires just as the RMQ-Titan series devices, a standard 22.5mm diameter fitting aperture.
2. Fit the operating panel using the patented Moeller tool.
3. Simple fitting of the fingerprint system M22-ESA on the operating panel.
4. The fingerprint system is fitted.

Simply more secure

The security benefits of the M22-ESA series are based on the uniqueness of biometric features. A person's fingerprint does not change in the course of his lifetime just as the characteristics of his fingerprint cannot be transferred to third parties. Different persons simply don't have the same fingerprint; even the fingerprints of twins are unique. Administrative costs which result from loss or forgetfulness with conventional access control systems are completely eliminated. The thermal line sensor of the M22-ESA recognises authorized persons via the minutiae of the fingerprint. By the limitation of the evaluation area (possibility of savings just a certain section of the fingerprint) the imitation is made even more difficult. The system saves up to 100 different fingerprints.

Sensor complete

Multi-function display

MFD-80-B

Communication module, 24 V DC

MFD-CP4

115/230 V AC
MFD-AC-CP4-800

Fast commissioning:

1. The user selects the Learn menu option on the MFD-Titan

2. The MFD-Titan recognizes the fingerprint M22-ESA and requests pulling the finger across the sensor in order to learn the fingerprint.

3. The **Successful** message on the display of the MFD-Titan indicates that the device has saved the fingerprint and has registered the authorized person.

4. A green LED on the fingerprint reader indicates access authorization. When all access authorized fingerprints are saved, the installer removes the MFD-Titan. Only a single MFD-Titan is required for commissioning of multiple fingerprint systems, which saves costs and time due to easy data storage.

Download free of charge at:

www.moeller.net/fingerprint

Commissioning with the simulation software MFD-CP4-Simulation is an alternative.

Power supply unit, Easy-POW see section Operating and control relays

High Information Density Thanks to Compact Mounting: RMQ 16

xCommand

The control panels of modern machines and plants must be able to convey increasingly complex information, even though the available space is limited. The RMQ16 range of compact control circuit devices provides the solution.

The various front elements can be mounted flush on all four sides, without any gaps. Compared with conventional 22 mm ranges, using RMQ16 devices with their 18 x 18 mm front dimension, achieves three times the information density.

Two sizes of front element:
25 x 25 mm and 18 x 18 mm.
Both sizes use the same,
standard mounting aperture
of 16.2 mm.

System Overview

RMQ16

- 1 Emergency-stop button
- 2 Base plate
- 3 Key switch
- 4 Contact element break (red)
- 5 Illuminated push button
- 6 Contact element make (green)
- 7 Selector switch
- 8 Indicator light
- 9 Push-button
- 10 Button plate/insert label

Label mounts with insert plates offer additional labelling options. Secured via the front elements, both elements are simply bolted on from the rear of the flush mounting plate using a lock nut.

The RMQ 16 control circuit devices range can also be inscribed. The button plates as well as the lenses for the illuminated push buttons and the flat lenses for indicator lights are inscribed by laser (see page 212 for Label Editor information). Thus, even after years of use, the information they provide is still clear and unambiguous. These control circuit devices can be fitted with LEDs instead of filament bulbs. This means no more changing of bulbs, because LED service life equals machine life. The high degree of protection, IP 65, of the front elements ensures safe operation even in harsh environments. This makes RMQ16 ideally suitable for industrial applications.

"Side by side mounting enables well ordered control panels on the smallest possible space."

Clear Signals – Quick Reactions

A clear picture at a glance

Signal towers SL provide visual and audible signals of machine states, easily identifiable even at a distance. Signals are distinguishable as continuous light, flashing light, strobe light or acoustic indication, enabling their level of importance to be correctly evaluated without delay.

The individual modules can be combined as required, and simply assembled by plugging the bayonet fitting into place and turning slightly.

The individual modules are freely programmable by merely relocating a wire link (jumper) on each module board. This, for example, enables a dangerous machine state to be indicated by a red flashing light backed up at the same time by an audible alarm signal. To achieve this, put the jumpers of both modules in the same position on the module board, irrespective of the module position in the column.

1 Base module

2 Light modules

3 Fixing base

Signal towers SL indicate the machine operating state clearly and unmistakably.

Base module	
IP 54 Black with cover	
Description	Part no.
With screw terminals	SL-B
With Cage Clamp	SL-CB
With connection AS-Interface	SL-B-ASI

Acoustic module		
IP 20		
Operational voltage	Part no. Continuous tone	Part no. Pulsed tone

Xtra Combinations

Xtra Combinations from Moeller offers a range of products and services, enabling the best possible combination options for switching, protection and control in power distribution and automation.

Using Xtra Combinations enables you to find more efficient solutions for your tasks while optimising the economic viability of your machines and systems.

It provides:

- Flexibility and simplicity
- Great system availability
- The highest level of safety

All the products can be easily combined with one another mechanically, electrically and digitally, enabling you to arrive at flexible and stylish solutions tailored to your application – quickly, efficiently and cost-effectively.

The products are proven and of such excellent quality that they ensure a high level of operational continuity, allowing you to achieve optimum safety for your personnel, machinery, installations and buildings.

Thanks to our state-of-the-art logistics operation, our comprehensive dealer network and our highly motivated service personnel in 80 countries around the world, you can count on Moeller and our products every time. Challenge us! We are looking forward to it!

MOELLER

We keep power under control.
