General Description

The SCG2540 is a mixed-signal phase lock loop generating CMOS outputs from an intrinsically low jitter voltage controlled crystal oscillator.

The SCG2540 can lock to one of two possible input reference frequencies at 10 kHz which is selectable using one input select pin.

Further features include an alarm output to indicate Loss of Reference, LOR, or Loss of Lock, LOL. If only one of the references is lost, the unit will disable its phase detector and will signal an alarm, but will not switch reference automatically. If both references are lost, the SCG2540 will enter a Free Run state which will guarantee a 20 ppm accurate output. Additionally, the Free Run mode may be entered manually by applying a high signal to the Force Free Run pin. If the unit is in Free Run mode, the Free Run status pin will be high.

All outputs, except the Oscillator Output, may be put into the tri-state high impedance condition for external testing purposes by applying a high signal to the Reset/Tri-State pin.

The filtered 10 kHz is derived from the oscillator output. The offset between the filtered output and the reference input will change with each reference rearrangement.

The package maximum dimensions are .780" x .830" x .35" on a six layer FR4 board with surface mount pins. Parts are assembled using high temperature solder to withstand surface mount reflow process.

Features

- Phase Locked Output Frequency Control
- Intrinsically Low Jitter Crystal Oscillator
- Two Selectable References @ 10 kHz
- Alarm Output
- Tri-Statable Alarm Outputs and Reference Output
- Force Free Run Function
- Automatic Free Run Operation upon loss of both references
- Input Duty Cycle Tolerant
- 3.3 Volt Power Supply
- Small Size: 0.78" x 0.83" x 0.35" maximum
- Surface Mount, DIL Package

NOTES:

- 1.0 Requires external regulation
- 2.0 Externally selectable via Input Select AB
- 3.0 From a 20 ppm offset in reference frequency
- 4.0 Entry into Free Run doesn't meet requirement for initial 2.33 seconds of self-timing
- 4.1 If the selected reference is removed, system response to the ALARM must be less than 10µs
- 5.0 On alarm assertion, switch references. If alarm is still active, force Free Run

Ordering Information

SCG{XXXX}-{FFF.FFF}{M}

XXXX equals a specific model (2540)

FFF.FFF equals the Oscillator Output frequency (020.48)

M equals MHZ and is added to all part numbers

Example: To order an SCG2540 with an Oscillator Output of 20.48 MHz,
Order part number SCG2540-020.48M

Please contact Connor-Winfield for other frequencies that may be available.
