## High Quality 1080p HD Video for Ultra-Compact Notebooks and Tablets

The OV2720 is the world's first 1/6-inch, native 1080p/30 high-definition (HD) CMOS image sensor designed for notebook, tablet, webcam and video conferencing applications. Built on our proprietary 1.4-micron OmniBSI™ pixel architecture, the OV2720 allows for extremely thin camera modules with a z-height of 3.5 mm, while delivering video conference quality 1080p HD video, making it an ideal choice for the next generation of ultra-thin, HD video-enabled notebooks and tablets.

A native HD sensor, the OV2720 offers optimal performance because it does not suffer from degradation or image artifacts due to scaling or cropping. Instead, native HD enables full field of view video with optimized image quality, sensitivity, color reproduction and clarity. Enabled by OmniBSI architecture, the sensor achieves best-in-class low-light sensitivity of 650 mV/lux-sec. Using a binning feature, OV2720's low-light performance can be

double that of similar-sized VGA sensors, making it an ideal choice for video conferencing and webcam applications.

The OV2720 supports multiple platform architectures and controllers with both parallel and MIPI interfaces. It allows system designers to leverage the same optoelectrical design across various products and multiple market segments to reduce product development time.

Exposure control, white balance and defective pixel canceling are programmable through the SCCB interface. In addition, OmniVision image sensors use proprietary sensor technology to improve image quality by reducing or eliminating common lighting and electrical sources of image contamination, such as fixed pattern noise and smearing to produce a clean, fully stable color image.
