Description

The RHRP3060 is a hyperfast diode with soft recovery characteristics. It has the half recovery time of ultrafast diodes and is silicon nitride passivated ion implanted epitaxial planar construction. These diodes are intended to be used as freewheeling clamping diodes and diodes in a variety of switching power supplies and other power switching applications. Their low stored charge and hyperfast soft recovery minimize ringing and electrical noise in inductive switching circuits reducing power loss in the switching transistors.
