**8A, 400V - 600V Ultrafast Diodes**

### Features

- Ultrafast Recovery Time ( $t_{RR} < 50\text{ns}$ )
- Low Forward Voltage
- Low Thermal Resistance
- Hard Glass Passivation
- Wire-Bonded Construction

### Applications

- General Purpose
- Power Switching Circuits to 100kHz
- Output Rectification in Switching Power Supplies

### Description

MUR840, MUR850, MUR860 and RURP840, RURP850, RURP860 are low forward voltage drop ultrafast recovery rectifiers ( $t_{RR} < 50\text{ns}$ ). They use a glass-passivated ion-implanted, epitaxial construction.

These devices are intended for use as output rectifiers and fly-wheel diodes in a variety of high-frequency pulse-width modulated switching regulators. Their low stored charge and attendant fast reverse-recovery behavior minimize electrical noise generation and in many circuits markedly reduce the turn-on dissipation of the associated power switching transistors.

### Package
