ELECTROSTATIC WARNING

The **STR-P711** board is shipped in protective anti-static packaging. The board must not be subject to high electrostatic potentials. General practice for working with static sensitive devices should be applied when working with this board.

BOARD USE REQUIREMENTS

Cables: The cable you will need depends on the programmer/debugger you use. If you use [ARM-JTAG-EW](#), you will need USB A-B cable, if you use [AVR-JTAG](#), you will need LPT cable; you will also need RS232 cable.

Hardware: Programmer/Debugger [ARM-JTAG-EW](#), [ARM-JTAG](#), or other compatible programming/debugging tool if you work with EW-ARM.

You can use also [ARM-USB-OCD](#), [ARM-USB-TINY](#), ARM-USB-OCD-H, [ARM-USB-TINY-H](#), but we don't offer a project for this board with this programmers.
