DESCRIPTION

The *ISSI* IS62C1024 is a low power, 131,072-word by 8-bit CMOS static RAM. It is fabricated using *ISSI*'s high-performance CMOS technology. This highly reliable process coupled with innovative circuit design techniques, yields higher performance and low power consumption devices.

When $\overline{CE1}$ is HIGH or $\overline{CE2}$ is LOW (deselected), the device assumes a standby mode at which the power dissipation can be reduced by using CMOS input levels.

Easy memory expansion is provided by using two Chip Enable inputs, $\overline{CE1}$ and $\overline{CE2}$. The active LOW Write Enable ($\overline{WE}$) controls both writing and reading of the memory.

The IS62C1024 is available in 32-pin 525-mil plastic SOP and TSOP (type 1) packages.
