

TC4027BP, TC4027BF, TC4027BFN

TC4027B DUAL J-K MASTER-SLAVE FLIP FLOP

TC4027B is J-K master-slave flip-flop having RESET and SET functions.

In the case of J-K made, when the clock input is given with both RESET and SET at "L", the output changes at rising edge of the clock according to the states of J and K.

When SET input is placed at "H", and RESET input is placed at "L", outputs become $Q = "H"$, and $\bar{Q} = "L"$.

When RESET input is placed at "H", and SET input is placed at "L", outputs become $Q = "L"$, and $\bar{Q} = "H"$.

When both of RESET input and SET input are at "H", outputs become $Q = "H"$ and $\bar{Q} = "H"$.

(Note) The JEDEC SOP (FN) is not available in Japan.

● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
