

## High-performance Video Signal Switchers

# Video · Audio Signal Switchers for Car Navigation Car DVD Player

BH7649KS2

No.11066EAT05

### ●Description

BH7649KS2 is built-in video switch, audio switch and isolation amplifier in a single chip.

### ●Features

- 1) Video inputs selector: 7-inputs composite, Video outputs: 2-outputs 75Ω video driver, 2-outputs AMP
- 2) Built in Video gain switch (-6dB / -3dB / 0dB / 3dB)
- 3) Built in Video LPF switch (6.75MHz / Through)
- 4) Built in sag compensation circuit
- 5) Enables two load drivers
- 6) Video driver: Able to be used without load
- 7) Video driver : Able to be used without output coupling capacitor(one load)
- 8) Audio inputs selector: 5-inputs(Lch, Rch), Audio outputs : 2-outputs(Lch, Rch)
- 9) Built in Audio gain switch (0dB / -6dB)
- 10) Built in Audio LPF switch (24kHz / Through)
- 11) Built in MUTE function
- 12) Audio/Video all inputs: Built in isolator function
- 13) Selectable isolator function for different Audio/Video input channels
- 14) Serial control with I<sup>2</sup>C-BUS (I<sup>2</sup>C-BUS is compatible with fast mode of Version2.0)
- 15) Optional Slave address modifications (90H / 92H)

### ●Applications

Car navigation, Car DVD

### ●Absolute maximum ratings (Ta=+25°C)

Parameter	Symbol	Ratings	Unit
Supply voltage VVcc	VVccmax	10	V
Supply voltage AVcc	AVccmax	10	V
Power dissipation	Pd	1900 *1	mW
Input voltage range I <sup>2</sup> C-BUS input (SCL, SDA)	VI2CIN	-0.2 ~ 7.0	V
Input voltage range Video selector, LOGIC (VIN1, VRET1, VIN2, VRET2, VIN3, VRET3, VIN4, VRET4, VIN5, VRET5, VIN6, VRET6, VIN7, VRET7, ADR)	VIN1	-0.2 ~ 5.1	V
Input voltage range Video driver (VDIN1, VDIN2)	VDIN1	-0.2 ~ VVcc+0.2	V
Input voltage range Audio seletor (LIN1, ARET1, RIN1, LIN2, ARET2, RIN2, LIN3, ARET3, RIN3, LIN4, ARET4, RIN4, LIN5, ARET5, RIN5)	VAIN1	-0.2 ~ AVcc+0.2	V
Storage temperature range	Tstg	-55~+125	°C

\*1 When mounting on a 70mm × 70mm × 1.6mm 4-layer glass epoxy board  
Reduced by 19mW/°C at Ta = +25°C or higher

### ●Operating conditions

Parameter	Symbol	Ratings	Unit
Supply voltage VVcc	VVcc	+7.5 ~ +9.5	V
Supply voltage AVcc	AVcc	+7.5 ~ +9.5	V
Operating temperature range	Topr	-40 ~ +85	°C

\* This product is not designed for protection against radioactive rays.

●Electric characteristic (Unless otherwise specified, Ta=+25°C, VVcc=8.5V, AVcc=8.5V)

Parameter			Symbol	Limits			Unit	Conditions
				Min.	Typ.	Max.		
CHIP	Circuit current1		ICC1	-	34	48	mA	No signal(VIDEO)

## ●Evaluation board circuit diagram

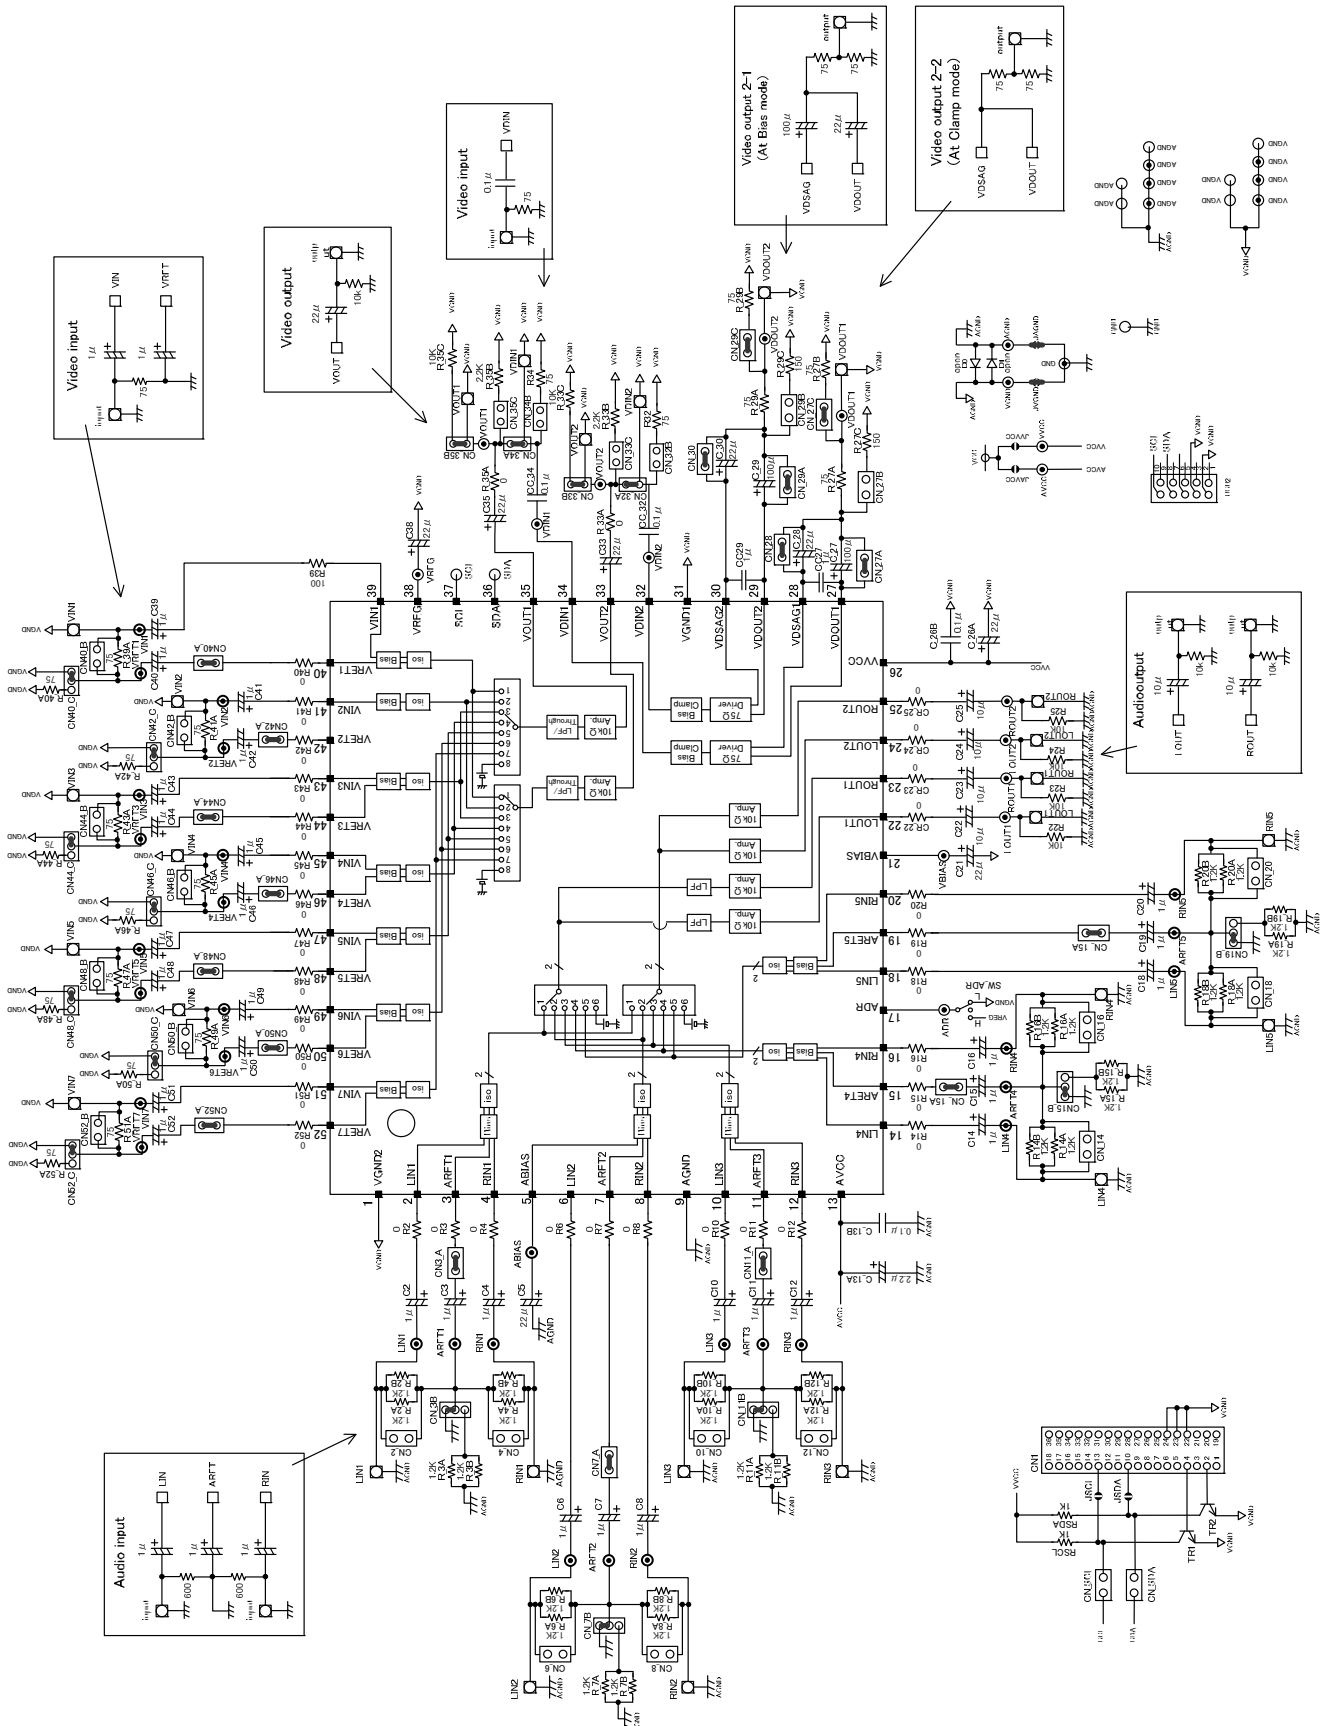

Fig.5

●Evaluation board PCB layer

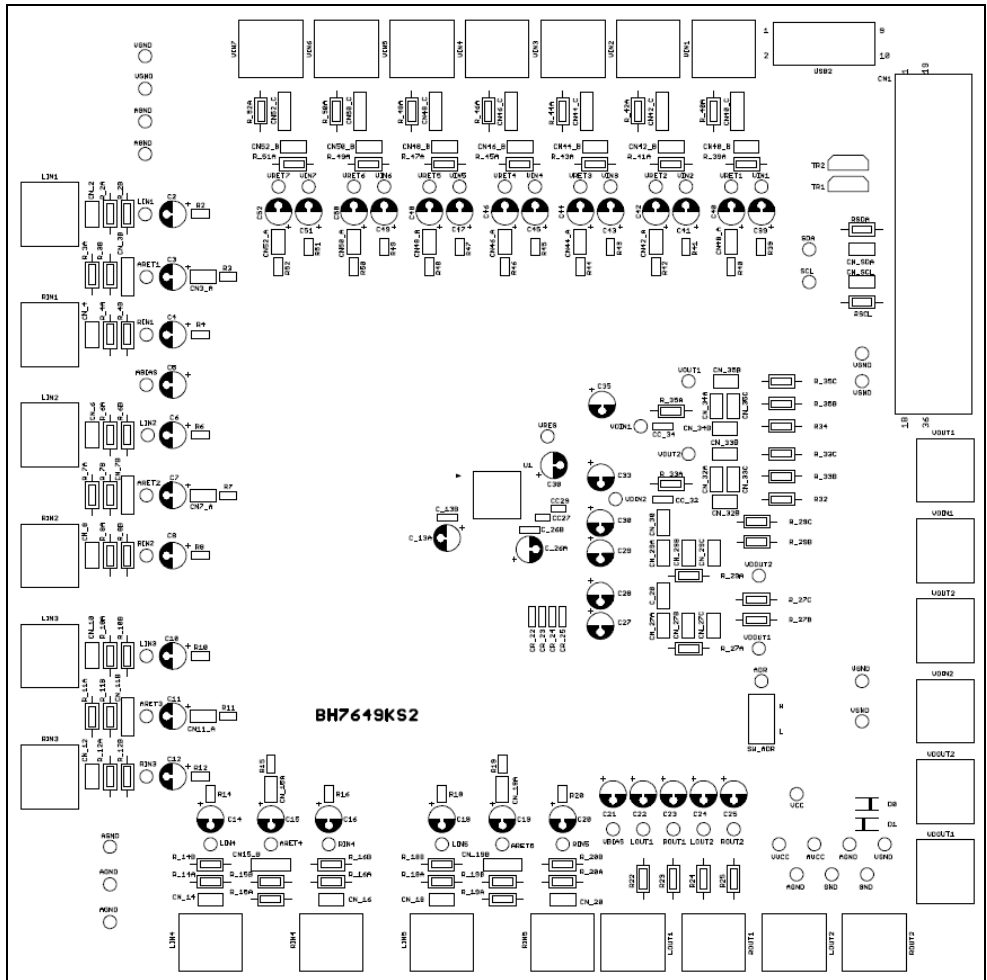

Fig.6

### ●Notes for use

- (1) Absolute maximum ratings  
If the absolute maximum ratings for applied voltage and/or operation temperature are exceeded, LSI damage may result. Therefore, do not apply voltage or use in a temperature that exceeds these absolute maximum ratings. If it is possible that absolute maximum ratings will be exceeded, use a physical safety device such as a fuse and make sure that no conditions that might exceed the absolute maximum ratings will be applied to the LSI IC.
- (2) GND potential  
Regardless of the operation mode, the voltage of the GND pin should be at least the minimum voltage. Actually check whether or not the voltage at each pin, including transient phenomena, is less than the GND pin voltage.
- (3) Thermal design  
The thermal design should be done using an ample margin that takes into consideration the allowable dissipation under actual use conditions. Perform thermal design in which there are adequate margins by taking into account the allowable power dissipation in actual states of use.
- (4) Shorts between pins and mounting errors  
When mounting LSI ICs onto the circuit board, make sure each LSI's orientation and position is correct. The ICs may become damaged if they are not mounted correctly when the power is turned on. Similarly, damage may also result if a short occurs, such as when a foreign object is positioned between pins in an IC, or between a pin and power supply or GND connection.
- (5) Operation in strong electromagnetic field  
When used within a strong electromagnetic field, evaluate carefully to avoid the risk of operation faults.
- (6) When not using a sag compensation circuit  
Connect the sag compensation pin and output pin as closely as possible. There is a danger of high frequency oscillation. Also make the distance from the output pin (OUT pin, SAG pin) to the  $75\Omega$  resistance as short as possible.
- (7) When using a sag compensation circuit  
Make the length of the output pin (OUT pin, SAG pin) and capacitor as short as possible. There is a danger of high frequency oscillation. Also make the distance from the output pin (OUT pin, SAG pin) to the  $75\Omega$  resistance as short as possible. If these cautions is not observed in board layout, connect a capacitor ( $0.01\mu\text{F}\sim 0.1\mu\text{F}$ ) as short as possible
- (8) VGND1(31pin), VGND2(1pin) and AGND(9pin) connection  
When to float any one of GND pins(VGND1, VGND2 and AGND) during operation, the internal ESD protection diode Between VGND1, VGND2 and AGND may be damaged by large current surge. If the abnormal design like floating any one of GND pins is required, it is advisable to connect external diodes between GND pins. The connection detail of external diodes is illustrated in Fig.7.

# Notice

## Precaution on using ROHM Products

- Our Products are designed and manufactured for application in ordinary electronic equipments (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment <sup>(Note 1)</sup>, transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASS III	CLASS III	CLASS II b	CLASS III
CLASS IV		CLASS III	

- ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
  - Installation of protection circuits or other protective devices to improve system safety
  - Installation of redundant circuits to reduce the impact of single or multiple circuit failure
- Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc. prior to use, must be necessary:
  - Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
  - Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
  - Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
  - Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
  - Sealing or coating our Products with resin or other coating materials
  - Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
  - Use of the Products in places subject to dew condensation
- The Products are not subject to radiation-proof design.
- Please verify and confirm characteristics of the final or mounted products in using the Products.
- In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
- De-rate Power Dissipation (Pd) depending on Ambient temperature (Ta). When used in sealed area, confirm the actual ambient temperature.
- Confirm that operation temperature is within the specified range described in the product specification.
- ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

## Precaution for Mounting / Circuit board design

- When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
- In principle, the reflow soldering method must be used; if flow soldering method is preferred, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

## Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

## Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of ionizer, friction prevention and temperature / humidity control).

## Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
  - [a] the Products are exposed to sea winds or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - [b] the temperature or humidity exceeds those recommended by ROHM
  - [c] the Products are exposed to direct sunshine or condensation
  - [d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

## Precaution for Product Label

QR code printed on ROHM Products label is for ROHM's internal use only.

## Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

## Precaution for Foreign Exchange and Foreign Trade act

Since our Products might fall under controlled goods prescribed by the applicable foreign exchange and foreign trade act, please consult with ROHM representative in case of export.

## Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data. ROHM shall not be in any way responsible or liable for infringement of any intellectual property rights or other damages arising from use of such information or data.:
2. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the information contained in this document.

## Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

**General Precaution**

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.
3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.
