Quad 2-input NAND Schmitt trigger

Rev. 1 — 8 November 2013 Product data sheet

1. General description

The 74AHC132-Q100; 74AHCT132-Q100 is a high-speed Si-gate CMOS device and is pin compatible with Low-power Schottky TTL (LSTTL). It is specified in compliance with JEDEC standard No. 7-A.

The 74AHC132-Q100; 74AHCT132-Q100 contains four 2-input NAND gates which accept standard input signals. They can transform slowly changing input signals into sharply defined, jitter free output signals. The gate switches at different points for positive-going and negative-going signals. The difference between the positive voltage V_{T+} and the negative V_{T-} is defined as the hysteresis voltage V_H.

This product has been qualified to the Automotive Electronics Council (AEC) standard Q100 (Grade 1) and is suitable for use in automotive applications.

f_i = input frequency in MHz;
f_o = output frequency in MHz;

N = number of inputs switching;
$\Sigma(C_L \times V_{CC}^2 \times f_o)$ = sum of the outputs.
