

Low-Cost Single-Ended Current-Mode PWM for Microcontroller Based Power Converters

The ISL6729 pulse width modulating (PWM) current mode controller is designed for power conversion applications that are based on a microcontroller or other device which can generate a digital clock signal at the desired switching frequency. Similar to the ISL684x family of products, the ISL6729 provides the basic current mode PWM control features, but eliminates the error amplifier, the oscillator, and the reference. An external clock signal applied to the oscillator input provides the time base and sets the maximum duty cycle. The reduced feature set is ideal for those applications where a microcontroller is available to provide the monitor and control functions. The analog PWM provides the cycle by cycle peak current mode control, leaving the monitor and control overhead to the microcontroller.

Ordering Information

PART NUMBER	PART MARKING	TEMP. RANGE (°C)	PACKAGE	PKG. DWG. #
ISL6729IB	ISL6729IB	-40 to 105	8 Ld SOIC	M8.15
ISL6729IBZ (See Note)	6729IBZ	-40 to 105	8 Ld SOIC (Pb-free)	M8.15
ISL6729IU	6729	-40 to 105	8 Ld MSOP	M8.118
ISL6729IUZ (See Note)	6729Z	-40 to 105	8 Ld MSOP (Pb-free)	M8.118

Add -T to part number for Tape and Reel packaging.

NOTE: Intersil Pb-free plus anneal products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate termination finish, which are RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.

PART NUMBER	RISING UVLO	MAX. DUTY CYCLE
ISL6729	4.75V	100%

Features

- 5V Operation
- 1A MOSFET gate driver
- 400µA startup current
- 30ns propagation delay current sense to output
- Fast transient response with peak current mode control
- Switching frequency to 2MHz
- 20ns rise and fall times with 1nF output load
- Maximum Duty Cycle Determined by Clock Input Duty Cycle
- Tight tolerance current limit threshold
- Pb-free plus anneal available (RoHS compliant)

Applications

- Telecom and Datacom Power
- Wireless Base Station Power
- File Server Power
- Industrial Power Systems
- PC Power Supplies
- Isolated Buck and Flyback Regulators
- Boost Regulators

Functional Block Diagram

Typical Application - Interleaved Multi-Phase Isolated Converter

ISL6729

Absolute Maximum Ratings

Supply Voltage, V_{DD} GND - 0.3V to +6.5V
 OUT GND - 0.3V to V_{DD} + 0.3V
 Signal Pins GND - 0.3V to 6.5V
 Peak GATE Current 1A
 ESD Classification
 Human Body Model (Per MIL-STD-883 Method 3015.7) ... 2000V
 Charged Device Model (Per EOS/ESD DS5.3, 4/14/93) ... 1000V

Thermal Information

Thermal Resistance (Typical, Note 1) θ_{JA} (°C/W)
 SOIC Package 100
 MSOP Package 130
 Maximum Junction Temperature -55°C to 150°C
 Maximum Storage Temperature Range -65°C to 150°C
 Maximum Lead Temperature (Soldering 10s) 300°C
 (SOIC, MSOP- Lead Tips Only)

Operating Conditions

Temperature Range
 ISL6729Ix -40°C to 105°C
 Supply Voltage Range (Typical)
 ISL6729 4.75V-5.25V

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

1. θ_{JA} is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief TB379 for details.
2. All voltages are with respect to GND.

Electrical Specifications

Recommended operating conditions unless otherwise noted. Refer to Block Diagram and Typical Application schematic. V_{DD} = 5V, CLK = 50kHz, T_A = -40 to 105°C (Note 3), Typical values are at T_A = 25°C

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNITS
UNDERVOLTAGE LOCKOUT					
START Threshold		4.15	4.50	4.75	V
STOP Threshold		4.00	4.30	4.60	
Hysteresis		-	0.2	-	V
Start-Up Current, I_{DD}	$V_{DD} < \text{START Threshold}$	-	0.4	12	mA
Operating Current, I_{DD}	(Note 4)	-	3.3	5.5	mA
Operating Supply Current, I_D	Includes 1nF GATE loading	-	4.1	6.0	mA
CURRENT SENSE					
Input Bias Current	$V_{CS} = 1V$	-1.0	-	1.0	μA
CS Offset Voltage	$V_{CS} = 0V$ (Note 5)	95	100	105	mV
COMP to PWM Comparator Offset Voltage	$V_{CS} = 0V$ (Note 5)	0.80	1.15	1.30	V
CS Input Signal, Maximum		0.91	0.97	1.03	V
Gain, $A_{CS} = \Delta V_{COMP} / \Delta V_{CS}$	$0 < V_{CS} < 910mV$, $V_{FB} = 0V$. (Note 5)	2.5	3.0	3.5	V/V
CS to OUT Delay	(Note 5)	-	25	40	ns
CLOCK					
Input High Voltage Level, V_{IH}		-	2.8	-	V
Input Low Voltage Level, V_{IL}		-	2.7	-	V
Maximum Clock Rate	(Note 5)	2	-	-	MHz
OUTPUT					
Gate VOH	$V_{DD} - \text{OUT}$, $I_{OUT} = -200mA$	-	1.0	2.0	V
Gate VOL	OUT - GND, $I_{OUT} = 200mA$	-	1.0	2.0	V
Peak Output Current	$C_{OUT} = 1nF$ (Note 5)	1.0	-	-	A
Rise Time	$C_{OUT} = 1nF$ (Note 5)	-	20	40	ns
Fall Time	$C_{OUT} = 1nF$ (Note 5)	-	20	40	ns

Electrical Specifications Recommended operating conditions unless otherwise noted. Refer to Block Diagram and Typical Application schematic. $V_{DD} = 5V$, $CLK = 50kHz$, $T_A = -40$ to $105^\circ C$ (Note 3), Typical values are at $T_A = 25^\circ C$ (Continued)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNITS
PWM					
Maximum Duty Cycle		-	99	-	%
Minimum Duty Cycle		-	-	0	%

NOTES:

- Specifications at $-40^\circ C$ are guaranteed by design, not production tested.
- This is the V_{DD} current consumed when the device is active but not switching. Does not include gate drive current.
- Guaranteed by design, not 100% tested in production.

Pin Descriptions

CLK - This is the oscillator timing control pin. The operational frequency and maximum duty cycle are set by applying a 5V amplitude clock signal to CLK. The logic high duration defines the maximum ON time for the output. A maximum clock rate up to 2.0MHz is possible.

COMP - COMP is the input to the PWM comparator and is typically controlled through an external error amplifier.

CS - This is the current sense input to the PWM comparator. The range of the input signal is nominally 0 to 1.0V and has an internal offset of 100mV.

GND - GND is the power and small signal reference ground for all functions.

OUT - This is the drive output to the power switching device. It is a high current output capable of driving the gate of a power MOSFET with peak currents of 1.0A. This GATE output is actively held low when V_{DD} is below the UVLO threshold.

V_{DD} - V_{DD} is the 5V power connection for the IC. The IC will operate from 4.75V to 5.25V. However, the accuracy of the voltage clamp on the COMP signal, which determines the over current threshold, is dependent on the accuracy of V_{DD} . A tight tolerance on V_{DD} will result in a tight over current threshold.

The total supply current will depend on the load applied to OUT. Total I_{DD} current is the sum of the operating current and the average output current. Knowing the operating frequency, f , and the MOSFET gate charge, Q_g , the average output current can be calculated from:

$$I_{OUT} = Q_g \times f \quad (\text{EQ. 1})$$

To optimize noise immunity, bypass V_{DD} to GND with a ceramic capacitor as close to the V_{DD} and GND pins as possible.

Ground Plane Requirements

Careful layout is essential for satisfactory operation of the device. A good ground plane must be employed. A unique section of the ground plane must be designated for high di/dt currents associated with the output stage. V_{DD} should be bypassed directly to GND with good high frequency capacitors.

Applications Information

Microcontrollers are becoming more popular for monitoring and supervisory functions in power converters due to their flexibility, capability, and declining prices. Many applications would like to take advantage of this flexibility and use them to perform the control loop function as well. There are many examples of voltage mode control using digital signal processing techniques. However, microcontrollers available today do not have the execution speed required for peak current mode control at the operational frequencies of modern switch-mode power supplies. As such, they are unable to detect the peak current and terminate the switching cycle within the few nanosecond window required. The ISL6729 provides the analog circuitry required to perform peak current control, but delegates the oscillator function to the microcontroller. This arrangement allows the microcontroller to control soft-start, maximum duty cycle, and operational frequency of the power converter, as well as performing the traditional overhead functions such as fault monitoring and system interface.

Application of the ISL6729 is similar to the ISL684x family of PWM converters except that the input bias voltage has been changed to 5V and the oscillator, reference, and error amplifier functions have been removed. An external digital clock signal, such as the PWM output of a microcontroller, must be supplied to control the frequency and maximum duty cycle. The frequency of the applied clock signal and the frequency of operation of the PWM are identical. The duty cycle of the clock is the maximum duty cycle of the PWM. Soft-start may be accomplished by incrementing the duty cycle of the applied clock signal from zero to the maximum desired value in a time frame appropriate for the application.

The Typical Application block diagram illustrates how the ISL6729 may be used for an interleaved power converter. In this example, three clock signals of equal duty cycle, but phased 120° apart, are applied to separate power stages. Each phase shares a common voltage feedback signal, but uses separate current feed back signals from each power stage for regulation. Excellent current sharing behavior is assured since each phase must produce the same peak current. Accuracy is determined by the variation of the output inductor value and the feedback components.

Multiple output power supplies can be created in a similar fashion. Only one clock signal is required if in-phase operation is desired. Each stage may be independently controlled using separate voltage and current feedback loops.

Small Outline Plastic Packages (SOIC)

NOTES:

1. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication Number 95.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
4. Dimension "E" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
5. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
6. "L" is the length of terminal for soldering to a substrate.
7. "N" is the number of terminal positions.
8. Terminal numbers are shown for reference only.
9. The lead width "B", as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch).
10. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.

NOTES:

- These package dimensions are within allowable dimensions of JEDEC MO-187BA.
- Dimensioning and tolerancing per ANSI Y14.5M-1994.
- Dimension "D" does not include mold flash, protrusions or gate burrs and are measured at Datum Plane. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
- Dimension "E1" does not include interlead flash or protrusions and are measured at Datum Plane. $\boxed{-H-}$ Interlead flash and protrusions shall not exceed 0.15mm (0.006 inch) per side.
- Formed leads shall be planar with respect to one another within 0.10mm (0.004) at seating Plane.
- "L" is the length of terminal for soldering to a substrate.
- "N" is the number of terminal positions.
- Terminal numbers are shown for reference only.
- Dimension "b" does not include dambar protrusion. Allowable dambar protrusion shall be 0.08mm (0.003 inch) total in excess of "b" dimension at maximum material condition. Minimum space between protrusion and adjacent lead is 0.07mm (0.0027 inch).
- Datums $\boxed{-A-}$ and $\boxed{-B-}$ to be determined at Datum plane $\boxed{-H-}$.
- Controlling dimension: MILLIMETER. Converted inch dimensions are for reference only.
