

CMOS quad 3-state differential line receiver

Datasheet - production data

The ST26C32AB has an input sensitivity of 200 mV over the common mode input voltage range of ± 7 V. The ST26C32AB features internal pull-up and pull-down resistors which prevent output oscillation on unused channels. The ST26C32AB provides an enable and disable function to all four receivers and features 3-state output with 6 mA source and sink capability.

Features

- CMOS design for low power
- ± 0.2 V sensitivity over input common mode voltage range
- Typical propagation delay: 19 ns
- Typical input hysteresis: 60 mV
- Input will not load line when $V_{CC} = 0$ V
- Meets the requirements of EIA standard RS-422, RS-423
- 3-state outputs for connection to system buses
- Available in surface mount

Description

The ST26C32AB is a quad differential line receiver designed to meet the RS-422, RS-423 standards for balanced and unbalanced digital data transmission, while retaining the low power characteristics of CMOS.

2 Maximum ratings

Table 4. Absolute maximum ratings ⁽¹⁾ ⁽²⁾

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage	7	V
V_{CM}	Input common mode range	± 14	V
V_{DIFF}	Differential input voltage	± 14	V
V_{IN}	Enable input voltage	7	V
I_{OMAX}	Maximum current per output	± 25	mA
T_{STG}	Storage temperature range	-65 to +150	°C

1. Absolute maximum ratings are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the device should be operated at these limits. The table of electrical characteristics provide conditions for actual device operation.
2. Unless otherwise specified, all voltage are referenced to ground. All currents into the device pins are positive; all currents out of the device pins are negative.

Table 5. Recommended operating conditions

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage	4.5 to 5.5	V
T_A	Operating temperature range	-40 to +85	°C
