APPLICATION NOTE

The PLCDAxxC-6 Series are low capacitance, bidirectional TVS arrays that are designed to protect I/O or high speed data lines from the damaging effects of ESD or EFT. This product series has a surge capability of 500 Watts P_{PP} per line for an 8/20µs waveshape and offers ESD protection > 40kv.

BIDIRECTIONAL COMMON-MODE CONFIGURATION (Figure 1)

Ideal for use multimode transceiver I/O lines, the PLCDAxxC-6 Series provides up to six (6) lines of protection in a common-mode configuration as depicted in Figure 1.

Circuit connectivity is as follows:

- ✓ Line 1 is connected to Pin 1.
- ✓ Line 2 is connected to Pin 2.
- ✓ Line 3 is connected to Pin 3.
- Line 4 is connected to Pin 8.
- ✓ Line 5 is connected to Pin 7.
- Line 6 is connected to Pin 6.
- Pins 4 and 5 are connected to Ground.

BIDIRECTIONAL COMMON-MODE CONFIGURATION (Figure 2)

The PLCDAxxC-6 Series also provides video line applications six (6) lines of protection in a common-mode configuration as depicted in Figure 2.

Circuit connectivity is as follows:

- ✓ Line 1 (Red) is connected to Pin 1.
- ✓ Line 2 (Green) is connected to Pin 2.
- ✓ Line 3 (Blue) is connected to Pin 3.
- ✓ Line 4 (VSYNC) is connected to Pin 6.
- ✓ Line 5 (HSYNC) is connected to Pin 7.
- ✔ Pins 4 and 5 are connected to Ground.

CIRCUIT BOARD LAYOUT RECOMMENDATIONS

Circuit board layout is critical for Electromagnetic Compatibility (EMC) protection. The following guidelines are recommended:

- The protection device should be placed near the input terminals or connectors, the device will divert the transient current immediately before it can be coupled into the nearby traces.
- The path length between the TVS device and the protected line should be minimized.
- All conductive loops including power and ground loops should be minimized.
- The transient current return path to ground should be kept as short as possible to reduce parasitic inductance.
- Ground planes should be used whenever possible. For multilayer PCBs, use ground vias.
