

OEM335A 3.5 digit LED voltmeter module

features

- Bright, red LED display
- Single 5V DC operation.
- 10.16mm digit height
- Decimal point selectable
- Self mountable.
- Single ended or differential input.

DESCRIPTION

The OEM335A is a complete digital voltmeter module in a very compact package incorporating a dual-slope analogue to digital converter, a 100mV reference with 200mV full scale input sensitivity.

The large sized LED makes the module easily readable from distance away. Auto-zeroing is provided by the circuit itself, so no zero adjustment is required. The module also has input polarity and over-range indication.

USER INSTRUCTIONS

The OEM335A is designed for +5V single rail supply. Incorrect supply will damage the module.
Apply the input signal between pin 3 (INHI) and pin 4 (INLO). The input range is 0 - 199.9mV.
Over range is indicated by illuminating a "1" in the most significant digit and blanking the other digits.
It is recommended to use this module with floating inputs i.e. the low input signal (INLO) must be isolated from the power supply ground (GND). Where (INLO) must be referenced to the power supply, connect via a 10KΩ resistor and a 0.1μF capacitor as shown opposite.
To activate a decimal point, connect the appropriate decimal point pin to DPcom.

APPLICATION CIRCUITS

DC VOLTAGE MEASUREMENT

The input impedance becomes R1+R2. Choose accurate stable resistors. Typically, R1=1MΩ. 9MΩ is a practical upper limit.

MULTI-RANGE DC VOLTAGE MEASUREMENT

DC CURRENT MEASUREMENT

DC MULTI-RANGE CURRENT MEASUREMENT

AC VOLTAGE MEASUREMENT

The meter can only measure DC. Use the above circuit to convert AC to DC. For voltages above 200mV AC, a potential divider is required before the converter circuit as shown in the "Voltage measurement" section above
