RECORD OF REVISION

Revision Date	Page	Contents	Editor
2008/11/20	-	New Release	Edward

1 FEATURES

- (1) Display format: 320×240 dot-matrix, 1/240 duty.
- (2) Construction: FSTN LCD, TAB type LCD driver, White Edge LED backlight, Touch Panel, Touch Panel controller (TSC2046) and PCB.
- (3) Display type: FSTN, Transflective, 6 o'clock view.
- (4) Controller: RA8835AP3N.
- (5) Common and Segment Driver: IST3031 and IST3032.
- (6) **New Driving Method** CMOS LCD Driver for Low Power Consumption Driving.
- (7) 5V or 3.3V single power input. Built-in specific power supplies circuit for LCD driving. **Ultra Low Power Consumption.**
- (8) Normal temperature type.
- (9) Portrait(Default) or Landscape Display Type Selectable by Jumper Setting.
- (10) 80 or 68 Family MPU Selectable by Jumper Setting
- (11) ROHS compliant.

Note:

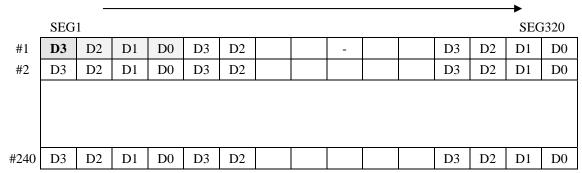

- 1. In general, the internal registers of the RA8835A are modified as each command parameter is input. However, the microprocessor does not have to set all the parameters of a command and may send a new command before all parameters have been input. The internal registers for the parameters that have been input will have been changed but the remaining parameter registers are unchanged.
 - 2 bytes parameters(where two bytes are treated as 1 data item) are handled as following:
 - a. CSRW, CSRR: Each byte is processed individually. The microprocessor may read or write just the low byte of the cursor address.
 - b. SYSTEM SET, SCROLL, CGRAM ADR. : Both parameter bytes are processed together. If the command is changed after half of the parameter has been input, the single byte is ignored.
- 2. APL and APH are 2-byte parameters, but are treated as two 1-byte parameters.
- 3. Please refer to RA8835A LCD Controller Data Book for detail.

11 QUALITY AND RELIABILITY

11.1 TEST CONDITIONS

Tests should be conducted under the following conditions:

Ambient temperature : 25 ± 5 °C

Humidity : $60 \pm 25\%$ RH.

11.2 SAMPLING PLAN

Sampling method shall be in accordance with MIL-STD-105E , level II, normal single sampling plan .

11.3 ACCEPTABLE QUALITY LEVEL

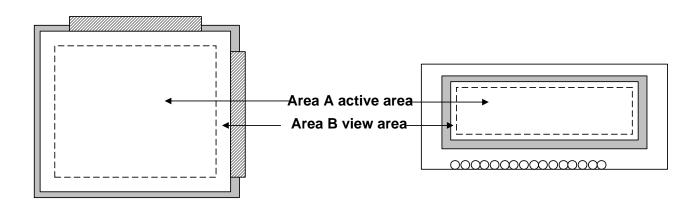

A major defect is defined as one that could cause failure to or materially reduce the usability of the unit for its intended purpose. A minor defect is one that does not materially reduce the usability of the unit for its intended purpose or is an infringement from established standards and has no significant bearing on its effective use or operation.

11.4 APPEARANCE

An appearance test should be conducted by human sight at approximately 30 cm distance from the LCD module under fluorescent light. The inspection area of LCD panel shall be within the range of following limits.

Note 1: Condensation of water is not permitted on the module.

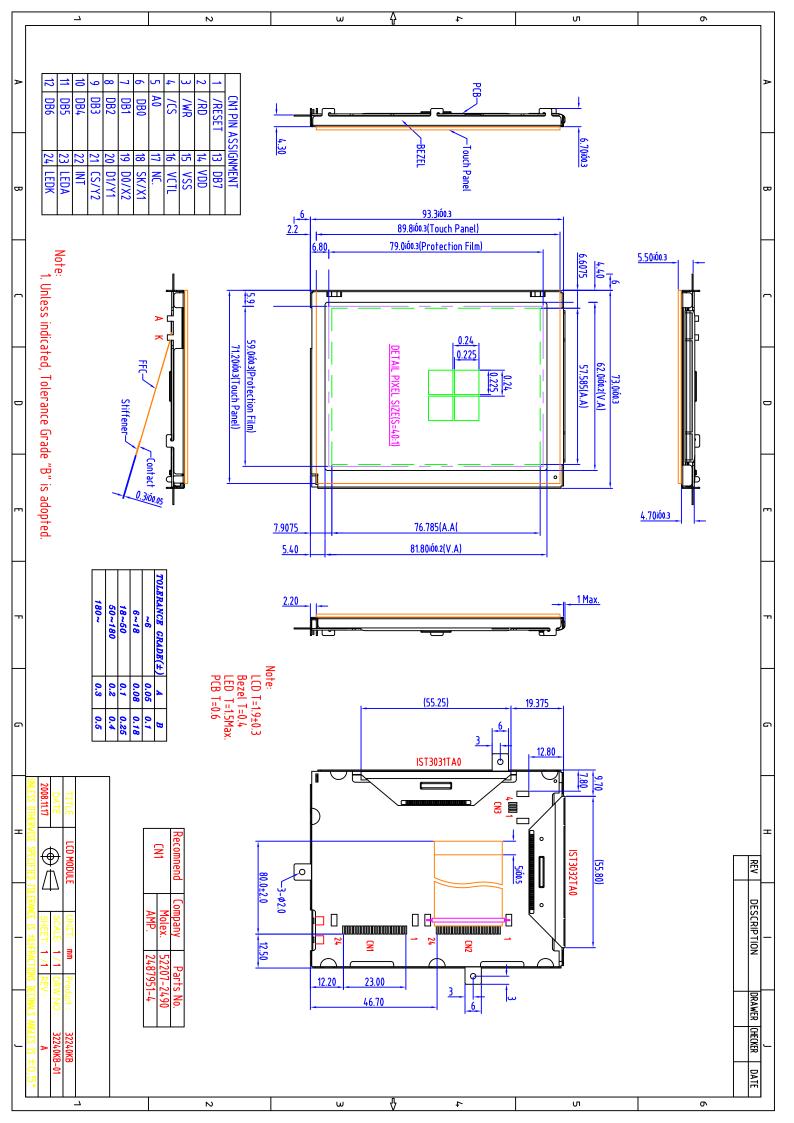

Note 2 : The module should be inspected after 1 hour storage in normal conditions $(15-35^{\circ}\text{C}, 45-65\%\text{RH})$.

Definitions of life end point :

- Current drain should be smaller than the specific value.
- Function of the module should be maintained.
- Appearance and display quality should not have degraded noticeably.
- Contrast ratio should be greater than 50% of the initial value.

12 HANDLING PRECAUTIONS

- (1) A LCD module is a fragile item and should not be subjected to strong mechanical shocks.
- (2) Avoid applying pressure to the module surface. This will distort the glass and cause a change in color.
- (3) Under no circumstances should the position of the bezel tabs or their shape be modified.
- (4) Do not modify the display PCB in either shape or positioning of components.
- (5) Do not modify or move location of the zebra or heat seal connectors.
- (6) The device should only be soldered to during interfacing. Modification to other areas of the board should not be carried out.
- (7) In the event of LCD breakage and resultant leakage of fluid do not inhale, ingest or make contact with the skin. If contact is made rinse immediately.
- (8) When cleaning the module use a soft damp cloth with a mild solvent, such as Isopropyl or Ethyl alcohol. The use of water, ketone or aromatic is not permitted.
- (9) Prior to initial power up input signals should not be applied.
- (10) Protect the module against static electricity and observe appropriate anti-static precautions.
