Description

The F3SJ-A system is a full-featured safety light curtain that meets demanding and complex guarding requirements.

Inside its compact housing the F3SJ-A combines several features which allow it to be used in a variety of ways. These features include a warning zone function, as well as fixed and floating blanking. Also included is a valuable feature known as “partial muting”.

For complete safety, External Device Monitoring (EDM) is included and cross-talk prevention features are standard.

For ease of use, the F3SJ-A can be configured by using either a handheld setting console or by connecting to a computer running the convenient and comprehensive SD Manager programming software.

Go to the Engineering Guide
For in-depth information on safety standards and use.

Muting Functions

Muting temporarily disables the F3SJ-A when an object must pass through the detection zone, such as when supplying a workpiece to your equipment.

Partial muting increases the level of safety by only muting the beams of the safety light curtain where the workpiece passes through, while preventing muting in all other areas.

Position detection muting is used in applications where the workpiece is set in position each time by an operator, and a turntable or positioning robot then moves the workpiece to the area where the work is performed. A limit switch or other means is used to detect when the robot is in a safe position and muting is then applied.

Warning Zone Function

With the F3SJ-A part of the detection zone can be used as warning zone to generate an alarm when someone approaches the danger zone. If the person then enters the danger zone the F3SJ-A will send a stop signal to the guarded machine. In addition, the auxiliary output can be used to activate a flashing lamp to alert the person in the warning zone.

The detection zone for a single F3SJ-A can be divided into two zones or set a single warning zone for multiple, cascaded F3SJ-A units.

Dividing the zone between series-connected sensors

A single sensor can also be divided

Convenient Serial Connection

Sensors with protected heights of almost 2.5 m are available. If you want to make changes in the future, you can always extend the protective height with series connections. Up to four sets (400 beams) can be series connected and with series-connection cables up to 15 m in length, applications can cover a wide area.

■ Applications

With built-in muting and blanking functions, the F3SJ-A is can be employed in a wide variety of applications from robotic work cells to small machines. The potential for cascaded design and a broad selection of minimum object resolutions adds to this versatility.

Selecting the Best Configuration

Space Efficient and Low Cost

The built-in external device monitoring function eliminates the need for a safety relay unit.

D

safety light curtains

Reduced Wiring and Easy Maintenance

Cables with connectors on both ends simplify connections and prevent wiring errors.

Multi-input Safety Circuit Configuration

When an emergency stop or door switch is used in conjunction with the F3SJ-A, the safety circuit becomes more complex. The F3SX safety controller is one possible solution. Four models are available to match your desired inputs and outputs. Use an F39-CN5 branch connector to significantly reduce the time required to make the proper connections.

■ Wiring

Wiring for Single F3SJ-A Application

Detection of a welded relay contact is possible without a controller relay unit.

Wiring Connection with an F3SX-E-L2R Controller (Category 4)

An emergency stop switch, door switch, two-hand control, single beam or relay unit can be used in conjunction with the F3SX. Various settings can be changed and input/output terminals can be monitored using the setting support software for F3SX.
