LUXEON
NEVER BEFORE POSSIBLE

LUXEON® Z

Color and White LED Portfolio

Introduction

LUXEON® Z is a broad portfolio of Color and White LEDs that enable never before seen lumen density, flexibility and freedom of design. Available in the full spectrum of colors from 440nm to 670nm and select white color temperatures, LUXEON Z is ideal for entertainment/stage lighting, indoor and outdoor architectural lighting, emergency vehicle lighting, remote phosphor applications and a wide spectrum of specialty lighting applications.

Features

- 2.2 mm² micro footprint
- Un-encapsulated
- Tested and Binned at 500 mA
- Up to 1A max drive current
- Up to 150C max Tj

Benefits

- Industry's leading Lm/mm² for high flux density solution
- Highest degree of design flexibility
- Superior color mixing and beam control through choice of optics
- Enables customizable light sources: linear, rectangular, circular.

General Product Information

Product Nomenclature

The part number designation for LUXEON Z - Color LEDs is explained as follows:

L X Z I - A B C D - E F G H

Where:

- A — designates radiation pattern (value P for lambertian)
- B — designates color (see LUXEON Z color binning and labeling section)
- C — designates color variant (0 for color variants)
- D — designates test current (value I for 500 mA.)
- E — open slot to accommodate additional requirements per product and part number
- FGH — minimum luminous flux (lm) or radiometric power (mW) performance

The part number designation for LUXEON Z - White LEDs is explained as follows

L X Z I - A B C D - E F G H

Where:

- AB — two digits representing nominal CCT (e.g. 30 = 3000K, 40 = 4000K)
- CD — two digits representing minimum CRI (e.g. 70 for 70 CRI, 80 for 80 CRI)
- E — open slot to accommodate additional requirements per product and part number
- FGH — minimum luminous flux (lm)

Flux and Efficacy Performance Characteristics

Luminous Flux Characteristics for LUXEON Z Color Portfolio, Thermal Pad Temperature =25°C

Table I.

Color	Part Number	Min Luminous Flux (lm) or Radiometric Power (mW)	Typ Flux (lm/mw)	Typ Efficacy (lm/W) or WPE	Typ Luminous Flux (lm) or Radiometric Power (mW)	Typ Efficacy (lm/W) or WPE

	LXZ1-PL01-0048	48	54	51	73	48

Notes for Table I:

1. Minimum luminous flux or radiometric power performance guaranteed within published operating conditions. Philips Lumileds maintains a tolerance of $\pm 6.5\%$ on flux and power measurements.
2. Typical luminous flux or radiometric power performance when device is operated within published operating conditions.

Flux and Efficacy Performance Characteristics, Continued

Luminous Flux Characteristics for LUXEON Z White, Thermal Pad Temperature =25°C

Table 2.

White	Part Number	Min Luminous Flux (lm)	Typ Flux (lm/mw)	Typ Efficacy (lm/W)	Typ Luminous Flux (lm)	Typ Efficacy (lm/W)
Performance @ 500 mA					Performance @ 700 mA	
4000K/ 70 CRI	LXZ1-4070-0144	144	148	102	194	94
	LXZ1-4070-0134	134	140	96	183	88
	LXZ1-4070-0124	124	130	90	170	83

Flux Performance, Binning, and Supportability

LEDs are produced with semiconductor technology that is subject to process variation, yielding a range of flux performance that is approximately Gaussian in nature. In order to provide customers with fine granularity within the overall flux distribution, Philips Lumileds separates LEDs into fixed, easy to design with, minimum luminous flux bins. To verify supportability of parts chosen for your application design, please consult your Philips Lumileds sales representative.

Optical Characteristics

LUXEON Z Color Portfolio at Test Current = 500 mA Thermal Pad Temperature = 25°C

Table 3.

Color	Dominant Wavelength ^[1] λ_D , or Peak Wavelength ^[2] λ_p			Typical Spectral Half-width ^[3] (nm) $\Delta\lambda_{1/2}$	Typical Temperature Coefficient of Dominant or Peak Wavelength (nm/°C) $\Delta\lambda_D / \Delta T_J$	Typical Total Included Angle ^[4] (degrees) $\theta_{0.90V}$	Typical Viewing Angle ^[5] (degrees) $2\theta_{1/2}$
	Min.	Typ.	Max.				
Green ^[6]	520.0 nm	530.0 nm	540.0 nm	30	0.04	140	125
Cyan ^[6]	490.0 nm	505.0 nm	508.0 nm	30	0.03	140	125
Blue ^[6]	460.0 nm	470.0 nm	480.0 nm	20	0.03	140	125
Royal Blue ^{[2] [6]}	440.0 nm	447.5 nm	460.0 nm	20	0.03	140	125
Red ^[7]	620.0 nm	627.0 nm	645.0 nm	20	0.06	150	145
Deep Red ^[7]	650.0 nm	655.0 nm	670.0 nm	20	0.06	150	145
Red-Orange ^[7]	610.0 nm	617.0 nm	620.0 nm	20	0.06	150	145
Amber ^[7]	584.5 nm	590.0 nm	597.0 nm	20	0.10	150	145

Notes for Table 3:

1. Dominant wavelength is derived from the CIE 1931 Chromaticity diagram and represents the perceived color. Philips Lumileds maintains a tolerance of ± 0.5 nm for dominant wavelength measurements.
2. Royal Blue and Deep Red LEDs are binned by radiometric power and peak wavelength rather than photometric lumens. Philips Lumileds maintains a tolerance of ± 2 nm for peak wavelength measurements.
3. Spectral width at $\frac{1}{2}$ of the peak intensity.
4. Total angle at which 90% of total luminous flux is captured.
5. Viewing angle is the off axis angle from lamp centerline where the luminous intensity is $\frac{1}{2}$ of the peak value.
6. Green, cyan, blue, royal blue and white products are built with Indium Gallium Nitride (InGaN).
7. All red, deep red, red-orange, and amber are built with Aluminum Indium Gallium Phosphide (AlInGaP).

LUXEON Z White at Test Current = 500 mA Thermal Pad Temperature = 25°C

Table 4.

Nominal ANSI CCT	Part Number	Typical Total Included Angle ^[1] (degrees) $\theta_{0.90V}$	Typical Viewing Angle ^[2] (degrees) $2\theta_{1/2}$
4000K	LXZ1-4070-XXXX	140	120

Notes for Table 4:

1. Total angle at which 90% of total luminous flux is captured.
2. Viewing angle is the off axis angle from lamp centerline where the luminous intensity is $\frac{1}{2}$ of the peak value.

Electrical Characteristics

Electrical Characteristics at 500 mA for LUXEON Z Colors, Thermal Pad Temperature = 25°C

Table 5.

Color	Part Number	Forward Voltage V_f @ 500 mA (V)			Forward Voltage V_f @ 700 mA Typ.	Typical Temperature Coefficient of Forward Voltage ^[1] (mV/°C) $\Delta V_f / \Delta T_j$	Typical Thermal Resistance Junction to Thermal Pad (°C/W) $R\theta_{j-c}$
		Min.	Typ.	Max.			
Green	LXZI-PM0I	2.50	3.05	3.50	3.15	-2 to -4	5
Cyan	LXZI-PE0I	2.50	2.95	3.50	3.05	-2 to -4	5
Blue	LXZI-PB0I	2.50	3.15	3.50	3.25	-2 to -4	5
Royal Blue	LXML-PR0I	2.50	2.90	3.50	2.95	-2 to -4	5
Red	LXZI-PD0I	1.75	2.20	2.75	2.40	-2 to -4	8

Luminous Flux Bins

Tables 10 and 11 list the standard photometric luminous flux/radiometric power bins for LUXEON Z colors and LUXEON Z white emitters (tested and binned at 500 mA). Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all colors.

Table 10.

LUXEON Z Flux Bins - All Colors and White		
Bin Code	Minimum Flux (lm)	Maximum Flux (lm)
A	24	32
B	32	40
C	40	48
D	48	56
E	56	64

Company Information

Philips Lumileds is a leading provider of LEDs for everyday lighting applications. The company's records for light output, efficacy and thermal management are direct results of the ongoing commitment to advancing solid-state lighting technology and enabling lighting solutions that are more environmentally friendly, help reduce CO₂ emissions and reduce the need for power plant expansion. Philips Lumileds LUXEON® LEDs are enabling never before possible applications in outdoor lighting, shop lighting, home lighting, consumer electronics, and automotive lighting.

Philips Lumileds is a fully integrated supplier, producing core LED material in all three base colors, (Red, Green, Blue) and white. Philips Lumileds has R&D centers in San Jose, California and in the Netherlands, and production capabilities in San Jose, Singapore and Penang, Malaysia. Founded in 1999, Philips Lumileds is the high flux LED technology leader and is dedicated to bridging the gap between solid-state technology and the lighting world. More information about the company's LUXEON LED products and solid-state lighting technologies can be found at www.philipslumileds.com.
