DESCRIPTION

The **66024** optocoupler contains two completely isolated optocouplers in a hermetically sealed dual inline package. Each channel provides high switching speeds while providing high isolation (1500V min) over the full military temperature range (-55° to +125°C). The 66024 is available in standard and MIL-PRF-38534 screened versions or tested to customer specifications.

NOTES:

- Each channel.
- CURRENT TRANSFER RATIO is defined as the ratio of output collector current, I_O , to the forward LED input current, I_F , times 100%.
- Measured between each input pair shorted together.
- Measured between input pins shorted together and the output pins for that channel shorted together.
- CM_H is the maximum tolerable common mode transient to assure that the output will remain in a high logic state (ie. $V_O > @.0\text{V}$).
- CM_L is the maximum tolerable common mode transient to assure that the output will remain in a low logic state (ie. $V_O < 0.8\text{V}$).

RECOMMENDED OPERATING CONDITIONS:
