

Features

- Low distortion transformer signal coupling
- Complete ring detector circuit
- Low power hookswitch
- Electronic inductor/gyrator circuit
- Surge protection
- V.32 bis /V.34 compatible
- PC board mountable
- 16kHz metering filter

Applications

- Home medical devices
- Plant monitoring equipment
- Security/alarm systems
- Utility meters
- Modems
- Voicemail systems
- Vending machines
- Elevator control boxes
- Network routers
- PBX Systems
- PC mother boards
- Telephony applications
- Digital telephone answering machines

Description

Clare's Cybergate™ 23XX DAA modules provide a complete telephone line interface circuit in a small 1.07" x 1.07" x 0.4" package. This module provides a fast and cost effective solution for designs that require an interface to the telephone line. The CYG23XX0 is designed to meet PTT and safety regulations in Germany.

Approvals

- BSI Approved to EN60950
Certification #: 8123

Ordering Information

Part #	Description
CYG2300	DAA Module Germany
CYG2320	DAA Module Australia

Block Diagram

Handling and Assembly Recommendations

The CYG23XX products are not hermetically sealed and should not be exposed to any liquid-based rinsing processes. Clare recommends two (2) approaches. The modem should either use a no clean soldering flux that would mostly evaporate during the normal wave soldering processes, or be soldered in by hand after the rest of the card is wave soldered.

Absolute Maximum Ratings (@ 25° C)

Parameter	Min	Typ	Max	Units
Isolation Voltage	-	-	1500	V _{RMS}
Operational Temperature	0	-	70	°C
Storage Temperature	0	-	100	°C
Relative Humidity (Non-Condensing)	10	-	85	%
Soldering Temperature	-	-	260	°C
Tip/Ring Load Current (continuous)	-	-	120	mA
Hookswitch LED Drive Current	-	-	50	mA
Hookswitch LED Reverse Voltage	-	-	5	V
Ring Detect Phototransistor Voltage V _{CC}	-	-	20	V

Absolute Maximum Ratings are stress ratings. Stresses in excess of these ratings can cause permanent damage to the device. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this data sheet is not implied. Exposure of the device to the absolute maximum ratings for an extended period may degrade the device and effect its reliability.

Electrical Characteristics

Parameter	Conditions	Min	Typ	Max	Unit
DC Electrical Characteristics					
On-Hook Impedance	V _{Tip} -Ring=100VDC	10	-	-	MΩ
On-Hook Line Leakage Current	V _{Tip} -Ring=100VDC	-	-	10	μA
Off-Hook Relay Supply Current	V _{CC} =5V	7	8	9	mA
Hookswitch Power Source	-	4.75	5.0	20	V
DC Loop Current	-	5	-	120	mA
Mute Relay Supply Current	V _{CC} =5V	7	8	9	mA
AC Signal Path Electrical Characteristics					
Return Loss	f=300-3500Hz	14	25	-	dB
Insertion Loss					
Transmit	Test Circuit 1	-	-	7	dB
Receive	Test Circuit 2	-	-	7	dB
Frequency Response	f=300-3500Hz	-0.25	-	+0.25	dB
Longitudinal Balance					
On-Hook	-	60	-	-	dB
Off-Hook	-	40	-	-	dB
Total Harmonic Distortion	f=350Hz, P=-10dBm	-	-80	-	dB
Secondary Load Impedance	Line 1 and Line 2	-	100	-	Ω
Primary Source Impedance	Tip and Ring	-	600	-	Ω
Ring Detection Circuit Characteristics					
Ringing Voltage Detection Range	-	29	-	-	V _{RMS}
Ringing Frequency Detection Range	50-70Hz	15	-	70	Hz
Ringer Impedance	f=25Hz	-	18	-	KΩ
RING Output Voltage (Pulsed)	V _{CC} =+5V				
Logic '0', Ring present		-	-	0.8	V
Logic '1', Ring not present		-	-	V _{CC}	V
Surge, Transient, and Isolation Characteristics					
Surge Protection Voltage Tip and Ring	-	-	-	300	V
Isolation Voltage (Pins 1-7 to 10-11)	60 Seconds	-	-	1500	V _{RMS}

Test Circuits

1. CYG23XX Transmit Insertion Loss

2. CYG23XX Receive Insertion Loss

Package Pinouts

CYG23XX

CYG23XX Pinouts & Definitions

PIN#	I/O	Name	Function
1	I/O	LINE1	Transformer isolated audio signal coupling path for the telephone line.
2	I/O	LINE2	Transformer isolated audio signal coupling path for the telephone line.
3	O	RING	Active LOW indicates an incoming ring signal. This is pulsed LOW by the AC ring signal at the ring frequency.
4	I	GND	Connected to host system ground.
5	I	OH	Driving this pin LOW asserts the off-hook condition. The hookswitch LED is current limited by an internal 470W resistor.
6	I	MUTE	Driving this pin LOW activates the mute relay for pulse dialing. See Figure 1. The mute relay LED is current limited by an internal 470W resistor or
7	I	V _{CC}	Provides power to the hookswitch LED. Typically +5V for 8mA LED current. LED is current limited by an internal 470W resistor. V _{CC} should not exceed 20V.
11	I/O	RING	Connection to telephone line Ring conductor.
10	I/O	TIP	Connection to telephone line Tip conductor.

Off-Hook Transient Requirement

In order to meet Section 4.6.1 of the CTR-21 requirement, it is necessary to assert the $\overline{\text{MUTE}}$ pin of the CYG23XX for a duration of 80mS after the $\overline{\text{OH}}$ pin is driven low as shown in Figure 1. This can be accomplished via the host firmware or external hardware as shown in Figures 2 and 3 respectively.

$\overline{\text{MUTE}}$ and $\overline{\text{OH}}$ Timing
Figure 1

Figure 2

* Micrel MIC1555 or Equivalent

Figure 3

Asserting the $\overline{\text{MUTE}}$ pin causes the internal gyrator circuit in the CYG23XX to be bypassed, allowing low impedance pulse dialing to be performed by pulsing the $\overline{\text{OH}}$ pin. In Figure 2, the microcontroller output port going to the $\overline{\text{MUTE}}$ pin is used as a shunt for low impedance dialing and is asserted for 80mS when the $\overline{\text{OH}}$ signal is asserted. This method is preferred when the user has control of the host firmware and can easily write a subroutine to accomplish this function.

For users that do not have easy access to the modem firmware, some external hardware can be added to accomplish the same function. Figure 3 shows a monostable (one-shot) such as a 555 timer which is designed to generate an 80mS low going pulse upon the assertion of the $\overline{\text{OH}}$ signal. This 80mS pulse is ANDed with the low impedance pulse dial shunt signal which overrides the 80mS signal when pulse dialing is enabled. The pulse dial shunt signal is included as a standard output pin in most modem chipsets. This pin is activated when an ATDP command is issued to the modem.
