CENTIGRID® ESTABLISHED RELIABILITY RELAY

DPDT
CMOS COMPATIBLE

SERIES 116C

| SERIES DESIGNATION | RELAY TYPE | |
|-----------------------|---|--|
| 116C | DPDT general-purpose relay with internal power MOSFET driver, Zener diode gate protection, and diode coil suppression | |

DESCRIPTION

The 116C Centigrid® relay is an ultraminiature, hermetically sealed, armature relay capable of being directly driven by most IC logic families. Its low profile height and .100" grid spaced terminals, which preclude the need for spreader pads, make it ideal for applications where extreme packaging density and/or close PC board spacing are required.

The basic concept and internal mechanical structure are similar to the 114 DPDT relay. The following unique construction features and manufacturing techniques provide overall high reliability and excellent resistance to environmental extremes:

- All welded construction.
- Unique uni-frame design providing high magnetic efficiency and mechanical rigidity.
- High force/mass ratios for resistance to shock and vibration.
- Advanced cleaning techniques provide maximum assurance of internal cleanliness.
- Precious metal alloy contact material with gold plating assures excellent high current and dry circuit switching capabilities.

By virtue of its inherently low intercontact capacitance and contact circuit losses, the 116C relay has proven to be an excellent ultraminiature RF switch for frequency ranges well into the UHF spectrum. A typical RF application for this Centigrid® relay is in handheld radio transceivers, wherein the combined features of good RF performance, small size, low coil power dissipation and high reliability make it a preferred method of Transmit-Receive switching (see Figure 1).

The Series 116C utilizes an internal silicon diode for coil suppression, a Zener diode to protect the MOSFET gate input, and an N-channel enhancement mode MOSFET chip, which enables direct relay interfacing with most Microprocessor and IC logic families (CMOS, TTL and MOS).

0.11 oz. (3.12g) max.

SERIES 116C

GENERAL NOTES

- Relay contacts will exhibit no chatter in excess of 10 µsec or transfer in excess of 1 µsec.
- "Typical" characteristics are based on available data and are best estimates. No on-going verification tests are performed.
- 3. Unless otherwise specified, parameters are initial values.
- 4. Maximum rated gate voltage = 15 Vdc.
- Unless otherwise specified, relays will be supplied with either gold plated or solder coated leads.
- The slash and character appearing after the slash are not marked on the relay.
- 7. Screened HI-REL versions available. Contact factory.

8.

Notes: Logic 1 activates the relay. Logic 0 de-activates the relay. Vcc = logic bias power. Vr = coil energization voltage.

| | | RF180 | .325 (8.25) |
| "M9" Pad for Centigrid® | | A150 | .305 (7.75) |

Notes:

- 1. Spacer pad material: Polyester film.
- 2. To specify an "M4" or "M9" spacer pad, refer to the mounting variants portion of the part numbering example in the applicable datasheet.
- 3. Dimensions are in inches (mm).
- 4. Unless otherwise specified, tolerance is \pm .010 (.25).
- 5. Add $10 \text{ m}\Omega$ to the contact resistance show in the datasheet.
- 6. Add 0.01 oz. (0.25 g) to the weight of the relay assembly shown in the datasheet.

Notes:

- 1. Spreader pad material: Diallyl Phthalate.
- 2. To specify an "M", "M2" or "M3" spreader pad, refer to the mounting variants portion of the part number example in the applicable datasheet.
- 3. Dimensions are in inches (mm).
- 4. Unless otherwise specified, tolerance is \pm .010" (0.25).
- 5/. Add 25 m Ω to the contact resistance shown in the datasheet.
- 6/. Add .01 oz. (0.25 g) to the weight of the relay assembly shown in the datasheet.
- 7/. Add 50 m Ω to the contact resistance shown in the datasheet.
- 8/. Add 0.025 oz (0.71 g) to the weight of the relay assembly shown in the datasheet.
- 9/. M3 pad to be used only when the relay has a center pin (e.g. ER411M3-12A, 722XM3-26.)

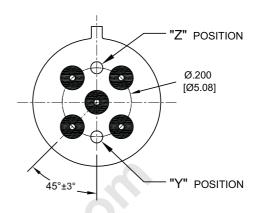

Appendix A: Ground Pin Positions

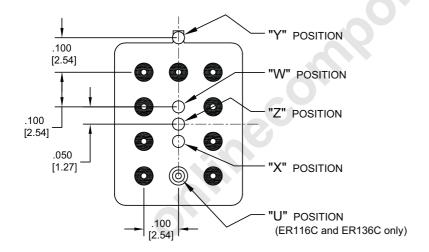

TO-5 Relays:
