SAS

Amphenol is an active member of the Serial Attached SCSI (SAS) Standard (T10/SFF) working group and offers the broadest product lines of SAS.

SAS was developed to address anticipated I/O and direct attach storage requirements. It provides universal interconnect with SATA, while offering logical SCSI compatibility along with SCSI reliability, performance and manageability. SAS is a point-to-point architecture, distinct from parallel technologies such as Fiber Channel and SCSI. A point-to-point architecture establishes a link directly from the controller to a disk drive or through an expander switching matrix. SAS complements SATA by adding dual porting, full duplex, device addressing and it offers high reliability, performance and data availability services, as well as logical SCSI compatibility, SAS customers can choose to deploy cost-effective SATA drives in a SAS storage environment.

Features:

- Straight, right angled and side exit over-molded assemblies.
- 26 and 30 AWG cable available.
- Unified data and power assembly.

SAS / SATA

SATA

Serial ATA is the proactive evolution of the ATA interface from a parallel bus to a serial bus architecture. This architecture overcomes the electrical constraints that are increasing the difficulty of continued speed enhancements for the classic parallel ATA bus.

Features:

- Straight, right angled and reverse right angled cable exits.
- Crossover cable.
- Combo data & power assembly.
- Latched version available

Slimline SATA

Slimline SATA has been especially designed for slimline optical disk drives in notebooks, desktops and servers. Slimline SATA connectors and cable assemblies are more compact than common SATA, and can therefore be applied to a smaller space.

eSATA

Amphenol eSATA provides higher speed and better connection for external storage solutions in computer and consumer applications. eSATA 3Gb/s speed is much higher than that of USB and IEEE1394.

Power SATA

Power SATA cable assemblies are a version of SATA cable assemblies used to provide HDD's or optical drives with power from the power modules of end devices such as Desktops, Notebooks, Servers, Networks and RAID Storages, STB's. Game machines etc. Power SATA cable assemblies can supply power for several HDD's at the same time.

DVI

The Digital Visual Interface (DVI) is a video interface standard designed to maximize the visual quality of digital display devices such as flat panel LCD computer displays and digital projectors. It was developed by an industry consortium, the Digital Display Working Group (DDWG). It is designed for carrying uncompressed digital video data to a display. It is partially compatible with the High-Definition Multimedia Interface (HDMI) standard in digital mode (DVI-D).

DVI is the only widespread video standard that includes analog and digital transmission options in the same connector.

DisplayPort

DisplayPort is an industry standard developed to accommodate the growing broad adoption of digital display technology within the PC and Consumer Electronics industries. Display Port is intended to be used primarily between a computer and its display monitor, or a computer and a home-theater system. It consolidates internal and external connection methods to reduce device complexity, and enables the next generation of displays to feature higher color depths, refresh rates and display resolution.

Key Features:

- Higher performance than dual link DVI, with a total data rate of 10.8 Gb/s
