

DUAL POLARITY HIGH VOLTAGE MODULES

0 to + and - 50 through + and - 6000 VDC, @ 1.5, 3, and 10 Watts

CT SERIES

The CT Series is a line of compact high voltage modules that provide + and - 50 volts through + and - 6000 volts at 1.5w, 3w, and 10 watts*¹ with an output center tap feature which, when grounded, provides both positive and negative high voltage outputs from one, compact, low cost module. All CT models feature an isolated output, low ripple, and low EMI/RFI by incorporating a quasi-sinewave oscillator, fully enclosed transformer, low leakage current and input/output filtering. Positive and negative load currents can be balanced to keep positive and negative voltages approximately equal. Call, fax or e-mail with your requirements for immediate attention. Technical assistance is readily available.

TYPICAL INPUT vs. OUTPUT VOLTAGES

- *Notes
1. At Maximum Rated Output Voltage
 2. Measured between the + and - output terminals.
 3. Output Voltage is load dependent. Under light or no load conditions, reduce input voltage so maximum rated output voltage is not exceeded.
 4. Specifications after 30 minute warm-up, full load, at 25°C unless otherwise noted.
 5. The rated output current is available at full output voltage and must be derated proportionally as the input voltage decreases. For example: a 500V, 1.5W unit, rated at 3mA at 500V will provide 1.5mA at 250V out.

MODEL* ⁴	POWER	OUTPUT* ³ VOLTAGE	OUTPUT* ⁵ CURRENT	INPUT VOLTAGE	INPUT* ¹ CURRENT (NO LOAD)	INPUT* ¹ CURRENT (FULL LOAD)	RIPPLE* ² P-P
G01CT	1.5w	0 to +/- 50v	15 mA	0 to 12v	<100 mA	<250 mA	<1.75 %
