PRODUCT DATA SHEET

Allenuts®

High quality, multi-purpose, internally-threaded fasteners afford compact holding power

A

B

C

D

Applications

- A. Free application of Allenut in recess with mating member a blind bolt
- B. Allenut used free with flat head capscrew in flush application to obtain surfaces unbroken by projections
- C. Semi-flush applications showing Allenut used free in counterbored hole with stud
- D. Allenut in anchored position used in non-hardened steel, cast iron and the softer non-ferrous metals. Allenuts can be pressed (or drawn by wrenching mating member) into surrounding material to give a strong heat treated thread having greatly increased load carrying capacity. Allenuts can also be molded into plastics, ceramics, fiber and similar materials to provide a high strength thread.

Benefits:

- 12 pt (double hex) socket has 12 drawing points for easier hex key engagement
- Knurled surface allows finger "spinning" to point where wrenching force is required
- Allenuts serve as ready tapped holes, or to replace stripped or worn threads
- Available in a full range of popular sizes, UNC and UNF threads series.
- Allenuts may offer designers significant savings in space weight and materials
- Material: Heat-treated steel or austenitic stainless steel

DIAMETER THREADS PER INCH	KEY SIZE	PRODUCT CODE NUMBER
#4-40	1/8	06032
#5-40	1/8	06034
