

Commercial CCS-32

High Power DC-12GHz SPDT Switch

Failsafe

The CCS-32 is a broadband, SPDT Switch designed to switch microwave signals from a common input to either of two outputs. Designed for 50 Ohms transmission lines. The switch is available with either failsafe or latching type actuators operating on 28 VDC or other special DC voltages. The primary advantage of this switch over the miniature versions, shown on previous pages is more connector options and higher power handling capability.
