

General

The filter are outstanding for their big field of applications, because the filters are designed with single lines without coupling effects. By using of single chokes instead of current compensated chokes the insertion loss values will not be reduced at all operating current conditions, also at operating of artificial mains network (AMN) or other equipment with high leakage currents.

Design

The electric components are enclosed in a RF-tight stainless steel housing. Screw-type conduit fittings are used for the cable entry. The RF-tight covering of the opening for the connections is obtained by means of specially formed covers. Neutral conductor and conductor are connected via threaded bolts. The space around the fixing holes is left unpainted in order to ensure good RF contacting to metal areas (ground).

Protective measures

Due to the high capacitances between conductors and safety conductor, protective measures in accordance with VDE 0100 and VDE 0875 (additional ground connection) are necessary if the relevant VDE specifications do not include adequate measures.

In order to discharging of the capacitors after turning off, resistors are incorporated into the filter.

General technical data

Rated Voltage U_R	440/250 V	Line / Line Line / Ground
Rated frequency f_R	50 / 60 Hz	
Rated current I_R	see page 2	referred to +40°C ambient temperature
Test voltage	1200 V dc, 2 sec. 1200 V dc, 2 sec.	Line / Line Line / Ground
DC resistance R_{DC}	see page 2	each line
Power dissipation P_V	see page 2	at rated current
Voltage drop / line ΔU	< 1 %	of rated voltage 440 / 250 V
Cap. current / line I_B	see page 2	at 230V / 50Hz
Max. allowed harmonic dist. (THD)	8 %	according to EN 50160
Permissible ambient temperature	-25 to +40°C	
Approx. weight	see page 2	
Mechanical version	C	with cable glands at both sides or connection by flexible tube
	D	for connecting directly at the mounting wall

RF-tight connection of the filter at version "D" to the mounting wall

RF-tight connection with flexible conduit diam. 25 mm

Note: The bending radius of the flexible conduit depends on the used type of cable

Flexible conduit with diam. 25 mm, ordering code B84298A0042L...

Lock nut PG 29 (DIN 46320, spanner width 41)

- 1) Min. bending radius 60 mm
- 2) Hole in der Shielding wall $\varnothing 37^{+0.5}$, $\varnothing 55^{+5}$ metallic bare

Complete ordering code with the length L1:

At length **98 cm** the complete ordering code is B84298A0042**L098**

Lengths in following steps available:

- 6 cm to 100 cm in 2 cm steps
- 100 cm to 400 cm in 5 cm steps
- 400 cm to 600 cm in 10 cm steps
- 600 cm to 980 cm in 20 cm steps

Please Note:

After removing the flexible conduit insert new RF-Sealings!

Ordering code of a set with 2 RF-sealings is B84298M0029C901
