

# D10040230PH1

GaAs/GaN Power Doubler Hybrid 45MHz to 1000MHz

The D10040230PH1 is a Hybrid Power Doubler amplifier module. The part employs GaAS pHEMT die and GaN pHEMT die, has high output capability, and is operated from 45MHz to 1000MHz. It provides excellent linearity and superior return loss performance with low noise and optimal reliability.

# **Ordering Information**

D10040230PH1 Box with 50 pieces

# **Absolute Maximum Ratings**

| Parameter                           | Rating      | Unit |
|-------------------------------------|-------------|------|
| RF Input Voltage (single tone)      | 60          | dBmV |
| DC Supply Over-Voltage (5 minutes)  | 30          | V    |
| Storage Temperature                 | -40 to +100 | °C   |
| Operating Mounting Base Temperature | -30 to +100 | °C   |

Package: SOT-115J

#### **Features**

- Excellent Linearity
- Superior Return Loss Performance
- Extremely Low Distortion
- Optimal Reliability
- Low Noise
- Unconditionally Stable Under All Terminations
- Extremely High Output Capability
- 22.5dB Min. Gain at 1GHz
- 450mA Max. at 24VDC

### **Applications**

 45MHz to 1000MHz CATV Amplifier Systems

Caution! ESD sensitive device.

RoHS (Restriction of Hazardous Substances): Compliant per EU Directive 2011/65/EU.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implie

## **Nominal Operating Parameters**

| Parameter                       | Specification |       | Unit  | Condition |  |  |
|---------------------------------|---------------|-------|-------|-----------|--|--|
| raiailletei                     | Min           | Тур   | Max   | Unit      | Condition  |  |
| General Performance             |               |       |       |           | $V+ = 24V$ ; $T_{MB} = 30^{\circ}C$ ; $Z_{S} = Z_{L} = 75\Omega$                                   |  |

| cso                             |               | -71   | -68   | dBc       |  |  |
| CIN                             | 63            | 66    |       | dB        |  |  |

<sup>1.</sup> The slope is defined as the difference between the gain at the start frequency and the gain at the stop frequency.

Composite Second Order (CSO) - The CSO parameter (both sum and difference products) is defined by the NCTA.

Composite Triple Beat (CTB) - The CTB parameter is defined by the NCTA.

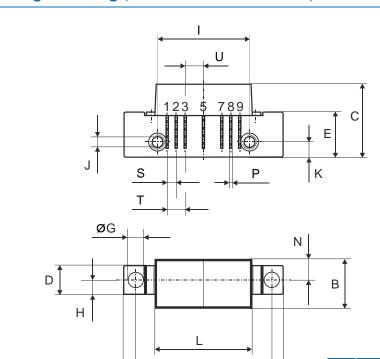

Cross Modulation (XMOD) - Cross modulation (XMOD) is measured at baseband (selective voltmeter method), referenced to 100% modulation of the carrier being tested.

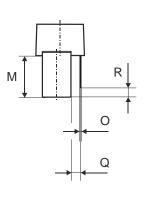

Carrier to Intermodulation Noise (CIN) - The CIN parameter is defined by ANSI/SCTE 17 (Test Procedure for carrier to noise).

<sup>2. 79</sup> analog channels, NTSC frequency raster: 55.25MHz to 547.25MHz, +43dBmV to +50dBmV tilted output level, plus 75 digital channels, -6dB offset relative to the equivalent analog carrier.
