

3.3V Triple and Quad Video Amplifiers

June 2002

FEATURES

- Single Supply Operation from 3V to 12.6V
- Small (3mm × 5mm) MSOP 10-Lead Package
- Internal Resistors for a Gain of Two
- 340V/μs Slew Rate
- 110MHz –3dB Bandwidth
- 30MHz Flat to 0.25dB
- 3% Settling Time: 20ns
- Input Common Mode Range Includes Ground
- Rail-to-Rail Output
- High Output Drive: 60mA
- Operating Temperature Range: –40°C to 85°C
- 15-Bit RGB, 1024 × 768 Resolution

APPLICATIONS

- Automotive Displays
- RGB Amplifiers
- Coaxial Cable Drivers
- Low Voltage High Speed Signal Processing
- Set Top Boxes

LT, LTC and LT are registered trademarks of Linear Technology Corporation.

DESCRIPTION

The LT[®]6550/LT6551 are 3.3V triple and quad high speed video amplifiers. These voltage feedback amplifiers drive double terminated 50Ω or 75Ω cables and are configured for a fixed gain of 2, eliminating six or eight external gain setting resistors. The LT6550/LT6551 feature 110MHz –3dB bandwidth, high slew rates and fast settling, making them ideal for RGB video processing.

The LT6551 quad is designed for single supply operation and the LT6550 triple can be used on either single or split supplies. On a single 3.3V supply, the input voltage range extends from ground to 1.55V and the output swings to within 400mV of the supply voltage while driving a 150Ω load. These features, combined with the ability to accept RGB video signals without the need for AC coupling or level shifting of the incoming signals, make the LT6550/LT6551 an ideal choice for low voltage video applications.

Both the LT6550 and LT6551 are available in the small 10-Pin MSOP package and utilize a flow-thru pin out. The small footprint, results in a compact high performance video amplifier solution.

TYPICAL APPLICATION

3.3V Single Supply RGB Plus SYNC Cable Driver

Output Step Response

65501i

LT6550/LT6551

ABSOLUTE MAXIMUM RATINGS

(Note 1)

Total Supply Voltage

LT6550 (V_{CC} TO V_{EE}) 12.6V

LT6551 (V_{CC} TO GND) 12.6V

Input Current (Note 9) $\pm 10\text{mA}$

Output Short-Circuit Duration (Note 2) Indefinite

Operating Temperature Range -40°C to 85°C

Specified Temperature Range (Note 3)

LT6550C/LT6551C 0°C to 70°C

LT6550I/LT6551I -40°C to 85°C

Maximum Junction Temperature 150°C

Storage Temperature Range -65°C to 150°C

Lead Temperature (Soldering, 10 sec) 300°C

ELECTRICAL CHARACTERISTICS

Note 1: Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.

Note 2: A heat sink may be required to keep the junction temperature below absolute maximum. This depends on the power supply voltage and how many amplifiers are shorted.

Note 3: The LT6550C/LT6551C are guaranteed to meet specified performance from 0°C to 70°C and are designed, characterized and expected to meet specified performance from –40°C to 85°C but are not tested or QA sampled at these temperatures. The LT6550I/LT6551I are guaranteed to meet specified performance from –40°C to 85°C.

Note 4: Thermal resistance varies depending upon the amount of PC board metal attached to Pin 5 of the device. θ_{JA} is specified for a 2500mm² test board covered with 2oz copper on both sides.

Note 5: Gain is measured by changing the input voltage, and dividing the change in output voltage by the change in input voltage.

Note 6: Minimum supply voltage is guaranteed by the PSRR test.

Note 7: The supply current specification includes additional output current through the internal feedback and gain resistor.

Note 8: Guaranteed by correlation to slew rate at 5V and $\pm 5V$.

Note 9: The inputs are protected from ESD with diodes to the supplies.

APPLICATIONS INFORMATION

Amplifier Characteristics

Figure 1 shows a simplified schematic of one channel of the LT6551 quad. Resistors R_F and R_G provide an internal gain of 2. (The LT6550 triple is a slight variation with the gain setting resistor, R_G , connected to a separate ground pin). The input stage consists of transistors Q1 to Q8 and resistor R1. This topology allows for high slew rates at low supply voltages. There are back-to-back series diodes, D1 to D4, across the + and – inputs of each amplifier to limit the differential input voltage to $\pm 1.4V$. R_{IN} limits the current through these diodes if the input differential voltage exceeds $\pm 1.4V$. The input stage drives the degeneration resistors of PNP and NPN current mirrors, Q9 to Q12, that convert the differential signals into a single-ended output. The differential drive generator supplies current to the output transistors that swing from rail-to-rail.

Input Voltage Range

The input voltage range is V_{EE} to $(V_{CC} - 1.75V)$ over temperature. If the device is operated on a single 3V supply

the maximum input is $(3V - 1.75V)$ or 1.25V, and the internal gain of two will set the output voltage to 2.5V. Increasing the input beyond 1.25V will force the device out of its linear range, no longer a gain of 2, and the output will not increase beyond 2.5V. At a higher supply voltage, i.e. 5V, the maximum input voltage is $5V - 1.75V$ or 3.25V. However, due to the internal gain of 2, the output will clip with a lower input voltage. For linear unclipped operation the minimum input voltage is $(V_{OUT\ Min})/2$ and the maximum input voltage is $(V_{OUT\ Max})/2$ or $(V_{CC} - 1.75V)$, whichever is less.

ESD

The LT6550/LT6551 have reverse-biased ESD protection diodes on all inputs and outputs as shown in Figure 1. If these pins are forced beyond either supply, unlimited current will flow through these diodes. If the current is limited to 10mA or less, no damage to the device will occur.

PACKAGE DESCRIPTION

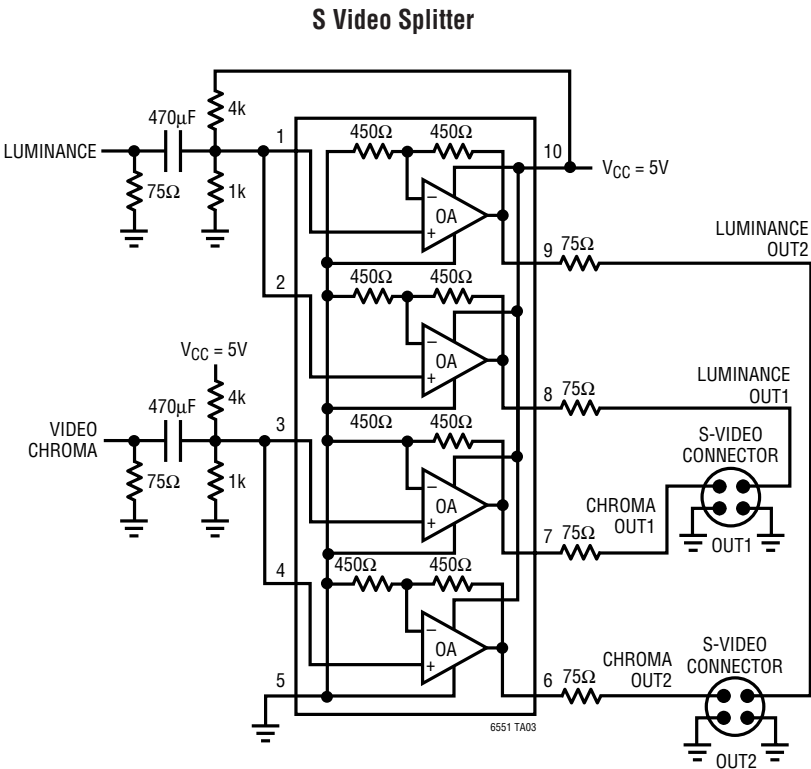

MS Package
10-Lead Plastic MSOP
 (Reference LTC DWG # 05-08-1661)

NOTE:

1. DIMENSIONS IN MILLIMETER/(INCH)
2. DRAWING NOT TO SCALE
3. DIMENSION DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS.
MOLD FLASH, PROTRUSIONS OR GATE BURRS SHALL NOT EXCEED 0.152mm (.006") PER SIDE
4. DIMENSION DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSIONS.
INTERLEAD FLASH OR PROTRUSIONS SHALL NOT EXCEED 0.152mm (.006") PER SIDE
5. LEAD COPLANARITY (BOTTOM OF LEADS AFTER FORMING) SHALL BE 0.102mm (.004") MAX
