RF Solutions for the Automotive Market

Introduction

The automotive industry has been revolutionized with the increased adoption of telematics in vehicles including GPS, Cellular, Bluetooth and Satellite Radio. No longer are satellite navigation systems and sophisticated in-vehicle entertainment confined solely to the luxury end of the market.

As telematic advancements become more reliable, available and inexpensive, vehicles are transforming into an intelligent platform for enabling mobile life. With these recent advancements in communications technology and increased consumer demand for a diverse array of on-board telematics services, RF communications systems have become integral components of today's automobile, trucking, watercraft, motorcycle and off-road construction markets.

To keep RF interconnection costs low, and to ensure high levels of electrical and mechanical performance for telematics applications, such as Global Positioning Satellite, Satellite Radio, Vehicular Internet Access, Remote vehicle diagnostics and Bluetooth, the worldwide automotive industries have standardized a high-performing, cost-effective RF connector based on the FAKRA and USCAR standards.

Utilizing a modified metal SMB connector embedded within a plastic housing that can be designed with multiple color codes for easy identification, FAKRA connectors are designed to perform up to 6 GHz and meet the particular mechanical and environmental requirements of the automotive industry. Amphenol RF also offers a variety of connectors for board-to-board, PCB interfaces, and traditional antenna interfaces.

Technologies Supported

AM/FM Radio: Antenna technology that supports GPS and Satellite Radio is the same antenna that will support AM/FM radio. This combined antenna capability not only reduces the number of external antennas on the vehicles, but offers standardization among the interconnects.

Satellite Radio: Originating at a broadcast center, the broadcast signal is beamed from earth-station antennas to broadcast satellites. These satellites don't move and are positioned more than 22,000 miles above the earth in geo-stationary orbit. Their beams combine to span the entire contiguous U.S. while remaining stationary with respect to the land below.

GPS (Global Positioning System): A worldwide MEO satellite navigational system formed by 24 satellites orbiting the earth and their corresponding receivers on the earth. The GPS satellites continuously transmit digital radio signals that contain data on the satellites' location and the exact time to the earth-bound receivers.

Cellular/PCS (Personal Communications Service): the U.S. Federal Communications Commission (FCC) term used to describe a set of digital cellular technologies being deployed in the U.S. It is also referred to as digital cellular.

Bluetooth: A short-range radio technology aimed at simplifying communications among Internet devices, between devices and the Internet. It also aims to simplify data synchronization between Internet devices and other computers.

Wireless Remote: Remote starting, remote keyless entry and door/window controls are all supported by our FAKRA products.

Vehicle Controls: Adaptive Cruise Control, Collision Avoidance Systems and DSRC (Dedicated Short Range Communications) are all evolving technologies that utilize FAKRA.

WiFi: Many new automotive models are incorporating WiFi in to their Infotainment offerings. Our FAKRA connectors support this emerging technology.

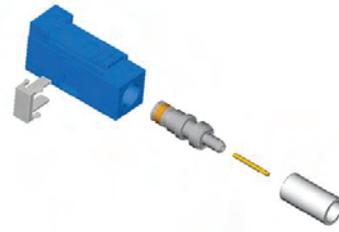

Product Overview

FAKRA Generation 1.0, 2.0, and 2.5

Product Overview

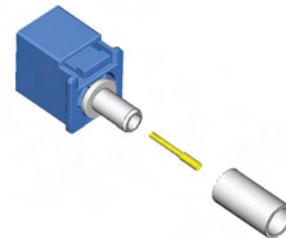

GENERATION 1.0

FAKRA Generation 1.0 utilizes a modified metal SMB connector embedded within a plastic housing unit for ease of identification and assembly. These plastic housings are designed with visually and mechanically coded and keyed tooling to eliminate assembly errors. Our standard FAKRA connectors are designed to perform up to 6 GHz and meet the electrical, mechanical and environmental standards of the automotive industry. Generation 1.0 typically features five separate component parts.

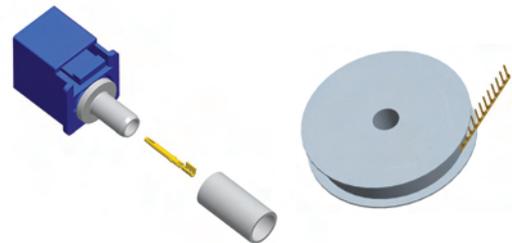

GENERATION 2.0

FAKRA Generation 2.0 offers reduced installation costs for our customers via a pre-assembled housing unit. This pre-assembled housing eliminates two loose components and their associated assembly and handling costs. Due to this component reduction, Generation 2.0 features three separate components to install versus Generation 1.0's five separate components.

GENERATION 2.5

FAKRA Generation 2.5 offers the same pre-assembled housing units and design improvements as Generation 2.0, but center contacts are provided on a tape and reel for automated distribution and placement.

Cable Assembly Instructions

For your convenience and to insure that you have the latest information, cable assembly instructions are available online at www.amphenorlf.com. Simply type in the cable assembly instruction number given with each part number and you will be directed to the correct cable assembly instruction.

FAKRA / USCAR Product Specifications

ELECTRICAL

Impedance		50 Ω nominal
Frequency Range		DC - 6 GHz (optimized for DC - 4 GHz)
Performance Spec		
V.S.W.R		DC - 2 GHz 2 GHz - 4 GHz
	<i>spec requirement</i>	1.40 max 1.50 max
Insertion Loss	<i>spec requirement</i>	≤ 0.3 dB max from DC - 3 GHz
Insulation Resistance		1000 M Ω min
Contact Resistance	<i>center contact</i>	< 40 m Ω
	<i>outer contact</i>	< 40 m Ω
Dielectric Withstanding Voltage	<i>at sea level</i>	> 800 VRMS (Interface only; may be cable limited)

MECHANICAL

Durability (matings)		100 min
Plastic Housing - Engagement Force		≤ 40 N (Single FAKRA)
Plastic Housing - Disengagement Force		≥ 35 N (Single FAKRA)
Cable Retention Force		≥ 110 N
Coding		14 mechanical and colored codings
Interface		USCAR-18, DIN

ENVIRONMENTAL

Temperature Range	<i>operating</i>	-40 / +100° C
Thermal Shock		MIL-STD-202, Method 107, Cond B (-55 / +125° C) or USCAR-2, para 5.6.1
Vibration		MIL-STD-202, Method 204, Cond B; (15g) or USCAR-2, para 5.4.6
Shock		MIL-STD-202, Method 213, Cond B (75g, 6 ms, 1/2 sine) or USCAR-2, para 5.4.6

MATERIALS

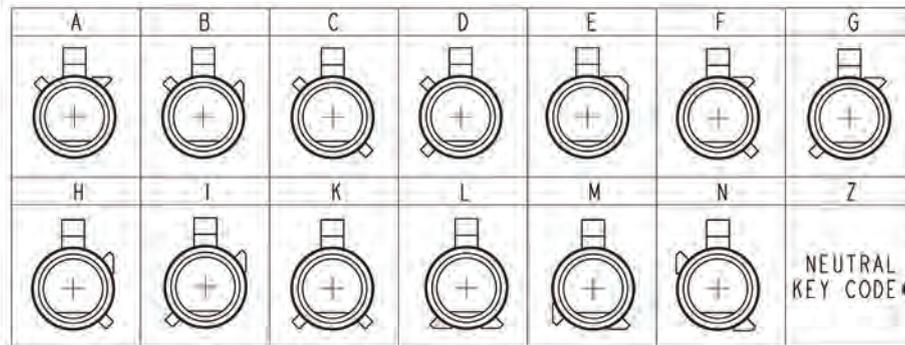

Plastic Housing	<i>jacks</i>	Nylon, PBT or PPE
	<i>in-line plugs</i>	Nylon or PBT
	<i>PCB plugs</i>	Nylon
Secondary Locking Clip (if applicable)		PBT
Center Contact	<i>jack</i>	Beryllium Copper or Phosphor Bronze
	<i>plug</i>	Brass or Phosphor Bronze
Body		Brass, Zinc Alloy
Retainer Ring (if applicable)		Beryllium Copper
Ferrule		Copper Alloy
Insulator		TFE or TPX

PLATING

Center Contact		Gold
Body	<i>cable types</i>	Nickel
	<i>solder types</i>	Nickel, Gold, Tin
Ferrule		Nickel

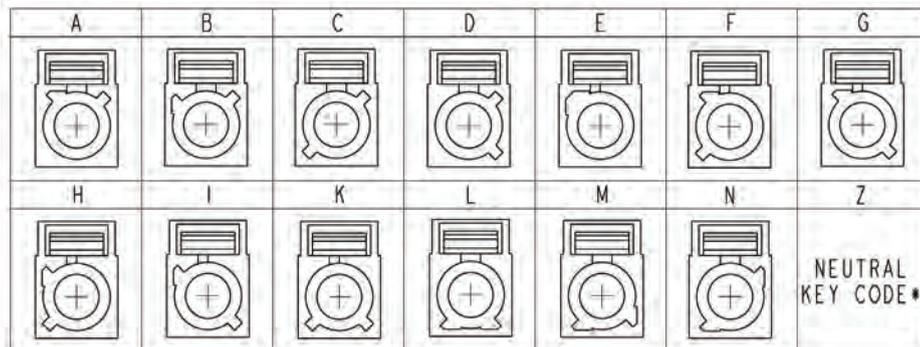

Specifications

Plug Keying Options

* "Z" or neutral key code is available that mates with the majority of FAKRA connections. Consult factory for intermateability options.

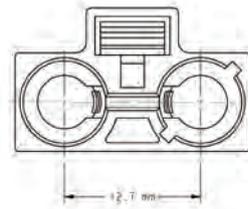

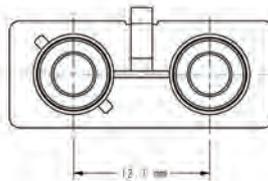

Jack Keying Options

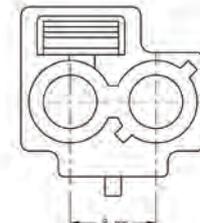

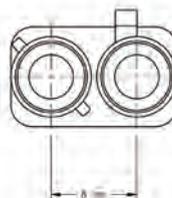

* "Z" or neutral key code is available that mates with the majority of FAKRA connections. Consult factory for intermateability options.

		Ferrule (Single)	HX4	227-944	HX23	227-HX23	Y188	227-1221-11	
		Ferrule (Dual)	HX4	227-944	HX23	227-HX23	Y1832	227-Y1832	

Please note: The dual ferrule die sets can be used on the single ferrule designs.

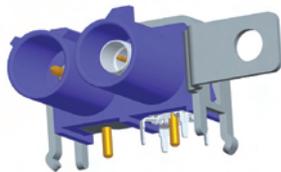

*Depth setting should be used at the minimum setting which will yield 5 lbs minimum pull-off force.
Depth setting requirements depend upon several factors including cable manufacturer and grade.

FAKRA connectors for Cable Groups 65 and 71 are currently available on tape and reel for use with Generation 2.5.
Please refer to specific Cable Assembly Instructions for tooling information.

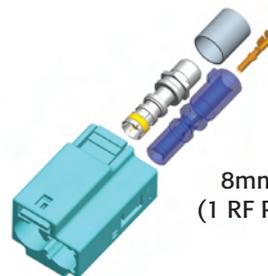

Through our global engineering group and world-wide support, Amphenol RF is able to provide custom solutions for unique FAKRA challenges as well as other RF, coaxial products and cable assemblies.

4-Way Plug

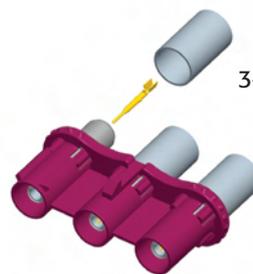

8mm Hybrid PCB Plug
(1 RF Port, 1 DC Port)

8mm Hybrid Jack
(1 RF Port, 1 DC Port)

3-Way Flat Pack Jack

3-Way Flat Pack Plug

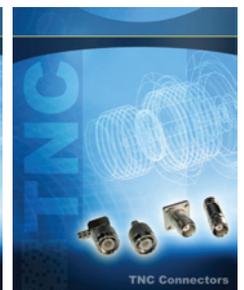

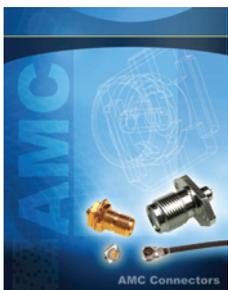

12.7mm Hybrid Jack
(1 RF Port, 1 DC Port)

12.7mm Hybrid Plug
(1 RF Port, 1 DC Port)

Panel-mount Plug
