

TLK111 Customer EVM

This user's guide details the design and operation of the evaluation module (EVM) for the TLK111.

1 TLK111 EVM Purpose and Content

The Industrial Ethernet TLK111CUSEVM provides Texas Instruments customers a platform to quickly design and market systems containing the TLK111 device. Customers are encouraged to copy EVM components to expedite their design process. The TLK111CUSEVM operates with only a single voltage (5V from the MII). All other voltages are internally produced.

The EVM kit contains:

- TLK111CUSEVM unit
- Printed copy of this user's guide
- TLK111CUSEVM schematic

1.1 EVM Use

The TLK111 supports an IEEE 802.3u 100BASE-FX Fiber Interface. This ability was not implemented in this customer EVM. For fiber performance evaluation, a new customer EVM is being developed.

2 Information and Specifications

This section contains the specifications of the TLK111CUSEVM card, as well as a description of the card's interfaces, connectors, jumpers, and LEDs.

2.1 Usage Setup and Configuration

Power for the TLK111CUSEVM is supplied via a MII connector.

- If 5V is supplied, the on-board voltage regulator, U1, converts 5V to 3.3V for the device.
- If 3.3V is supplied from the MII connector, assemble R59 and remove R56.
- Make sure the J2 jumper is installed in order to supply 3.3V to the magnetic CT.
- Make sure J1 jumper is installed and configured to MII or RMII.

2.2 Address Settings

The PMD address TLK111CUSEVM Physical Layer device is set by the following jumpers:

- J7: PHY ID [0]
- J6: PHY ID [1]
- J5: PHY ID [2]

The default board setting for the PHY address is 01h. The board may be set to any PHY address 00h - 07h by adding jumpers J5 - J7.

2.3 TLK111CUSEVM Connections

[Table 1](#) describes the connections of the TLK111CUSEVM.

Table 1. TLK111CUSEVM Connections

Jumper	Name	Function
P1	MIU male connector	MIU interface
J1	MIU or RMII selector	Select between MIU mode or RMII mode
J14	RESET N	Reset the device
J2	Central tap voltage selector	Enable 3.3V supply to the central tap
U2	RJ45	RJ45 ethernet connector
J5 - J7	PHY ID[0:2]	Configure PHY ID address (default = addr 01h)
J15 (Not populated)	25M out	25M clock output
J10	RMII enable	Enable RMII (default = MIU)
J8	CFG CROSSOVER	Disable AMDIX (default = AMDIX ON)
J3	CFG ANEG MODE	See description below
J4	AFG ANEG SPD 0	See description below
J5	AFG ANEG SPD 1	See description below

Table 2. TLK111CUSEVM Aneg Modes Connections

AN-EN	AN_1	AN_0	Forced Mode
0	0	0	10BT, Half duplex
0	0	1	10BT, Full duplex
0	1	0	100BT, Half duplex
0	1	1	100BT, Full duplex

Table 2. TLK111CUSEVM Aneg Modes Connections (continued)

AN-EN	AN_1	AN_0	Forced Mode
AN-EN	AN_1	AN_0	Advertised Mode
1	0	0	10BT, Half or Full duplex
1	0	1	100BT, Half or Full duplex
1	1	0	10BT, 100BT, Half duplex
1	1	1	10BT, 100BT, Full duplex

3 TLK111CUSEVM Specification

3.1 Overview

The TLK111CUSEVM platform from Texas Instruments allows a customer to evaluate the TLK111 device and demonstrate the advanced features described in the TLK111 datasheet.

The EVM supports 10/100 Base-T and is IEEE 802.3 standard compliant.

The TLK111CUSEVM operates with a single supply (5V or 3.3V) from the MII. All other voltages required for the TLK111 are internally generated in the device.

The TLK111CUSEVM is designed to work in industrial temperatures.

3.2 Required Resources

Any equipment that provides a standard IEEE 802.3, Clause 22 MII DTE interface, such as a SmartBits/Netcom box.

3.3 Features

The TLK111CUSEVM features include:

- Industrial temperature rating: (-40°C to 85°C)
- Industrial temperature external magnetics
- Control and status:
 - Configurable 8 PHY Addresses – 01h (default) or any other address between 00h - 07h using jumpers as describes in [Table 1](#)
 - 8 LEDs – 2 power, 6 status LEDs (speed, link, and active data)
- Strap options:
 - MII or RMII jumper (MII disable)
 - Resistor strapping options:
 - Configurable PHY addresses 08h - 31h
 - CFG_ANEG_MODE
 - CFG_ANEG_SPD_0,1
 - CFG_CROSSOVER
 - RESET_N jumper
- Connections for the following interfaces:
 - MII connector
 - RJ-45 connector
- Single-sided component placement
- On-board clock – crystal or oscillator dual footprint
- On-board power supplied by MII connector only, resistors to configure 5V or 3.3V operation

4 Software

The EVM does not require any specific software and can be controlled with networking equipment that support a MII interface. However for SmartBits users, TI can provide a proprietary GUI that simplifies the controllability of the TLK111CUSEVM through SmartBits and allows advanced features such as a cable diagnostic tool.

Evaluation Board/Kit Important Notice

Texas Instruments (TI) provides the enclosed product(s) under the following conditions:

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. Persons handling the product(s) must have electronics training and observe good engineering practice standards. As such, the goods being provided are not intended to be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including product safety and environmental measures typically found in end products that incorporate such semiconductor components or circuit boards. This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and therefore may not meet the technical requirements of these directives or other related directives.

Should this evaluation board/kit not meet the specifications indicated in the User's Guide, the board/kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies TI from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge.

EXCEPT TO THE EXTENT OF THE INDEMNITY SET FORTH ABOVE, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

TI currently deals with a variety of customers for products, and therefore our arrangement with the user **is not exclusive**.

TI assumes **no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein**.

Please read the User's Guide and, specifically, the Warnings and Restrictions notice in the User's Guide prior to handling the product. This notice contains important safety information about temperatures and voltages. For additional information on TI's environmental and/or safety programs, please contact the TI application engineer or visit www.ti.com/esh.

No license is granted under any patent right or other intellectual property right of TI covering or relating to any machine, process, or combination in which such TI products or services might be or are used.

FCC Warning

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

EVM Warnings and Restrictions

It is important to operate this EVM within the input voltage range of 5 V or 3.3 V and the output voltage range of N/A V to N/A V .

Exceeding the specified input range may cause unexpected operation and/or irreversible damage to the EVM. If there are questions concerning the input range, please contact a TI field representative prior to connecting the input power.

Applying loads outside of the specified output range may result in unintended operation and/or possible permanent damage to the EVM. Please consult the EVM User's Guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative.

During normal operation, some circuit components may have case temperatures greater than 60° C. The EVM is designed to operate properly with certain components above 60° C as long as the input and output ranges are maintained. These components include but are not limited to linear regulators, switching transistors, pass transistors, and current sense resistors. These types of devices can be identified using the EVM schematic located in the EVM User's Guide. When placing measurement probes near these devices during operation, please be aware that these devices may be very warm to the touch.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
