

Blackfin® A-V EZ-Extender® Manual

Revision 2.0, April 2006

Part Number
82-000870-01

Analog Devices, Inc.
One Technology Way
Norwood, Mass. 02062-9106

Copyright Information

©2006 Analog Devices, Inc., ALL RIGHTS RESERVED. This document may not be reproduced in any form without prior, express written consent from Analog Devices, Inc.

Printed in the USA.

Limited Warranty

The A-V EZ-Extender is warranted against defects in materials and workmanship for a period of one year from the date of purchase from Analog Devices or from an authorized dealer.

Disclaimer

Analog Devices, Inc. reserves the right to change this product without prior notice. Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use; nor for any infringement of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under the patent rights of Analog Devices, Inc.

Trademark and Service Mark Notice

The Analog Devices logo, Blackfin, VisualDSP++, EZ-KIT Lite, and EZ-Extender are registered trademarks of Analog Devices, Inc.

All other brand and product names are trademarks or service marks of their respective owners.

Regulatory Compliance

The Blackfin A-V EZ-Extender has been certified to comply with the essential requirements of the European EMC directive 89/336/EEC (inclusive 93/68/EEC) and, therefore, carries the “CE” mark.

The Blackfin A-V EZ-Extender had been appended to Analog Devices Development Tools Technical Construction File referenced “DSPTOOLS1” dated December 21, 1997 and was awarded CE Certification by an appointed European Competent Body and is on file.

The EZ-KIT Lite evaluation system contains ESD (electrostatic discharge) sensitive devices. Electrostatic charges readily accumulate on the human body and equipment and can discharge without detection. Permanent damage may occur on devices subjected to high-energy discharges. Proper ESD precautions are recommended to avoid performance degradation or loss of functionality. Store unused EZ-KIT Lite boards in the protective shipping package.

PREFACE

Thank you for purchasing the Blackfin[®] A-V EZ-Extender[®], Analog Devices, Inc. (ADI) extension board to the EZ-KIT Lite[®] evaluation system for ADSP-BF533, ADSP-BF537, and ADSP-BF561 Blackfin processors.

The Blackfin processors are embedded processors that support a Media Instruction Set Computing (MISC) architecture. This architecture is the natural merging of RISC, media functions, and digital signal processing characteristics towards delivering signal processing performance in a microprocessor-like environment.

The EZ-KIT Lite and A-V EZ-Extender are designed to be used in conjunction with the VisualDSP++[®] development environment. VisualDSP++ offers a powerful programming tool with new flexibility that significantly decreases the time required to port software code to a processor, reducing time-to-market.

To learn more about Analog Devices development software, go to <http://www.analog.com/processors/tools/>.

Product Overview

The Blackfin A-V EZ-Extender is a separately sold extension board that plugs onto the expansion interface of the ADSP-BF533, ADSP-BF537, or ADSP-BF561 EZ-KIT Lite evaluation system. The extension board aids the design and prototyping phases of ADSP-BF533, ADSP-BF537, or ADSP-BF561 processor targeted applications.

Product Overview

The board extends the capabilities of the evaluation system by providing a connection to a video decoder, a video encoder, multiple camera evaluation boards, a flat panel display, and a 3-stereo input channel, 2-stereo output channel audio codec.

The following is a list of the Blackfin A-V EZ-Extender interfaces.

- Analog audio interface
 - ✓ AD1836A Analog Devices 96 kHz audio codec
 - ✓ five 3.5 mm audio jacks, stacked in one connector
- Analog video interface
 - ✓ ADV7183B video decoder with three input RCA phono jacks
 - ✓ ADV7179 video encoder with three output RCA phono jacks
- OmniVision camera module interface
 - ✓ Connection to OmniVision camera evaluation modules, for example: OV6630AA
 - ✓ 32-pin, right angle, 0.1 in. spacing, female socket
- Micron camera module interface
 - ✓ Connection to Micron camera evaluation modules, for example: MT9V022
 - ✓ 26-pin, right angle, 0.1 in. spacing, female socket
- Kodak camera module interface
 - ✓ Connection to Kodak camera evaluation modules, for example: KAC-9628
 - ✓ 28-pin, right angle, 0.1 in. spacing, female socket

- Flat panel display interface (FPDI)
 - ✓ Connection to flat panel displays, for example, NL6448BC20-08E
 - ✓ DF9B-31S-1V connector

Before using any of the interfaces, follow the setup procedure in [“A-V EZ-Extender Setup” on page 1-1](#).

Example programs are available to demonstrate the capabilities of the Blackfin A-V EZ-Extender board.

Purpose of This Manual

The *Blackfin A-V EZ-Extender Manual* describes the operation and configuration of the components on the extension board. A schematic and a bill of materials are provided as a reference for future Blackfin processor board designs.

Intended Audience

This manual is a user’s guide and reference to the Blackfin A-V EZ-Extender. Programmers who are familiar with the Analog Devices Blackfin processor architecture, operation, and development tools are the primary audience for this manual.

Programmers who are unfamiliar with VisualDSP++ or EZ-KIT Lite evaluation software should refer to the *ADSP-BF533*, *ADSP-BF537*, or *ADSP-BF561 Evaluation System Manual*, VisualDSP++ online Help, and user’s or getting started guides. For the locations of these documents, refer to [“Related Documents”](#).

Manual Contents

The manual consists of:

- Chapter 1, “[A-V EZ-Extender Interfaces](#)” on page 1-1
Provides basic board information.
- Chapter 2, “[A-V EZ-Extender Hardware Reference](#)” on page 2-1
Provides information on the hardware aspects of the board.
- Appendix A, “[A-V Extender Bill Of Materials](#)” on page A-1
Provides a list of components used to manufacture the EZ-Extender board.
- Appendix B, “[A-V EZ-Extender Schematic](#)” on page B-1
Provides the resources to allow EZ-KIT Lite board-level debugging or to use as a reference design.

Appendix B now is part of the online Help. The PDF version of the *Blackfin A-V EZ-Extender Manual* is located in the Docs\EZ-KIT Lite Manuals folder on the installation CD. Alternatively, the schematics can be found on the Analog Devices Web site, www.analog.com/processors.

What's New in This Manual

This edition of the *Blackfin A-V EZ-Extender Manual* has been updated for the latest revision of VisualDSP++.

Technical or Customer Support

You can reach Analog Devices, Inc. Customer Support in the following ways:

- Visit the Embedded Processing and DSP products Web site at <http://www.analog.com/processors/technicalSupport>
- E-mail tools questions to processor.tools.support@analog.com
- E-mail processor questions to processor.support@analog.com (World wide support)
processor.europe@analog.com (Europe support)
processor.china@analog.com (China support)
- Phone questions to **1-800-ANALOGD**
- Contact your Analog Devices, Inc. local sales office or authorized distributor
- Send questions by mail to:
Analog Devices, Inc.
One Technology Way
P.O. Box 9106

USA

Supported Products

The Blackfin A-V EZ-Extender is designed as an extension board to the ADSP-BF533, ADSP-BF537, and ADSP-BF561 EZ-KIT Lite evaluation systems.

Product Information

You can obtain product information from the Analog Devices Web site, from the product CD-ROM, or from the printed publications (manuals).

Analog Devices is online at <http://www.analog.com>. Our Web site provides information about a broad range of products—analog integrated circuits, amplifiers, converters, and digital signal processors.

Title	Description
<i>ADSP-BF533 EZ-KIT Lite Evaluation System Manual</i> <i>ADSP-BF537 EZ-KIT Lite Evaluation System Manual</i> <i>ADSP-BF561 EZ-KIT Lite Evaluation System Manual</i>	Description of the EZ-KIT Lite features and usage. Note: For the ADSP-BF537 EZ-KIT Lite, there is additional <i>Getting Started with ADSP-BF537 EZ-KIT Lite</i>.
<i>VisualDSP++ User's Guide</i>	Description of VisualDSP++ features and usage
<i>VisualDSP++ Assembler and Preprocessor Manual</i>	Description of the assembler function and commands
<i>VisualDSP++ C/C++ Compiler and Library Manual for Blackfin Processors</i>	Description of the compiler function and commands for Blackfin processors
<i>VisualDSP++ Linker and Utilities Manual</i>	Description of the linker function and commands
<i>VisualDSP++ Loader and Utilities Manual</i>	Description of the loader function and commands

All documentation is available online. Most documentation is available in printed form.

Visit the Technical Library Web site to access all processor and tools manuals and data sheets:

<http://www.analog.com/processors/resources/technicalLibrary>.

Notation Conventions

Text conventions used in this manual are identified and described as follows.

Example	Description
Close command (File menu)	Titles in reference sections indicate the location of an item within the VisualDSP++ environment's menu system (for example, the Close command appears on the File menu).
{this that}	Alternative required items in syntax descriptions appear within curly brackets and separated by vertical bars; read the example as <i>this</i> or <i>that</i> . One or the other is required.
[this that]	Optional items in syntax descriptions appear within brackets and separated by vertical bars; read the example as an optional <i>this</i> or <i>that</i> .
[this,...]	Optional item lists in syntax descriptions appear within brackets delimited by commas and terminated with an ellipse; read the example as an optional comma-separated list of <i>this</i> .
.SECTION	Commands, directives, keywords, and feature names are in text with letter gothic font.
<i>filename</i>	Non-keyword placeholders appear in text with italic style format.
	Note: For correct operation, ... A Note provides supplementary information on a related topic. In the online version of this book, the word Note appears instead of this symbol.
	Caution: Incorrect device operation may result if ... Caution: Device damage may result if ... A Caution identifies conditions or inappropriate usage of the product that could lead to undesirable results or product damage. In the online version of this book, the word Caution appears instead of this symbol.
	Warning: Injury to device users may result if ... A Warning identifies conditions or inappropriate usage of the product that could lead to conditions that are potentially hazardous for the devices users. In the online version of this book, the word Warning appears instead of this symbol.

Additional conventions, which apply only to specific chapters, may appear throughout this document.

Notation Conventions

1 A-V EZ-EXTENDER INTERFACES

This chapter provides a setup procedure for the Blackfin A-V EZ-Extender, an EZ-KIT Lite (ADSP-BF533, ADSP-BF537 or ADSP-BF561), and an evaluation module. The chapter also describes each of the evaluation interfaces the extender supports.

The information is presented in the following order.

- [“A-V EZ-Extender Setup” on page 1-1](#)
- [“Analog Audio Interface” on page 1-2](#)
- [“Analog Video Interface” on page 1-3](#)
- [“Camera Module Interfaces” on page 1-4](#)
- [“Flat Panel Display Interface” on page 1-6](#)

A-V EZ-Extender Setup

It is very important to set up all of the components of the system containing the A-V EZ-Extender before applying power to that system.

Power your system when these steps are completed:

1. Read the applicable design interface section in this chapter—the text provides an overview of the capabilities of the interface.
2. Read [“System Architecture” on page 2-2](#) to understand the physical connections of the extension board. For detailed information, refer to [“A-V EZ-Extender Schematic” on page B-1](#).

Analog Audio Interface

3. Set the jumpers on the A-V EZ-Extender board. Use the block diagram in [Figure 2-1 on page 2-3](#) in conjunction with “Jumpers” on [page 2-7](#).
4. Set the switches and jumpers on the EZ-KIT Lite board. If not already, familiarize yourself with the documentation and schematics of the EZ-KIT Lite (see [“Related Documents”](#)). Compare the expansion interface signals of the A-V EZ-Extender board with the signals of the EZ-KIT Lite board to ensure there is no contention. For example, it may be necessary to disable other devices connected to the parallel peripheral interface (PPI) of the processor, change the routing of the PPI clocks and disable the push buttons.
5. Configure any other interfacing boards, for example, another EZ-Extender or camera evaluation board.

Analog Audio Interface

For an audio application, the Blackfin A-V EZ-Extender uses the AD1836A multichannel 96 kHz audio codec. The AD1836A is a high-performance single-chip codec that provides three stereo digital-to-analog converters (outputs) and two stereo analog-to-digital converters (inputs) using ADI’s patented multi-bit sigma-delta architecture. The board includes a serial peripheral interface (SPI) port, allowing the processor to adjust volume and other parameters. For a general overview of the audio interface connections, see [Figure 2-1 on page 2-3](#). For more detailed information, see [“A-V EZ-Extender Schematic” on page B-1](#).

SPORT0 of the expansion interface interfaces with the serial port of the AD1836A codec. The processor is capable of transferring data to the audio codec in time-division multiplexed (TDM) or I²S mode. The I²S mode allows the codec to operate at a 96 kHz sample rate but allows only two channels of output. TDM mode can operate at a maximum of 48 kHz

sample rate but allows simultaneous use of all input and output channels. To operate in I²S mode, the JP7.1/2 jumper must be installed. For more information, see “[I2S Enable Jumper \(JP7.1/2\)](#)” on page 2-13.

The internal registers of the AD1836A audio codec can be programmed via the SPI port of the processor. (For information on how to program the configuration registers, refer to the AD1836A datasheet.) The AD1836A codec reset comes either from a flag pin located at PPI1_D11 of the expansion interface or from the EZ-KIT Lite reset signal. For information on how to configure the reset, see “[AV_RESET Source Jumper \(JP9.1/3/5\)](#)” on page 2-14.

Before using the interface, follow the steps in “[A-V EZ-Extender Setup](#)” on page 1-1.

Example programs demonstrating the capabilities of the audio interface are included in the A-V EZ-Extender installation directory.

For more information about AD1836A, go to <http://www.analog.com> and search for AD1836A.

Analog Video Interface

The Blackfin A-V EZ-Extender supports video input and output applications with an on-board video encoder and decoder. The ADV7179 video encoder provides up to three output channels of analog video, while the ADV7183B video decoder provides up to three input channels of analog video. Both the encoder and the decoder connect to the PPI0 of the expansion interface, while the encoder also can connect to the PPI1 (if the processor has two PPI ports). For a general overview of the analog video interface connectors, see [Figure 2-1 on page 2-3](#). For more detailed information, see “[A-V EZ-Extender Schematic](#)” on page B-1.

Camera Module Interfaces

To use ADV7179 and ADV7183B, set up all of the jumpers related to the PPI data signals, frame sync signals, and clock signal. To program the internal register of the video devices, configure the two-wire interface signals (see “[TWI Source Selection Jumpers \(JP3.3/5/7, JP3.4/6/8\)](#)” on [page 2-7](#)). Finally, determine the source of the encoder or decoder reset (see “[AV_RESET Source Jumper \(JP9.1/3/5\)](#)” on [page 2-14](#).)

Before using the interface, follow the steps in “[A-V EZ-Extender Setup](#)” on [page 1-1](#).

Example programs demonstrating the capabilities of the analog video interface are included in the A-V EZ-Extender installation directory.

For more information about ADV7179 and ADV7183B, go to <http://www.analog.com> and search for ADV7179 or ADV7183B.

Camera Module Interfaces

The Blackfin A-V EZ-Extender has three right-angle connectors (J4, J6, and P4) with the control signals necessary to interface with three different manufactures camera evaluation modules. For a general overview of the camera module interface connections, see [Figure 2-1 on page 2-4](#). For more detailed information, see “[A-V EZ-Extender Schematic](#)” on [page B-1](#). [Figure 1-1](#) shows the orientation of the camera modules, as each camera connects to the board.

The J6 connector is designated for a Micron camera sensor evaluation module. The interface has been tested with the Micron MT9V022 camera evaluation module. For information about Micron camera sensors and evaluation boards, go to <http://www.micron.com>.

The J4 connector is designated for an OmniVision camera sensor evaluation module. The interface has been tested with the OmniVision OV6630AA camera evaluation module. For information about OmniVision camera sensors and evaluation boards, go to <http://www.ovt.com>.

Figure 1-1. Camera Orientation

The P4 connector is designated for a Kodak camera sensor evaluation module. The interface has been tested with the Kodak KAC-9628 camera evaluation module. For information about Kodak camera sensors and evaluation boards, go to <http://www.kodak.com>.

To connect the A-V EZ-Extender to a camera module, first determine the source of the PPI clock. To learn about possible clock settings, refer to “PPI Clock Setup Jumpers (JP4.1/2, JP4.3/4, JP4.5/6, JP4.7/8)” on page 2-10. Then set the direction of the data and the frame sync signals, which depend upon the camera’s configuration. The data must be set as an input to the PPI port. For more information, refer to “System Architecture” on page 2-2 and “Jumpers” on page 2-7.

Before using these interfaces, follow the steps in “A-V EZ-Extender Setup” on page 1-1.

Flat Panel Display Interface

Example programs demonstrating the capabilities of the camera module interface are included in the A-V EZ-Extender installation directory.

Flat Panel Display Interface

The flat panel display interface (FPDI) consists of a 31-pin DB9 connector linked to the PPI port and frame sync signals of the processor. For a general overview of the display interface connections, see [Figure 2-1 on page 2-4](#). For more detailed information, see the “A-V EZ-Extender Schematic” on page B-1.

A timing and functional analysis is required to determine if a specific LCD module can connect to the Blackfin A-V EZ-Extender. An example of a display that can connect to the extender is the NEC NL6448BC20-08 display (<http://www.ee.nec.de/>).

The power for the backlight feature of the LCD module must be provided by the customer (use the backlight inverter recommended by the manufacturer). It is also necessary to purchase a cable to connect the A-V EZ-Extender to the display. An example of such a cable is FDC31/xxxxAFF03 from Axon Cable (<http://www.axon-cable.com>, part number FDC31/xxxxAFF03). Different length cables are available.

Before using the interface, follow the steps in “A-V EZ-Extender Setup” on page 1-1.

Example programs demonstrating the capabilities of the flat panel display interface are included in the A-V EZ-Extender installation directory.

2 A-V EZ-EXTENDER

HARDWARE REFERENCE

This chapter describes the hardware design of the Blackfin A-V EZ-Extender.

The following topics are covered.

- [“System Architecture” on page 2-2](#)
Describes the configuration of the extension board and explains how the board components interface with the processor and EZ-KIT Lite.
- [“Jumpers” on page 2-7](#)
Describes the function of the configuration jumpers.

System Architecture

A block diagram of the Blackfin A-V EZ-Extender is shown in [Figure 2-1](#).

Not shown in the diagram is the analog audio interface, which is a simple connection between the serial port of the processor and the AD1836A audio codec. The audio interface connects directly to `SPORT0` of the expansion interface.

In [Figure 2-1](#), unidirectional buffers are shown as triangle symbols, while bidirectional buffers are shown as two overlapping triangles. For both types of buffers, the output-enable signal comes out of the top and is active `LOW`. For the bidirectional buffers, a second signal for the direction is shown. When this net is pulled `HIGH`, the buffer is driving in the direction of the arrow in the center, when `LOW`, the buffer is driving in the opposite direction.

 Before applying power to the system, follow the steps in “[A-V EZ-Extender Setup](#)” on page 1-1.

Video interfaces can be split into two main signal sets: `VID_IN` and `VID_OUT`. Both signal sets consist of a 16-bit data bus, two frame sync signals, and data clock. `VID_IN` connects to the video decoder and all of the camera interfaces. `VID_IN` connects only to the `PPIO` of the EZ-KIT Lite. `VID_OUT` connects to the video encoder and the flat panel display interface. On the expansion interface, `VID_OUT` connects to either the `PPIO` or `PPI1` of the EZ-KIT Lite.

[Table 2-1](#) summarizes the signals coming and going on the expansion interface connectors.

A-V EZ-Extender Hardware Reference

Figure 2-1. Block Diagram

Table 2-1. Signals of Expansion Interface Connectors

Net/Bus Name (Direction)	A-V EZ-Extender Function	Relevant Configuration Jumpers
PPIO_D[0:15] (Bi)	Connects the processor's PPIO data pins to the VID_IN_D[0:15] or the VID_OUT_D[0:15] buses, depending on the jumper settings. This allows PPIO to interface with all of the possible video interfaces on the board. This bus can be bidirectional; the direction can be fixed with a jumper or controlled by a flag pin.	JP5.3/4, JP9.2/4/6
PPIO_CLK (Output)	The clock related to the data on PPIO. This can come from an onboard oscillator, from one of the video interfaces, or from a socket that allows a user-supplied oscillator.	JP4.1/2, JP4.3/4, JP4.5/6, JP4.7/8
PPIO_SYNC1 (Bi)	The frame sync signal going to the processor's PPIO_SYNC1 pin. The signal behaves as the HSYNC or HREF for the video interfaces. The signal also can be used to drive the FPD1 HS signal. The signal can be bidirectional, where the direction is fixed with a jumper or is controlled by a flag pin.	JP6.1/3/5, JP8.1/3/5, JP8.7/8
PPIO_SYNC2 (Bi)	The frame sync signal going to the processor's PPIO_SYNC2 pin. The signal behaves as the VSYNC or VREF for the video interfaces. The signal also can be used to drive the FPD1 VS signal. This signal can be bidirectional; the direction can be fixed with a jumper or is controlled by a flag pin.	JP6.2/4/6, JP8.2/4/6, JP8.7/8
PPI1_D[0:15] (Bi)	Connects the processors PPI1 data pins to the VID_OUT_D[0:15] bus. The VID_OUT_D[0:15] bus interfaces with the output video interfaces (FPDI and the video encoder). The bus can be bidirectional but intended to be an input. Changing the direction is necessary only for test purposes and allows PPIO to loop-back to PPI1. D2, D3 and D10 of the bus have other functionality (follows).	JP5.3/4, JP5.5/6, JP3.9/10, JP3.3/5/7 JP3.4/6/8
PPI1_D10 (Bi)	Multifunction net that typically functions as the D10 pin of PPI1 but, with a jumper, also can connect to the PDWN input of the OmniVision and the Kodak camera interfaces.	JP3.9/10, JP5.3/4, JP5.5/6

Table 2-1. Signals of Expansion Interface Connectors (Cont'd)

Net/Bus Name (Direction)	A-V EZ-Extender Function	Relevant Configuration Jumpers
PPI1_D2 (Bi)	Multifunction net typically functions as the D2 pin of PPI1 but also can function as the data signal for the processor's two-wire interface (TWI). Used to program the internal configuration registers of most video interfaces.	JP3.3/5/7, JP5.3/4, JP5.5/6
PPI1_D3 (Bi)	Multifunction net typically functions as the D2 pin of PPI1 but also can function as the data signal for the processor's TWI. Used to program the internal configuration registers of most video interfaces.	JP3.4/6/8, JP5.3/4, JP5.5/6
FLAG_SDA (Bi)	In systems whose processor does not have a TWI, the signal connects to one of the processor's flag pins to emulate the data pin of the TWI and to configure the internal configure registers of most video interfaces.	JP3.3/5/7
FLAG_SCL_DIR_ CTRL (Input)	In systems whose processor does not have a TWI, the signal connects to one of the processor's flag pins to emulate the clock signal of the TWI and to configure the internal configure registers of most video interfaces.	JP3.4/6/8
PPI1_CLK (Output)	The clock driving the EZ-KIT Lite's PPI1 clock input. The source of this clock can be the PPI0_CLK, the onboard 27 MHz oscillator, or a socket accepting oscillators of other frequencies.	JP4.1/2, JP4.3/4, JP4.5/6, JP4.7/8
PPI1_FS1 (Input)	The signal driven to the HS signal of the FPD1. The output going to the FPD1 can be disabled by a jumper.	JP8.1/3/5, JP8.7/8
PPI1_FS2 (Input)	The signal driven to the VS signal of the FPD1. The output going to the FPD1 can be disabled by a jumper.	JP8.2/4/6, JP8.7/8
SNAPSHOT_FODD _SSEL (Bi)	Audio codec SPI slave select signal; also can connect to the SNAPSHOT input of the Kodak interface or the FODD output of the OmniVision interface.	JP3.21/22
SCK (Input)	The SPI serial clock used to program the control register of AD1836A audio codec.	
MOSI (Output)	The SPI serial output data signal used to program the control register of AD1836A audio codec.	

Table 2-1. Signals of Expansion Interface Connectors (Cont'd)

Net/Bus Name (Direction)	A-V EZ-Extender Function	Relevant Configuration Jumpers
MISO (Output)	The SPI serial input data signal used to read the control register of the AD1836A audio codec.	
RSCLK0 (Bi)	Processor's SPORT0 receive clock signal connected to the serial clock on the digital side of the audio codec analog input. In I ² S mode, the signal can connect to the TSCLK0 net.	JP7.1/2
RFS0 (Bi)	Processor's SPORT0 receive frame sync signal connected to the frame sync on the digital side of the audio codec analog input. In I ² S mode, the signal can connect to the TFS0 net.	JP7.1/2
DROPRI (Output)	Connection to the data output of the audio codec; can be disconnected with a jumper if the signal is needed for another purpose.	JP7.3/4
DROSEC (Output)	Secondary connection to the data output of the audio codec. Can be disconnected with a jumper if the signal is needed to be used for another purpose.	JP7.5/6
TSCLK0 (Bi)	Processor's SPORT0 transmit clock signal; connects to the serial clock on the digital side of the audio codec's analog output. In I ² S mode, the signal can connect to the RSCLK0 net.	JP7.1/2
TFS0 (Bi)	Processor's SPORT0 transmit frame sync signal. Connects to the frame sync on the digital side of the audio codec analog output. In I ² S mode, the signal can connect to the RFS0 net.	JP7.1/2
DTOPRI (Input)	Connection to the data input of the audio codec.	
DTOSEC (Input)	Secondary connection to the data input of the audio codec.	

Jumpers

Before using the Blackfin A-V EZ-Extender, follow the steps in [“A-V EZ-Extender Setup” on page 1-1](#).

[Figure 2-2](#) shows the locations of all of the jumper headers. The jumper headers are divided to show the placement and rotation of each jumper. The jumpers are described by the pins of the header on which the jumpers can be placed. For example, JP3.4/6/8 refers to a single jumper that can be placed across pins 4 and 6, or pins 6 and 8, of JP3. The dark pin indicates pin 1 of each header.

Video Test Loopback Jumpers (JP1.1/2, JP1.3/4, JP1.5/6)

For test purposes only, the video test jumpers loop-back the video encoder's output signals to the video decoder's input signals. By default, none of these jumpers is installed.

Connector Voltage Selection Jumper (JP2)

The camera module and LCD display interfaces can be powered via the extender. The actual voltage of these interfaces, 3.3V or 5V, is determined by the placement of the JP2 jumper (see [Table 2-2](#)).

TWI Source Selection Jumpers (JP3.3/5/7, JP3.4/6/8)

Due to the fact that some Blackfin processors feature a built-in two-wire interface (TWI), while others need to emulate the interface with programmable flags, two jumpers are provided to plug the A-V EZ-Extender to both sources (see [Table 2-3](#)).

Jumpers

Figure 2-2. Jumper Locations

Table 2-2. Jumper Locations and Connector Voltages

Jumper Location	Connector Voltage
JP2.1/2	3.3V
JP2.2/3	5V
Not installed	No power

Table 2-3. Jumper Locations and TWI Interface Sources

Jumper Pin Locations	TWI Interface Source
JP3.3/5 and JP3.4/6	Programmable flags
JP3.5/7 and JP3.6/8	Two-wire interface of the processor

PDWN Connection Jumper (JP3.9/10)

Depending on the application, the PDWN pin of the OmniVision and Kodak cameras can be left floating or can be controlled by a flag pin (see [Table 2-4](#)).

Table 2-4. PDWN Pin Connections

JP3.9/10	PDWN Connection
Uninstalled	PDWN is not used, and by default, the cameras function in standard mode.
Installed	The PDWN functionality of the cameras is controlled by a flag pin of the processor.

Decoder HSYNC Disconnect Jumper (JP3.11/12)

To connect the horizontal sync signal of the video decoder to the PPI0 frame sync signal of the processor, install the JP3.11/12 jumper; otherwise, the decoder's horizontal sync is disconnected.

Decoder VSYNC Connection Jumper (JP3.13/14)

To connect the vertical sync signal of the video decoder to the PPI0 frame sync signal of the processor, install the JP3.13/14 jumper; otherwise, the decoder's vertical sync is disconnected.

Encoder HREF Connection Jumper (JP3.15/16)

To connect the horizontal sync signal of the video encoder to the PPI0 frame sync signal of the processor, install the JP3.15/16 jumper; otherwise, the encoder's horizontal reference is disconnected.

Encoder VSYNC Connection Jumper (JP3.17/18)

To connect the vertical sync signal of the video encoder to the PPI0 frame sync signal of the processor, install the JP3.17/18 jumper; otherwise, the encoder's vertical sync is disconnected.

Decoder Output Enable Jumper (JP3.19/20)

When installed, the JP3.19/20 jumper enables the video decoder's data output signals on the VID_IN bus.

SNAPSHOT_FODD Disconnect Jumper (JP3.21/22)

The SNAPSHOT_FODD net of the A-V EZ-Extender is a general-purpose flag pin. The flag pin connects to both the SNAPSHOT signal of the Kodak camera evaluation board and the FODD control signal of the OmniVision camera evaluation board. Do not install the jumper unless the processor needs to control the signals. The flag pin also connects to the SPI select pin of the AD1836A audio codec—do not install this jumper when the audio interfaces is in use.

PPI Clock Setup Jumpers (JP4.1/2, JP4.3/4, JP4.5/6, JP4.7/8)

The PPI_CLK signals of the PPI0 and PPI1 are set up using the clock setup jumpers. [Table 2-5](#) shows the results of the jumper connections. For more information about the clock settings, refer to [Figure 2-1 on page 2-4](#).

Table 2-5. PPI Clock Setup Jumper Results

Jumper	Result
JP4.1/2	Connects EXT_VID_CLK to an onboard 27 MHz oscillator. For more information about the EXT_VID_CLK signal, see the description of JP4.3/4.
JP4.3/4	Connects PPIO_CLK to the EXT_VID_CLK net. The EXT_VID_CLK net is the external clock, which drives the input clock of all the camera module interface connectors, plus the flat panel display connector. Depending on the installation of the other JP4 jumpers, EXT_VID_CLK can be generated by the PIXEL_CLK net, the VDEC_CLKOUT net, a socket (U8), or the onboard 27 MHz oscillator.
JP4.5/6	Connects VDEC_CLKOUT to PPIO_CLK; VDEC_CLKOUT drives the PPIO clock when the video decoder is used.
JP4.7/8	Connects the PIXEL_CLK net, which is an output from the three camera module interfaces, to PPIO_CLK.

PPIO D8–15 Enable Jumper (JP5.1/2)

The JP5.1/2 jumper, when not installed, disables the upper 8-bits of the PPIO data bus. This allows the signals connected to the upper 8-bits of the PPI data bus on the EZ-KIT Lite to be used elsewhere.

To disable and reuse the upper 8-bits of the VID_IN and PPIO data busses, install the JP5.1/2 jumper.

VID_OUT Data Bus Control Jumpers (JP5.3/4, JP5.5/6)

The JP5.3/4 and JP5.5/6 jumpers are used together to set up the direction of, as well as to enable or disable, the drivers driving the VID_OUT data bus. [Table 2-6](#) shows the results of different combinations of the JP5.3/4 and JP5.5/6 jumpers.

Table 2-6. Video Out Data Bus Control Jumper Combinations

JP5.3/4	JP5.5/6	VID_OUT Status
Uninstalled	Uninstalled	VID_OUT, PPI1 are all not driven; PPI0 depends on the state of JP9.2/4/6
Uninstalled	Installed	PPI1 drives VID_OUT
Installed	Uninstalled	PPI0 drives VID_OUT
Installed	Installed	PPI0 drives VID_OUT, and VID_OUT drives PPI1 (loopback mode)

PPI0_SYNC1 Direction Setup Jumper (JP6.1/3/5)

The direction of the PPI0_SYNC1 signal can be either fixed or programmed, depending on the state of a general-purpose flag. [Table 2-7](#) shows how to set up the direction of PPI0_SYNC1.

Table 2-7. Setting Direction of PPI0_SYNC1 (JP6.1/3/5)

Jumper Location	PPI0_SYNC1 Direction
JP6.1/3	Controlled by flag pin
JP6.3/5	Input to processor
Uninstalled	Output from processor

PPI0_SYNC2 Direction Setup Jumper (JP6.2/4/6)

The direction of the PPI0_SYNC2 signal can be either fixed or programmed, depending on the state of a general-purpose flag. [Table 2-8](#) shows how to set the direction of PPI0_SYNC2.

Table 2-8. Setting Direction of PPI0_SYNC2 (JP6.2/4/6)

Jumper Location	PPI0_SYNC2 Direction
JP6.2/4	Controlled by flag pin
JP6.4/6	Input to processor
Uninstalled	Output from processor

I²S Enable Jumper (JP7.1/2)

When the JP7.1/2 jumper is installed, the SPORT signals are routed for I²S SPORT communication protocol mode. To accomplish this, the receive and transmit clocks of the processor are driven by the output clock of the AD1836A. The same is done for the frame sync signals.

SPORT Data Connection Jumpers (JP7.3/4, JP7.5/6)

The JP7.3/4 and JP7.5/6 jumpers connect data output pins (ASDATA1 and ASDATA2) of the audio codec to the primary and secondary SPORT data input pins of the processor. The audio codec is driving these pins—with the help of the JP7.3/4 and JP7.5/6 jumpers, the processor's pins can be reused when the audio codec is disabled.

VID_OUT Bus SYNC Source Select Jumpers (JP8.1/3/5, JP8.2/4/6)

The source of the PPI frame sync signals depends on the PPI port driving the VID_OUT bus. When using PPI0, place the jumpers at JP8.1/3 and JP8.2/4. When using PPI1, place the jumpers at JP8.3/5 and JP8.4/6.

VID_OUT Bus SYNC Enable Jumper (JP8.7/8)

To enable the VID_OUT frame sync signals, install the JP8.7/8 jumper.

AV_RESET Source Jumper (JP9.1/3/5)

The source of the ICs reset on the A-V EZ-Extender is controlled by either a flag pin or a system reset; the latter also resetting the Blackfin processor (see [Table 2-9](#)).

Table 2-9. Jumper Reset Sources

Jumper Location	Reset Source
JP9.1/3	Flag pin multiplexed with PPI1_D11
JP9.3/5	System reset generator
Uninstalled	ICs are not reset

PPI0_D Direction Setup Jumper (JP9.2/4/6)

The direction of the PPI0_D[15:0] signals can be a fixed direction or can be programmed, depending on the state of a general-purpose flag. [Table 2-10](#) shows how to set the direction of PPI0_D[15:0].

Table 2-10. Setting Direction of PPI0_D[15:0] (JP9.2/4/6)

Jumper Location	PPI0_D[15:0] Direction
JP9.2/4	Controlled by flag pin
JP9.4/6	Input to processor
Uninstalled	Output from processor

Audio Loopback Jumpers (JP10.1/2, JP10.3/4)

The JP10.1/2 and JP10.3/4 jumpers loop back the audio input to the output for test purposes and should not be installed.

A A-V EZ-EXTENDER BILL OF MATERIALS

The bill of materials corresponds to “[A-V EZ-Extender Schematic](#)” on [page B-1](#). Please check the latest schematic on the Analog Devices Web site:

A

AD1836A audio codecs, [1-2](#), [2-5](#), [2-6](#), [2-10](#), [2-13](#)
ADSP-BF533/37/61 processors
 flag pins, [2-5](#), [2-9](#), [2-14](#)
 parallel peripheral interfaces (PPI0-1), [1-2](#), [1-3](#), [1-6](#)
 PPI0-1 data pins, [2-4](#)
 PPI frame sync signals, [1-6](#), [2-9](#), [2-10](#)
 serial peripheral interface (SPI), [1-3](#)
 SPORT signals, [2-13](#)
ADV7179 video encoders
 connections, [1-3](#)
 HREF connection jumper, [2-10](#)
 VSYNC connection jumper, [2-10](#)
ADV7183B video decoders
 connections, [1-3](#)
 HSYNC disconnect jumper, [2-9](#)
 output enable jumper, [2-10](#)
 VSYNC connection jumper, [2-9](#)
analog
 audio interface, *See* audio interface
 video interface, *See* video interface
architecture, of this EZ-Extender, [2-2](#)
ASDATA1-2 (AD1836A output) pins, [2-13](#)
audio
 codecs, *See* AD1836A audio codecs
 interface, [-x](#), [1-2](#), [2-2](#)
 loopback jumpers, [2-14](#)
AV_RESET source jumper, [2-14](#)

B

backlight feature, [1-6](#)
bidirectional buffers, [2-2](#)
bill of materials, [A-1](#)
block diagram, of this EZ-Extender, [2-3](#)
board schematic, [B-1](#)

C

camera module interfaces, [1-4](#), [2-11](#)
connectors
 DB9, [1-6](#)
 J4 (OmniVision camera), [1-4](#)
 J6 (Micron camera), [1-4](#)
 P4 (Kodak camera), [1-5](#)
customer support, [-xiii](#)

D

data
 clock, [2-2](#)
 pins, *See* PPI0_Dx, PPI1_Dx
DB9 connector, [1-6](#)
DR0PRI net, [2-6](#)
DR0SEC net, [2-6](#)
DT0PRI net, [2-6](#)
DT0SEC net, [2-6](#)
Dx pins, [2-4](#), [2-5](#)

E

expansion interface, [1-2](#), [1-3](#), [2-2](#)
EXT_VID_CLK net, [2-11](#)

INDEX

EXT_VID_CLK pin, [2-11](#)

EZ-KIT Lites, parallel peripheral interfaces
(PPI0-1), [2-2](#), [2-5](#)

F

flag pins, ADSP-BF533/37/61 processors, [2-5](#),
[2-9](#), [2-14](#)

FLAG_SCL_DIR_CTRL net, [2-5](#)

FLAG_SDA net, [2-5](#)

flat panel display interface, *See* FPD

FODD (OmniVision control) signal, [2-10](#)

FPDI

connections, [-xi](#), [2-2](#)

overview, [1-6](#)

VS signal, [2-4](#), [2-5](#)

frame sync signals, [2-2](#), [2-13](#)

G

general-purpose flags, [2-10](#), [2-12](#), [2-14](#)

H

HREF

connection jumper, [2-10](#)

signal, [2-4](#)

HS signal, [2-4](#), [2-5](#)

HSYNC

disconnect jumper, [2-9](#)

signal, [2-4](#)

I

I2S mode, [1-2](#), [2-6](#), [2-13](#)

installation, of this EZ-Extender, [1-1](#)

interfaces

analog audio, [-x](#), [1-2](#)

analog video, [-x](#), [1-3](#)

camera modules, [-x](#), [1-4](#)

flat panel displays, [-xi](#), [1-6](#)

J

JP10.1/2 (audio loopback) jumper, [2-14](#)

JP10.3/4 (audio loopback) jumper, [2-14](#)

JP1.1/2 (video loopback) jumper, [2-7](#)

JP1.3/4 (video loopback) jumper, [2-7](#)

JP1.5/6 (video loopback) jumper, [2-7](#)

JP2 (voltage select) jumper, [2-7](#)

JP3.11/12 (ADV7183B HSYNC disconnect)
jumper, [2-9](#)

JP3.13/14 (ADV7183B VSYNC connect)
jumper, [2-9](#)

JP3.15/16 (ADV7179 HREF connect) jumper,
[2-10](#)

JP3.17/18 (ADV7179 VSYNC connect)
jumper, [2-10](#)

JP3.19/20 (ADV7183B enable) jumper, [2-10](#)

JP3.21/22 (SNAPSHOT_FODD) jumper, [2-5](#),
[2-10](#)

JP3.3/5/7 (TWI source) jumper, [2-4](#), [2-5](#), [2-7](#)

JP3.4/6/8 (TWI source) jumper, [2-4](#), [2-5](#), [2-7](#)

JP3.9/10 (PDWN connect) jumper, [2-4](#), [2-9](#)

JP4.1/2 (PPI clock) jumper, [2-4](#), [2-5](#), [2-10](#)

JP4.3/4 (PPI clock) jumper, [2-4](#), [2-5](#), [2-10](#)

JP4.5/6 (PPI clock) jumper, [2-4](#), [2-5](#), [2-10](#)

JP4.7/8 (PPI clock) jumper, [2-4](#), [2-5](#), [2-10](#)

JP5.1/2 (PPI0 data enable) jumper, [2-11](#)

JP5.3/4 (video out control) jumper, [2-4](#), [2-5](#),
[2-11](#)

JP5.5/6 (video out control) jumper, [2-4](#), [2-5](#),
[2-11](#)

JP6.1/3/5 (PPI0_SYNC1 direct) jumper, [2-4](#),
[2-12](#)

JP6.2/4/6 (PPI0_SYNC2 direct) jumper, [2-4](#),
[2-12](#)

JP7.1/2 (I2S enable) jumper, [1-3](#), [2-6](#), [2-13](#)

JP7.3/4 (SPORT connect) jumper, [2-6](#), [2-13](#)

JP7.5/6 (SPORT connect) jumper, [2-6](#), [2-13](#)

JP8.1/3/5 (video out SYNC select) jumper, [2-4](#),
[2-5](#), [2-13](#)

JP8.2/4/6 (video out SYNC select) jumper, [2-4](#), [2-5](#), [2-13](#)

JP8.7/8 (video out SYNC enable) jumper, [2-4](#), [2-5](#), [2-13](#)

JP9.1/3/5 (reset) jumper, [2-14](#)

JP9.2/4/6 (PPI0 direction) jumper, [2-4](#), [2-14](#)
