

## VHLPX800-11-6WH

**800 mm | 2.6 ft ValuLine® High Performance Low Profile Antenna, dual-polarized, 10.700–11.700 GHz, CPR90G, white antenna, polymer white radome without flash, standard pack—one-piece reflector**

### General Specifications

Antenna Type	VHLPX - ValuLine® High Performance Low Profile Antenna, dual-polarized
Diameter, nominal	800 mm   2.6 ft
Packing	Standard pack
Radome Color	White
Radome Material	Polymer
Reflector Construction	One-piece reflector
Antenna Input	CPR90G
Antenna Color	White
Antenna Type	VHLPX - ValuLine® High Performance Low Profile Antenna, dual-polarized
Diameter, nominal	800 mm   2.6 ft
Flash Included	No
Polarization	Dual

### Electrical Specifications

Operating Frequency Band	10.700 – 11.700 GHz
Beamwidth, Horizontal	2.2 °
Beamwidth, Vertical	2.2 °
Cross Polarization Discrimination (XPD)	30 dB
Electrical Compliance	Brazil Anatel Class 2   ETSI 302 217 Class 2   US FCC Part 101A
Front-to-Back Ratio	59 dB
Gain, Low Band	36.9 dBi
Gain, Mid Band	37.4 dBi
Gain, Top Band	38.3 dBi
Operating Frequency Band	10.700 – 11.700 GHz
Radiation Pattern Envelope Reference (RPE)	7103C
Return Loss	17.7 dB
VSWR	1.30

### Mechanical Specifications

Fine Azimuth Adjustment	±10°
Fine Elevation Adjustment	±25°
Mounting Pipe Diameter	50 mm–115 mm   2.0 in–4.5 in
Net Weight	22 kg   49 lb
Side Struts, Included	0
Side Struts, Optional	0
Wind Velocity Operational	200 km/h   124 mph

# Product Specifications

COMMSCOPE®

VHLPX800-11-6WH

POWERED BY

Wind Velocity Survival Rating 250 km/h | 155 mph

## Wind Forces At Wind Velocity Survival Rating

Axial Force (FA)	1500 N   337 lbf
Side Force (FS)	743 N   167 lbf
Twisting Moment (MT)	673 N•m
Weight with 1/2 in (12 mm) Radial Ice	35 kg   77 lb
Zcg with 1/2 in (12 mm) Radial Ice	305 mm   12 in
Zcg without Ice	175 mm   7 in

## Antenna Dimensions And Mounting Information

Dimensions in Inches (mm)				
Antenna Size, ft (m)	A	B	C	D
2.5	33.6 (853.9)	16.5 (418.0)	19.0 (483.3)	5.9 (150)

## Regulatory Compliance/Certifications

Agency  
ISO 9001:2008

Classification

Designed, manufactured and/or distributed under this quality management system

## \* Footnotes

Axial Force (FA)

Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.

# Product Specifications

COMMSCOPE®

VHLPX800-116WH

POWERED BY

Cross Polarization Discrimination (XPD)	The difference between the peak of the co-polarized main beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.
Front-to-Back Ratio	Denotes highest radiation relative to the main beam, at $180^\circ \pm 40^\circ$ , across the band. Production antennas do not exceed rated values by more than 2 dB unless stated otherwise.
Gain, Mid Band	For a given frequency band, gain is primarily a function of antenna size. The gain of Andrew antennas is determined by either gain by comparison or by computer integration of the measured antenna patterns.
Operating Frequency Band	Bands correspond with CCIR recommendations or common allocations used throughout the world. Other ranges can be accommodated on special order.
Packing	Andrew standard packing is suitable for export. Antennas are shipped as standard in totally recyclable cardboard or wire-bound crates (dependent on product). For your convenience, Andrew offers heavy duty export packing options.
Radiation Pattern Envelope Reference (RPE)	Radiation patterns determine an antenna's ability to discriminate against unwanted signals under conditions of radio congestion. Radiation patterns are dependent on antenna series, size, and frequency.
Return Loss	The figure that indicates the proportion of radio waves incident upon the antenna that are rejected as a ratio of those that are accepted.
Side Force (FS)	Maximum side force exerted on the mounting pipe as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.
Twisting Moment (MT)	Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.
VSWR	Maximum; is the guaranteed Peak Voltage-Standing-Wave-Ratio within the operating band.
Wind Velocity Operational	The wind speed where the antenna deflection is equal to or less than 0.1 degrees. In the case of ValuLine antennas, it is defined as a maximum deflection of $0.3 \times$ the 3 dB beam width of the antenna.
Wind Velocity Survival Rating	The maximum wind speed the antenna, including mounts and radomes, where applicable, will withstand without permanent deformation. Realignment may be required. This wind speed is applicable to antenna with the specified amount of radial ice.
