NTE869
Integrated Circuit
Dual, High Speed, Programmable
Current Mode (Norton) Amp

Description:

The NTE869 consists of two current differencing (Norton) input amplifiers. Emphasis has been placed on obtaining high frequency performance and providing user programmable amplifier operating characteristics. Each amplifier is broadbanded to provide a high gain bandwidth product, fast slew rate and stable operation for an Inverting closed loop gain of 10 or greater. Pins for additional external frequency compensation are provided. The amplifiers are designed to operate from a single supply and can accommodate input common–mode voltages greater than the supply.

Applications:

- General Purpose Video Amplifiers
- High Frequency, High Q Active Filters
- Photo–Diode Amplifiers
- Wide Frequency Range Waveform Generation Circuits
- AC Applications Work to much Higher Frequencies

Features:

- User programmable gain bandwidth product, slew rate, input bias current, output stage biasing current and total device power dissipation.
- High gain bandwidth product (I_{SET} = 0.5mA)
      400MH_Z for A_V = 10 to 100
      30MH_Z for A_V = 1
- Current differencing inputs allow high common–mode input voltages
- Operates from a single 5V to 22V supply
- Large inverting amplifier output swing, 2mV to V_{CC} –2V
- Low spot noise, 6nV/√Hz, for f > 1kH_Z

Absolute Maximum Ratings:

Supply Voltage 22V
Supply Voltage . . . . ±11V
Power Dissipation, P_D 750mW
Input Currents, $I_{IN}(+)$ or $I_{IN}(-)$ 10mA
Set Currents, $I_{SET(IN)}$ or $I_{SET(OUT)}$ 2mA
Maximum Junction Temperature, T_J . . . . +125°C
Operating Temperature Range, T_{opr} . . . . 0° to 70°C
Thermal Resistance, Junction–to–Ambient, R_{thJA} . . . . 160°C/W
Lead Temperature (During Soldering, 10sec), T_L . . . . +300°C

Electrical Characteristics: ($I_{SET(IN)}$ = $I_{SET(OUT)}$ = 0.5mA, V_{supply} = 12V, T_A = +25°C unless otherwise noted.)

Parameter	Test Conditions	Min	Typ	Max	Unit
Open Loop Voltage Gain	V_{supply} = 12V, R_L = 1k, f = 100Hz T_A = 125°C	62 –	72 68	– –	dB
Bandwidth Unity Gain	R_{IN} = 1kΩ, C_{comp} = 10pF	15	30	–	MH$_Z$
Gain Bandwidth Product Gain of 10 to 100	R_{IN} 50Ω to 200Ω	200	400	–	MH$_Z$
