

DIFFERENTIAL TRANSLATOR/REPEATER

FEATURES

- **Designed for Signaling Rates** ⁽¹⁾ ≥ 2 Gbps
- **Total Jitter** < 65 ps
- **Low-Power Alternative for the MC100EP16**
- **Low 100 ps (Max) Part-To-Part Skew**
- **25 mV of Receiver Input Threshold Hysteresis Over 0-V to 4-V Common-Mode Range**
- **Inputs Electrically Compatible With LVPECL, CML, and LVDS Signal Levels**
- **3.3-V Supply Operation**
- **LVDT Integrates 110- Ω Terminating Resistor**
- **Offered in SOIC and MSOP**

APPLICATIONS

- **622 MHz Central Office Clock Distribution**
- **High-Speed Network Routing**
- **Wireless Basestations**
- **Low Jitter Clock Repeater**
- **Serdes LVPECL Output to FPGA LVDS Input Translator**

- (1) The signaling rate of a line is the number of voltage transitions that are made per second expressed in the units bps (bits per second).

DESCRIPTION

The SN65LVDS100, SN65LVDT100, SN65LVDS101, and SN65LVDT101 are a high-speed differential receiver and driver connected as a repeater. The receiver accepts low-voltage differential signaling (LVDS), positive-emitter-coupled logic (PECL), or current-mode logic (CML) input signals at rates up to 2 Gbps and repeats it as either an LVDS or PECL output signal. The signal path through the device is differential for low radiated emissions and minimal added jitter.

The outputs of the SN65LVDS100 and SN65LVDT100 are LVDS levels as defined by TIA/EIA-644-A. The outputs of the SN65LVDS101 and SN65LVDT101 are compatible with 3.3-V PECL levels. Both drive differential transmission lines with nominally 100- Ω characteristic impedance.

The SN65LVDT100 and SN65LVDT101 include a 110- Ω differential line termination resistor for less board space, fewer components, and the shortest stub length possible. They do not include the V_{BB} voltage reference found in the SN65LVDS100 and SN65LVDS101. V_{BB} provides a voltage reference of typically 1.35 V below V_{CC} for use in receiving single-ended input signals and is particularly useful with single-ended 3.3-V PECL inputs. When not used, V_{BB} should be unconnected or open.

All devices are characterized for operation from -40°C to 85°C .

FUNCTIONAL DIAGRAM

EYE PATTERN

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

ORDERING INFORMATION

OUTPUT	TERMINATION RESISTOR	V _{BB}	PART NUMBER ⁽¹⁾	PART MARKING	PACKAGE
LVDS	No	Yes	SN65LVDS100D	DL100	SOIC

(1) Add the suffix R for taped and reeled carrier (i.e. SN65LVDS100DR).

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

over operating free-air temperature range unless otherwise noted

			UNIT
V _{CC}	Supply voltage range ⁽²⁾		−0.5 V to 4 V
I _{BB}	V _{BB} Output current		±0.5 mA
V _I	Voltage range, (A, B, Y, Z)		0 V to 4.3 V
V _O			
V _{ID}	Differential voltage, V _A − V _B ('LVDT100 and 'LVDT101 only)		1 V
ESD	Human Body Model ⁽³⁾	A, B, Y, Z, and GND	±5 kV
		All pins	±2 kV
	Charged-Device Model ⁽⁴⁾	All pins	±1500 V
P _D	Continuous power dissipation		See Dissipation Rating Table

(1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) All voltage values, except differential I/O bus voltages, are with respect to network ground terminal.

(3) Tested in accordance with JEDEC Standard 22, Test Method A114-A.7.

(4) Tested in accordance with JEDEC Standard 22, Test Method C101.

POWER DISSIPATION RATINGS

PACKAGE	T _A ≤ 25°C POWER RATING	DERATING FACTOR ⁽¹⁾ ABOVE T _A = 25°C	T _A = 85°C POWER RATING
DGK	377 mW	3.8 mW/°C	151 mW
D	481 mW	4.8 mW/°C	192 mW

(1) This is the inverse of the junction-to-ambient thermal resistance with no air flow installed on the JESD51-3 low effective thermal conductivity test board for leadless surface mount packages.

RECOMMENDED OPERATING CONDITIONS

		MIN	NOM	MAX	UNIT
Supply voltage, V_{CC}		3	3.3	3.6	V
Magnitude of differential input voltage $ V_{ID} $	'LVDS100 or 'LVDS101	0.1		1	V
	'LVDT100 or 'LVDT101	0.1		0.8	
Input voltage (any combination of common-mode or input signals), V_I		0		4	V
V_{BB} output current, $I_{O(VBB)}$		–400 ⁽¹⁾		12	μ A
Operating free-air temperature, T_A		–40		85	°C

(1) The algebraic convention, in which the less positive (more negative) limit is designated minimum, is used in this data sheet.

PARAMETER			TEST CONDITIONS		MIN	TYP ⁽¹⁾	MAX	UNIT
t_{PLH}	Propagation delay time, low-to-high-level output	'LVDx100	See Figure 5		300	470	800	ps
		'LVDx101			400	630	900	
t_{PHL}	Propagation delay time, high-to-low-level output	'LVDx100			300	470	800	ps
		'LVDx100			400	630	900	
t_r	Differential output signal rise time (20%–80%)						220	ps
t_f	Differential output signal fall time (20%–80%)						220	ps
$t_{sk(p)}$	Pulse skew ($ t_{PHL} - t_{PLH} $) ⁽²⁾					5	50	ps
$t_{sk(pp)}$	Part-to-part skew ⁽³⁾				$V_{ID} = 0.2 \text{ V}$, See Figure 5		100	ps
$t_{jit(per)}$	RMS period jitter ⁽⁴⁾		1 GHz 50% duty cycle square wave input, $V_{ID} = 200 \text{ mV}$, $V_{IC} = 1.2 \text{ V}$, See Figure 6			1	3.7	ps
$t_{jit(cc)}$	Peak cycle-to-cycle jitter ⁽⁵⁾					6	23	ps
$t_{jit(pp)}$	Peak-to-peak jitter		2 GHz PRBS, $2^{23} - 1$ run length, $V_{ID} = 200 \text{ mV}$, $V_{IC} = 1.2 \text{ V}$, See Figure 6			28	65	ps
$t_{jit(det)}$	Peak-to-peak deterministic jitter ⁽⁶⁾		2 GHz PRBS, $2^7 - 1$ run length, $V_{ID} = 200 \text{ mV}$, $V_{IC} = 1.2 \text{ V}$, See Figure 6			17	48	ps

(1) All typical values are at 25°C and with a 3.3 V supply.

(2) $t_{sk(p)}$ is the magnitude of the time difference between the t_{PLH} and t_{PHL} of any output of a single device.

(3) $t_{sk(pp)}$ is the magnitude of the time difference in propagation delay time between any specified terminals of two devices when both devices operate with the same supply voltages, at the same temperature, and have identical packages and test circuits.

(4) Period jitter is the deviation in cycle time of a signal with respect to the ideal period over a random sample of 1000,000 cycles.

(5) Cycle-to-cycle jitter is the variation in cycle time of a signal between adjacent cycles, over a random sample of 1,000 adjacent cycle pairs.

(6) Deterministic jitter is the sum of pattern-dependent jitter and pulse-width distortion.

APPLICATION INFORMATION

The SN65LVDS100, SN65LVDT100, SN65LVDS101, and SN65LVDT101 inputs will detect a 100-mV difference between any two signals between 0 V and 4 V. This range will allow receipt of many different single-ended and differential signals. Following are some of the more common connections.

APPLICATION INFORMATION (continued)

FAILSAFE CONSIDERATIONS

Failsafe, in regard to a line receiver, usually means that the output goes to a defined logical state with no input signal. To keep added jitter to an absolute minimum, the SN65LVDS100 does not include this feature. It does exhibit 25 mV of input voltage hysteresis to prevent oscillation and keep the output in the last state prior to input-signal loss (assuming the differential noise in the system is less than the hysteresis).

Should failsafe be required, it may be added externally with a 1.6-k Ω pull-up resistor to the 3.3-V supply and a 1.6-k Ω pull-down resistor to ground as shown in Figure 45. The default output state is determined by which line is pulled up or down and is the user's choice. The location of the 1.6-k Ω resistors is not critical. However the 100- Ω resistor should be located at the end of the transmission line.

Figure 45. External Failsafe Circuit

Addition of this external failsafe will reduce the differential noise margin and add jitter to the output signal. The roughly 100-mV steady-state voltage generated across the 100- Ω resistor adds (or subtracts) from the signal generated by the upstream line driver. If the line driver's differential output is symmetrical about zero volts, then the input at the receiver will appear asymmetrical with the external failsafe. Perhaps more important, is the extra time it takes for the input signal to overcome the added failsafe offset voltage.

In Figure 46 and using an external failsafe, the high-level differential voltage at the input of the SN65LVDS100 reaches 340 mV and the low-level -400 mV indicating a 60-mV differential offset induced by the external failsafe circuitry. The figure also reveals that the lowest peak-to-peak time jitter does not occur at zero-volt differential (the nominal input threshold of the receiver) but at -60 mV, the failsafe offset.

The added jitter from external failsafe increases as the signal transition times are slowed by cable effects. When a ten-meter CAT-5 UTP cable is introduced between the driver and receiver, the zero-crossing peak-to-peak jitter at the receiver output adds 250 ps when the external failsafe is added with this specific test set up. If external failsafe is used in conjunction with the SN65LVDS100, the noise margin and jitter effects should be budgeted.

Figure 46. Receiver Input Eye Pattern With External Failsafe

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DGK (S-PDSO-G8)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 per end.
 - D. Body width does not include interlead flash. Interlead flash shall not exceed 0.50 per side.
 - E. Falls within JEDEC MO-187 variation AA, except interlead flash.

D GK (S-PDSO-G8)

PLASTIC SMALL OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

D (R-PDSO-G8)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - $\triangle C$ Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
 - $\triangle D$ Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
 - E. Reference JEDEC MS-012 variation AA.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
