

POWER RESISTOR - PR01

FEATURES

- Metal film technology
- High power in small package
- High stability, reliability and uniformity characteristics
- Good performance for pulse applications
- Different leads for different applications
- Various forming styles are available
- Defined interruption behavior (fusing time)
- Non-flammable
- Various packing and taping configurations

TECHNOLOGY

A homogeneous film of metal alloy is deposited on a high-grade ceramic body. After a helical groove has been cut in the resistive layer, tinned connecting wires of electrolytic copper or copper-clad iron are welded to the end-caps. The resistors are coated with a red, non-flammable lacquer, which provides electrical, mechanical and climatic protection. The encapsulation is resistant to all cleaning solvents in accordance with MIL-STD-202, method 215 and IEC 60068-2-45.

QUICK REFERENCE DATA

DESCRIPTION	PR01 $\pm 5\%$ (E24 series)	PR01 $\pm 1\%$ (E24/E96 series)
	Cu / FeCu lead	
Resistance range	0.22 Ω - 1 M Ω	1 Ω - 1 M Ω
Maximum dissipation at T _{amb} = 70 °C	1 W	
Thermal resistance (R _{th})	135 K/W	
Limiting voltage (DC or RMS)	350 V	
Rated voltage ⁽¹⁾	$\sqrt{P_n \times R}$	
Temperature coefficient	± 250 ppm/°C	
Basic specification	IEC 60115-1 and 60115-4	
Climatic category (IEC 60068)	55/155/56	
Stability $\Delta R/R_{max}$ after:		
Load	$\pm 5\% + 0.1 \Omega$	$\pm 1\% + 0.1 \Omega$
Climatic tests	$\pm 3\% + 0.1 \Omega$	$\pm 1\% + 0.1 \Omega$
Resistance to soldering heat	$\pm 1\% + 0.05 \Omega$	$\pm 0.5\% + 0.05 \Omega$

(1) Maximum rated voltage is the limiting voltage

MOUNTING

The resistors are suitable for processing on automatic insertion equipment, cutting and bending machines. A radial taped version economizes space on the PCB. The double kink style offers great advantages for manual insertion improving the mounting stability for the customer. They have a real snap in function to fix the resistor in PCB without weakening the connecting leads.

ELECTRICAL CHARACTERISTICS

DERATING

The power that the resistor can dissipate depends on the operating temperature.

INTERRUPTION CHARACTERISTICS

The graphs are based on measured data under constant voltage conditions; these data may deviate according to the application.

MARKING

The nominal resistance and tolerance are marked on the resistor using four or five colored bands in accordance with IEC publication 60062 "color code for fixed resistors". Standard values of nominal resistance are taken from the E24/E96 series for resistors with a tolerance of $\pm 5\%$ or $\pm 1\%$. The values of the E24/E96 series are in accordance with IEC publication 60063.

ORDERING INFORMATION

Dimensions unless specified in mm (inches)

Check "**Formed leads**" specifications to see related part-numbers

The resistors have a 12 digit ordering code starting with 2306 or 2322.

The next 5 digits indicate the resistor type and packaging see table 2.

For 5% tolerance the last 3 digits indicate the resistance value:

- The first 2 digits indicate the resistance value;
- The last digit indicates the resistance decade in accordance with table 3.

For 1% tolerance the last 4 digits indicate the resistance value:

- The first 3 digits indicate the resistance value;
- The last digit indicates the resistance decade in accordance with table 3.

Table 3. Last digit of ordering code.

RESISTANCE DECADE (5%)	RESISTANCE DECADE (1%)	LAST DIGIT
0.22 - 0.91 Ω	-	7
1 - 9.1 Ω	1 - 9.76 Ω	8
10 - 91 Ω	10 - 97.6 Ω	9

TESTS AND REQUIREMENTS

Essentially all tests are carried out in accordance to the schedule of IEC publications 60115 – 1, category 55/155/56 (rated temperature range - 55 to +155 °C; damp heat, long term, 56 days and along the lines of IEC publications 60068-2); “Recommended basic climatic and mechanical robustness testing procedure for electronic components” and under standard atmosphere conditions according to IEC 60068-1 subclause 5.3, unless otherwise specified.

In some instances deviations from IEC applications were necessary for our method specified.
