

Programmable Maximum Duty Cycle PWM Controller

FEATURES

- User Programmable Maximum PWM Duty Cycle
- 100 μ A Startup Current
- Operation to 1MHz
- Internal Full Cycle Soft Start
- Internal Leading Edge Blanking of Current Sense Signal
- 1A Totem Pole Output

DESCRIPTION

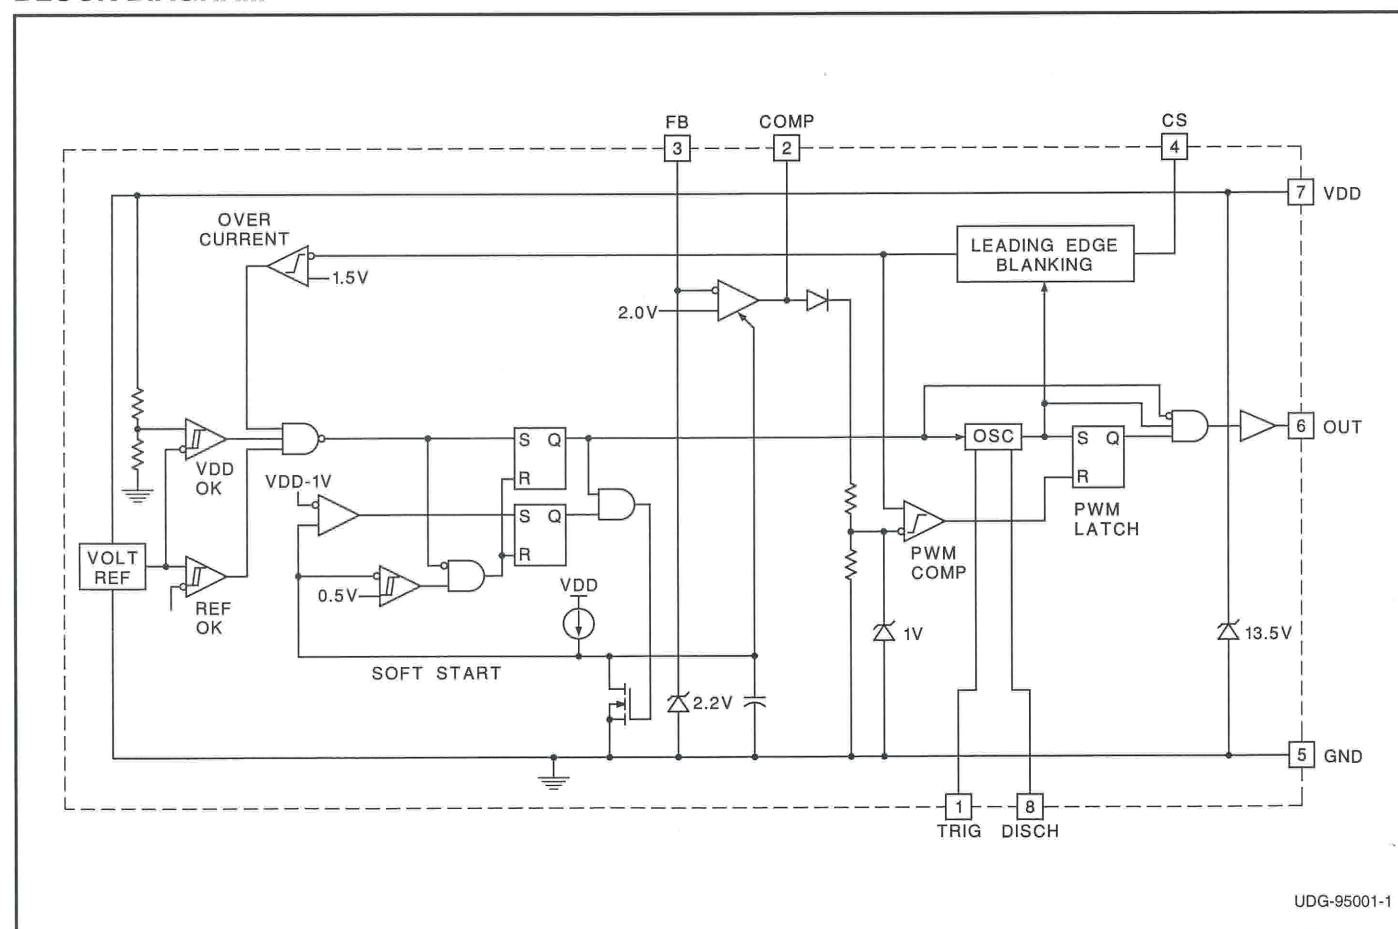

The UCC3807 family of high speed, low power integrated circuits contains all of the control and drive circuitry required for off-line and DC-to-DC fixed frequency current mode switching power supplies with minimal external parts count.

These devices are similar to the UCC3800 family, but with the added feature of a user programmable maximum duty cycle. Oscillator frequency and maximum duty cycle are programmed with two resistors and a capacitor. The UCC3807 family also features internal full cycle soft start and internal leading edge blanking of the current sense input.

The UCC3807 family offers a variety of package options, temperature range options, and choice of critical voltage levels. The family has UVLO thresholds and hysteresis levels for off-line and battery powered systems. Thresholds are shown in the table below.

| Part Number | Turn-on Threshold | Turn-off Threshold | Packages |
|-------------|-------------------|--------------------|----------|
| UCCx807-1 | 7.2V | 6.9V | J |
| UCCx807-2 | 12.5V | 8.3V | N, D |
| UCCx807-3 | 4.3V | 4.1V | N, D, PW |

BLOCK DIAGRAM

ABSOLUTE MAXIMUM RATINGS

| | |
|---|--|
| Supply Voltage ($I_{DD} \leq 10\text{mA}$) | 13.5V |
| Supply Current | 30mA |
| OUT Current | $\pm 1\text{A}$ |
| Analog Inputs (FB, CS) | -0.3V to $(\text{VDD} + 0.3\text{V})$ |
| Power Dissipation at $T_A + 25^\circ\text{C}$ (N or J packages) | 1W |
| Power Dissipation at $T_A + 25^\circ\text{C}$ (D package) | 0.65W |
| Storage Temperature | -65°C to $+150^\circ\text{C}$ |
| Junction Temperature | -65°C to $+150^\circ\text{C}$ |
| Lead Temperature (Soldering, 10 sec.) | $+300^\circ\text{C}$ |

All currents are positive into, negative out of the specified terminal. Consult Packaging Section of Databook for thermal limitations and considerations of packages.

ORDERING INFORMATION

CONNECTION DIAGRAMS

DIL-8, SOIC-8, TSSOP-8 (Top View)
J, N, D or PW Packages

ELECTRICAL CHARACTERISTICS: Unless otherwise stated these specifications apply for $T_A = -55^\circ\text{C}$ to $+125^\circ\text{C}$ for UCC1807-1/-2/-3; -40°C to $+85^\circ\text{C}$ for UCC2807-1/-2/-3; and 0°C to $+70^\circ\text{C}$ for UCC3807-1/-2/-3; $\text{VDD} = 10\text{V}$ (Note 6), $R_A = 12\text{k}\Omega$, $R_B = 4.7\text{k}\Omega$, $C_T = 330\text{pF}$, $1.0\mu\text{F}$ capacitor from VDD to GND , $T_A = T_J$.

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNITS |
|--------------------------------|------------------------|------|--------|------|---------------|
| Oscillator Section | | | | | |
| Frequency | | 175 | 202 | 228 | kHz |
| Temperature Stability | (Note 5) | | 2.5 | | % |
| Amplitude | (Note 1) | | 1/3VDD | | V |

| COMP to CS Offset | CS = 0V | 0.55 | 1.1 | 1.65 | V |
| Output Section | | | | | |
| OUT Low Level | I = 100mA | | 0.4 | 1 | V |
| OUT High Level | I = -100mA, VDD - OUT | | 0.4 | 1 | V |
| Rise/Fall Time | CL = 1nF (Note 5) | | 20 | 100 | ns |

ELECTRICAL CHARACTERISTICS: Unless otherwise stated these specifications apply for $T_A = -55^\circ\text{C}$ to $+125^\circ\text{C}$ for UCC1807-1/-2/-3; -40°C to $+85^\circ\text{C}$ for UCC2807-1/-2/-3; and 0°C to $+70^\circ\text{C}$ for UCC3807-1/-2/-3; $V_{DD} = 10\text{V}$ (Note 6), $R_A = 12\text{k}\Omega$, $R_B = 4.7\text{k}\Omega$, $C_T = 330\text{pF}$, $1.0\mu\text{F}$ capacitor from V_{DD} to GND , $T_A = T_J$.

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNITS |
|---------------------------------------|--|------|------|------|-------|
| Undervoltage Lockout Section | | | | | |
| Start Threshold | UCCx807-1 (Note 4) | 6.6 | 7.2 | 7.8 | V |
| | UCCx807-2 | 11.5 | 12.5 | 13.5 | V |
| | UCCx807-3 | 4.1 | 4.3 | 4.5 | V |
| Minimum Operating Voltage After Start | UCCx807-1 (Note 4) | 6.3 | 6.9 | 7.5 | V |
| | UCCx807-2 | 7.6 | 8.3 | 9.0 | V |
| | UCCx807-3 | 3.9 | 4.1 | 4.3 | V |
| Hysteresis | UCCx807-1 | 0.1 | 0.3 | 0.5 | V |
| | UCCx807-2 | 3.5 | 4.2 | 5.1 | V |
| | UCCx807-3 | 0.1 | 0.2 | 0.3 | V |
| Soft Start Section | | | | | |
| COMP Rise Time | FB = 1.8V, From 0.5V to 4.0V | | 4 | | ms |
| Overall Section | | | | | |
| Startup Current | $V_{DD} < \text{Start Threshold (UCCx807-1,-3)}$ | | 0.1 | 0.2 | mA |
| | $V_{DD} < \text{Start Threshold (UCCx807-2)}$ | | 0.15 | 0.25 | mA |
| Operating Supply Current | FB = 0V, CS = 0V, No Load (Note 7) | | 1.3 | 2.1 | mA |
| VDD Zener Shunt Voltage | $I_{DD} = 10\text{mA}$ | 12.0 | 13.5 | 15.0 | V |
| Shunt to Start Difference | | 0.5 | 1.0 | | V |

Note 1: Measured at TRIG; signal minimum = $1/3 V_{DD}$, maximum = $2/3 V_{DD}$.

Note 2: Gain is defined by: $A = \frac{\Delta V_{COMP}}{\Delta V_{CS}}$, $0 \leq V_{CS} \leq 0.8\text{V}$

Note 3: Parameter measured at trip point of latch with FB at 0V.

Note 4: Start Threshold and Zener Shunt thresholds track one another.

Note 5: Ensured by design. Not 100% tested in production.

Note 6: Adjust VDD above the start threshold before setting at 10V for UCC3807-2.

Note 7: Does not include current in external timing RC network.

PIN DESCRIPTIONS

COMP: COMP is the output of the error amplifier and the input of the PWM comparator. The error amplifier in the UCC3807 is a low output impedance, 2MHz operational amplifier. COMP can both source and sink current. The error amplifier is internally current limited, which allows zero duty cycle by externally forcing COMP to GND.

The UCC3807 family features built-in full cycle soft start. Soft start is implemented as a clamp on the maximum COMP voltage.

CS: Current sense input. There are two current sense comparators on the chip, the PWM comparator and an overcurrent comparator.

The UCC3807 also contains a leading edge blanking circuit, which disconnects the external CS signal from the current sense comparator during the 100ns interval immediately following the rising edge of the signal at the OUT pin. In most applications, no analog filtering is required on CS. Compared to an external RC filtering technique, leading edge blanking provides a smaller effective CS to OUT propagation delay. Note, however, that the minimum non-zero on-time of the OUT signal is directly

affected by the leading edge blanking and the CS to OUT propagation delay.

The overcurrent comparator is only intended for fault sensing. Exceeding the overcurrent threshold causes a soft start cycle.

FB: The inverting input to the error amplifier. For best stability, keep connections to FB as short as possible and stray capacitance as small as possible.

GND: Reference ground and power ground for all functions of the part.

OUT: The output of a high current power driver capable of driving the gate of a power MOSFET with peak currents exceeding 1A. OUT is actively held low when VDD is below the UVLO threshold.

The high current power driver consists of MOSFET output devices in a totem pole configuration. This allows the output to switch from VDD to GND. The output stage also provides a very low impedance which minimizes overshoot and undershoot. In most cases, external Schottky clamp diodes are not required.

PIN DESCRIPTIONS (cont.)

TRIG/DISCH: Oscillator control pins. Trig is the oscillator timing input, which has an RC-type charge/discharge signal controlling the chip's internal oscillator. DISCH is the pin which provides the low impedance discharge path for the external RC network during normal operation. Oscillator frequency and maximum duty cycle are computed as follows:

$$\text{frequency} \approx \frac{1.4}{(R_A + 2R_B) C_T}$$

$$\text{duty cycle} \approx \frac{R_A + R_B}{R_A + 2R_B}$$

as shown in Figure 1.

For best performance, keep the lead from C_T to GND as short as possible. A separate ground connection for C_T is desirable. The minimum value of R_A is 10k Ω , the minimum value of R_B is 2.2k Ω , and the minimum value of C_T is 47pF.

VDD: The power input connection for this device. Total VDD current is the sum of quiescent current and the average OUT current. Knowing the operating frequency and the MOSFET gate charge (Qg), average OUT current can be calculated from

$$I_{OUT} = Q_g \cdot F, \text{ where } F \text{ is frequency.}$$

To prevent noise problems, bypass VDD to GND with a ceramic capacitor as close to the chip as possible in parallel with an electrolytic capacitor.

Figure 1. Oscillator Block Diagram

APPLICATIONS INFORMATION

The circuit shown in Fig. 2 illustrates the use of the UCC3807 in a typical off-line application. The 100W, 200kHz, universal input forward converter produces a regulated 12VDC at 8 Amps. The programmable maximum duty cycle of the UCC3807 allows operation down to 80VRMS and up to 265VRMS with a simple RCD clamp to limit the MOSFET voltage and provide core reset. In this application the maximum duty cycle is set to about 65%. Another feature of the design is the use of a flyback winding on the output filter choke for both bootstrapping and voltage regulation. This method of loop closure eliminates the optocoupler and secondary side regulator, common to most off-line designs, while providing good line and load regulation.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
 - Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
