DC OK Relay Contact

Outputs are used for preventive function monitoring of the power supply. An electrically isolated signal contact is available.

The signal contact closes when the output power is OK and opens when the output voltage falls below 20Vdc $\pm$ 5%.

Output Derating Curve

Parallel Connection

A parallel connection with the same model power supply can be set up to increase the output power.

The output has to be adjusted approximately to the same value ($\pm$ 20mV) while applying a 1-2 A load to all devices before connecting them in parallel.
