General Description

The XC62H series are highly precise, low power consumption, positive voltage regulators, manufactured using CMOS and laser trimming technologies. The series consists of a high precision voltage reference, an error correction circuit, and an output driver with current limitation. By way of the CE function, with output turned off, the series enters stand-by. In the stand-by mode, power consumption is greatly reduced. SOT-25 (150mW) and SOT-89-5 (500mW) packages are available. In relation to the CE function, as well as the positive logic XC62HR series, a negative logic XC62HP series (custom) is also available.
