

Earth Leakage Detector

KA2803

Description

The KA2803 is designed for use in earth leakage circuit interrupters, for operation directly off the AC line in breakers. The input of the differential amplifier is connected to the secondary coil of Zero Current Transformer (ZCT). The amplified output of differential amplifier is integrated at external capacitor to gain adequate time delay. The level comparator generates a high level when earth leakage current is greater than the fixed level.

Features

- Low Power Consumption: 5 mW, 100 V/200 V
- Built-in Voltage Regulator
- High-gain Differential Amplifier
- 0.4 mA Output Current Pulse to Trigger SCRs
- Low External Part Count
- SOP Package, High Packing Density
- High Noise Immunity, Large Surge Margin
- Super Temperature Characteristic of Input Sensitivity
- Wide Operating Temperature Range:
 $T_A = -25^{\circ}\text{C}$ to $+80^{\circ}\text{C}$ for KA2803B and KA2803BDTF
 $T_A = -25^{\circ}\text{C}$ to $+100^{\circ}\text{C}$ for KA2803CDTF
- Operation from 12 V to 20 V Input

Functions

- Differential Amplifier
- Level Comparator
- Latch Circuit

KA2803

BLOCK DIAGRAM

Figure 1. Block Diagram

PIN CONFIGURATION

Figure 2. Pin Assignment

PIN DESCRIPTION

Pin No.	Name	Description
1	VR	Non inverting input for current sensing amplifier
2	VI	Inverting Input for current sensing amplifier
3	GND	Ground
4	OD	Output of current sensing amplifier
5	SC	Input of latch circuit
6	NR	Noise absorption
7	OS	Gate drive for external SCR
8	VCC	Power supply input for KA2803 circuitry

APPLICATION CIRCUITS

Figure 3. Full-wave Application Circuit

Figure 4. Half-wave Application Circuit

APPLICATION INFORMATION

(Refer to full-wave application circuit in Figure 3)

Figure 3 shows the KA2803 connected in a typical leakage current detector system. The power is applied to the V_{CC} terminal (Pin 8) directly from the power line. The resistor R_S and capacitor C_S are chosen so that Pin 8 voltage is at least 12 V. The value of C_S is recommended above 1 μ F.

If the leakage current is at the load, it is detected by the Zero Current Transformer (ZCT). The output voltage signal of ZCT is amplified by the differential amplifier of the KA2803 internal circuit and appears as a half-cycle sine wave signal referred to input signal at the output of the amplifier. The amplifier closed-loop gain is fixed about 1000 times with internal feedback resistor to compensate for Zero Current Transformer (ZCT) variations. The resistor R_L should be selected so that the breaker satisfies the required sensing current. The protection resistor R_P is not usually used when high current is injected at the breaker; this resistor should be used to protect the earth leakage detector IC

(KA2803). The range of R_P is from several hundred Ω to several k Ω .

Capacitor C_1 is for the noise canceller and a standard value of C_1 is 0.047 μ F. Capacitor C_2 is also a noise canceller capacitance, but it is not usually used.

When high noise is present, a 0.047 μ F capacitor may be connected between Pins 6 and 7. The amplified signal finally appears at the Pin 7 with pulse signal through the internal latch circuit of the KA2803. This signal drives the gate of the external SCR, which energizes the trip coil, which opens the circuit breaker. The trip time of the breaker is determined by capacitor C_3 and the mechanism breaker. This capacitor should be selected under 1 μ F to satisfy the required trip time. The full-wave bridge supplies power to the KA2803 during both the positive and negative half cycles of the line voltage. This allows the hot and neutral lines to be interchanged.

ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Min.	Max.	Unit
V _{CC}	Supply Voltage		20	V
I _{CC}	Supply Current		8	mA
P _D	Power Dissipation		300	mW
T _L	Lead Temperature, Soldering 10 Seconds		260	°C
T _A	Operation Temperature Range for KA2803B and KA2803BDTF	-25	80	°C
	Operation Temperature Range for KA2803CDTF	-25	+100	°C
T _{STG}	Storage Temperature Range	-65	+150	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

RECOMMENDED OPERATING CONDITIONS (For KA2803B and KA2803BDTF, T_A = -25°C to 80°C unless otherwise noted. For KA2803CDTF, T_A = -25°C to +100°C unless otherwise noted.)

Symbol	Parameter	Conditions	Test Circuit	Min.	Typ.	Max.	Units
I _{CC}	Supply Current 1	V _{CC} = 12V, V _R = OPEN, V _I = 2 V	Figure 5			580	μA
					300	400	
						480	
V _T	Trip Voltage	V _{CC} = 16 V, V _R = 2 V~2.02 V, V _I = 2 V	Figure 6	14	16	18	mV (rms)
I _{O(D)}	Differential Amplifier Current Current 1	V _{CC} = 16 V, V _R -V _I = 30 mV, V _{OD} = 1.2 V	Figure 8	-12	-20	-30	μA
	Differential Amplifier Current Current 2	V _{CC} = 16 V, V _{OD} = 0.8 V, V _R , V _I Short = V _P	Figure 9	17	27	37	
I _O	Output Current	V _{SC} = 1.4 V, V _{OS} = 0.8 V, V _{CC} = 16.0 V	Figure 10	200	400	800	μA
				200	400	800	
				100	300	600

CASE 626-05
ISSUE P

DATE 22 APR 2015

NOTES:

1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
2. CONTROLLING DIMENSION: INCHES.
3. DIMENSIONS A, A1 AND L ARE MEASURED WITH THE PACKAGE SEATED IN JEDEC SEATING PLANE GAUGE GS-3.
4. DIMENSIONS D, D1 AND E1 DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS. MOLD FLASH OR PROTRUSIONS ARE NOT TO EXCEED 0.10 INCH.
5. DIMENSION E IS MEASURED AT A POINT 0.015 BELOW DATUM PLANE H WITH THE LEADS CONSTRAINED PERPENDICULAR TO DATUM C.
6. DIMENSION eB IS MEASURED AT THE LEAD TIPS WITH THE LEADS UNCONSTRAINED.
7. DATUM PLANE H IS COINCIDENT WITH THE BOTTOM OF THE LEADS, WHERE THE LEADS EXIT THE BODY.
8. PACKAGE CONTOUR IS OPTIONAL (ROUNDED OR SQUARE CORNERS).
