

Solid State Relays Zero Switching Types RGS Solid State Relay 'E' connection

CARLO GAVAZZI

- 17.5mm width
- Rated Operational voltage: Up to 600Vrms
- Rated Operational current: Up to 90Arms
- Up to 6600A²s for I²t
- Control voltages: 3-32 VDC, 20-275 VAC (24-190VDC)
- Input connection: Screw terminal or pluggable spring
- Output connection: Screw clamp/screw terminal
- Design according to IEC/EN60947-4-2, IEC/EN60947-4-3, IEC/EN62314, UL508, CSA22.2 No. 14-10
- Integrated voltage transient protection with varistor
- RoHS compliant
- Short circuit rating: 100 kA
- VDE approval (pending)

Product Description

Aim of this solid state switching device is to switch heater loads and motor loads frequently. The range offers solutions up to 90AAC in 17.5mm width. Output connections are via a screw connection, having a captivated washer allowing for safe looping. Input connection is provided either via a screw

connection having a captivated washer or via a pluggable spring loaded input. Other options with integrated heatsink are available in RGC ranges.

Specifications are at a surrounding temperature of 25°C unless otherwise specified.

Note:

- Control input lines must be installed together to maintain products' susceptibility to Radio Frequency interference. Use of AC solid state relays may, according to the application and the load current, cause conducted radio interferences. Use of mains filters may be necessary for cases where the user must meet E.M.C requirements. The capacitor values given inside the filtering specification tables should be taken only as indications, the filter attenuation will depend on the final application. DC input type require surge suppression for full compliance to EN55011.
- Performance Criteria 1: No degradation of performance or loss of function is allowed when the product is operated as intended.
- Performance Criteria 2: During the test, degradation of performance or partial loss of function is allowed. However when the test is complete the product should return operating as intended by itself.
- Performance Criteria 3: Temporary loss of function is allowed, provided the function can be restored by manual operation of the controls.

Mounting Instructions

Thermal stress will reduce the lifetime of the SSR. Therefore it is necessary to select the appropriate heatsinks, taking into account the surrounding temperature, load current and the duty cycle.

A small amount of thermally conductive silicone paste must be applied to the back of the SSR. RGS should be mounted on the heatsink with two M5 screws. Gradually tighten each screw (alternating between the two) until both are tightened with a torque of 0.75Nm. For optimal results wait one hour to allow excess paste to be pressed out and then tighten both screws to their final mounting torque of 1.5Nm.

Short Circuit Protection

Protection Co-ordination, Type 1 vs Type 2:

Type 1 protection implies that after a short circuit, the device under test will no longer be in a functioning state. In type 2 co-ordination the device under test will still be functional after the short circuit. In both cases, however the short circuit has to be interrupted. The fuse between enclosure and supply shall not open. The door or cover of the enclosure shall not be blown open. There shall be no damage to conductors or terminals and the conductors shall not separate from terminals. There shall be no breakage or cracking of insulating bases to the extent that the integrity of the mounting of live parts is impaired. Discharge of parts or any risk of fire shall not occur.

The product variants listed in the table hereunder are suitable for use on a circuit capable of delivering not more than 100,000A rms Symmetrical Amperes, 600Volts maximum when protected by fuses. Tests at 100,000A were performed with Class J, fast acting; please refer to the table below for maximum allowed ampere rating of the fuse. Use fuses only.

Co-ordination type 1 (UL508)

Part no.	Max. size [A]	Class	Current [kA]	Voltage [VAC]
RGS..25	30	J	100	Max. 600
RGS..50 / 51	30	J	100	Max. 600
RGS..75 / 71	30	J	100	Max. 600
RGS..90 / 91	30	J	100	Max. 600

Note: For the RGS..50,51,75,71,90,91, the fuse rating are according to the motor rating as required by the UL standard.

Co-ordination type 2 (IEC EN 60947-4-2/ -4-3)

Part No.	Ferraz Shawmut		Siba		Current [kA]	Voltage [VAC]
	Max size [A]	Part number	Max size [A]	Part number		
RGS..25	32	6.9xx CP URD 22x58/32, (xx=00 or 21)	-	-	100	Max. 600
RGS..50	50	A70QS50-4	50	50 142 06.50	100	Max. 600
RGS..51	50	A70QS50-4	-	-	100	Max. 600
RGS..75	80	A70QS80-4	-	-	100	Max. 600
RGS..71/90/91	100	A70QS100-4	100	50 194 20.100	100	Max. 600

Thermal Specifications

	RGS..25	RGS..50	RGS..51	RGS..75	RGS..71,90,91
Max. junction temperature	125°C	125°C	125°C	125°C	125°C
Thermal resistance junction to case, R _{thjc}	< 0.47 K/W	< 0.32 K/W	< 0.32 K/W	< 0.23 K/W	< 0.22 K/W
Thermal resistance case to heatsink, R _{thcs}	< 0.25 K/W	< 0.17 K/W	< 0.17 K/W	< 0.17 K/W	< 0.14 K/W

Note: Thermal resistance case to heatsink values are applicable upon application of a fine layer of silicon based thermal paste HTS02S from Electrolube between SSR and heatsink.

Protection with Miniature Circuit Breakers

Solid State Relay type	Model no. for Z - type M. C. B. (rated current)	Model no. for B - type M. C. B. (rated current)	Wire cross sectional area [mm²]	Minimum length of Cu wire conductor [m] ⁴

4. between MCB and SSR Relay (including return path which goes back to the mains).

Note: A prospective current of 6kA and a 230/400V power supply system is assumed for the above suggested specifications. For cables with different cross section than those mentioned above please consult Carlo Gavazzi's Technical Support Group.
