

AN2101FH

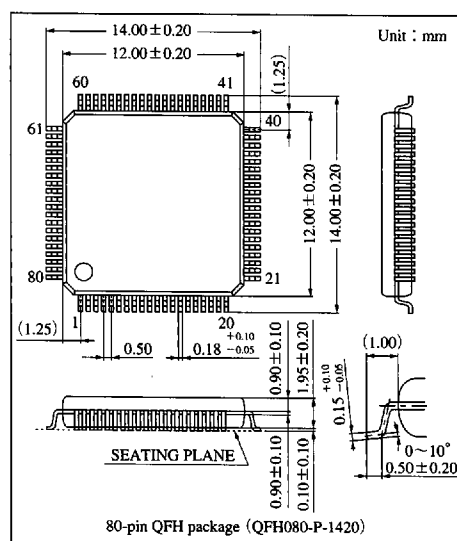

NTSC/PAL signal processor IC for 510H color CCD cameras

Overview

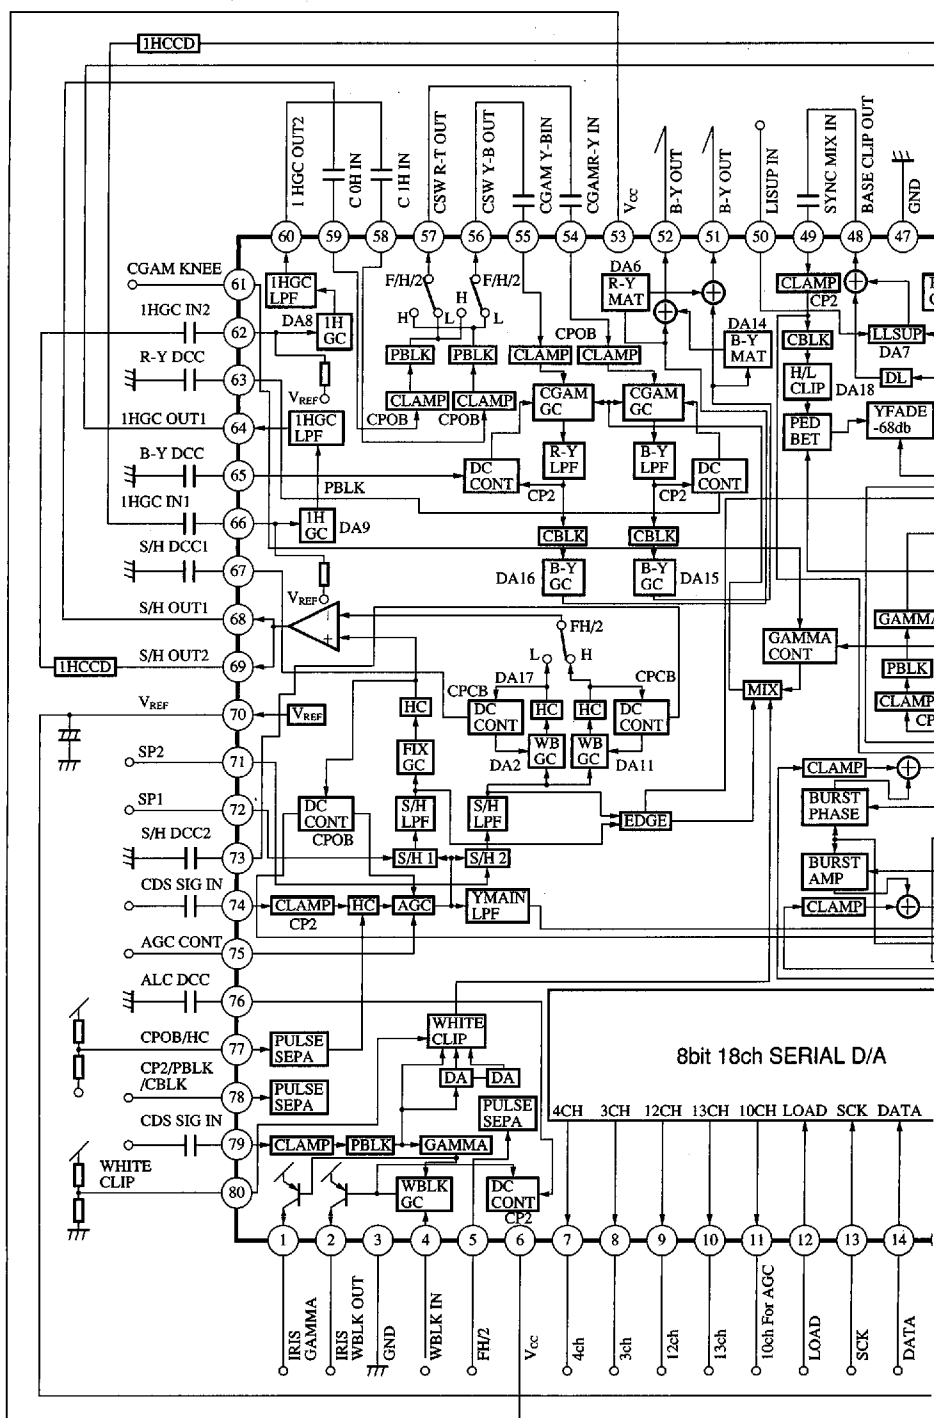

The AN2101FH is a CCD camera video signal processor IC featuring luminance and color-difference signal processing and encoding. A built-in DAC for adjustment eliminates the need of an external volume control.

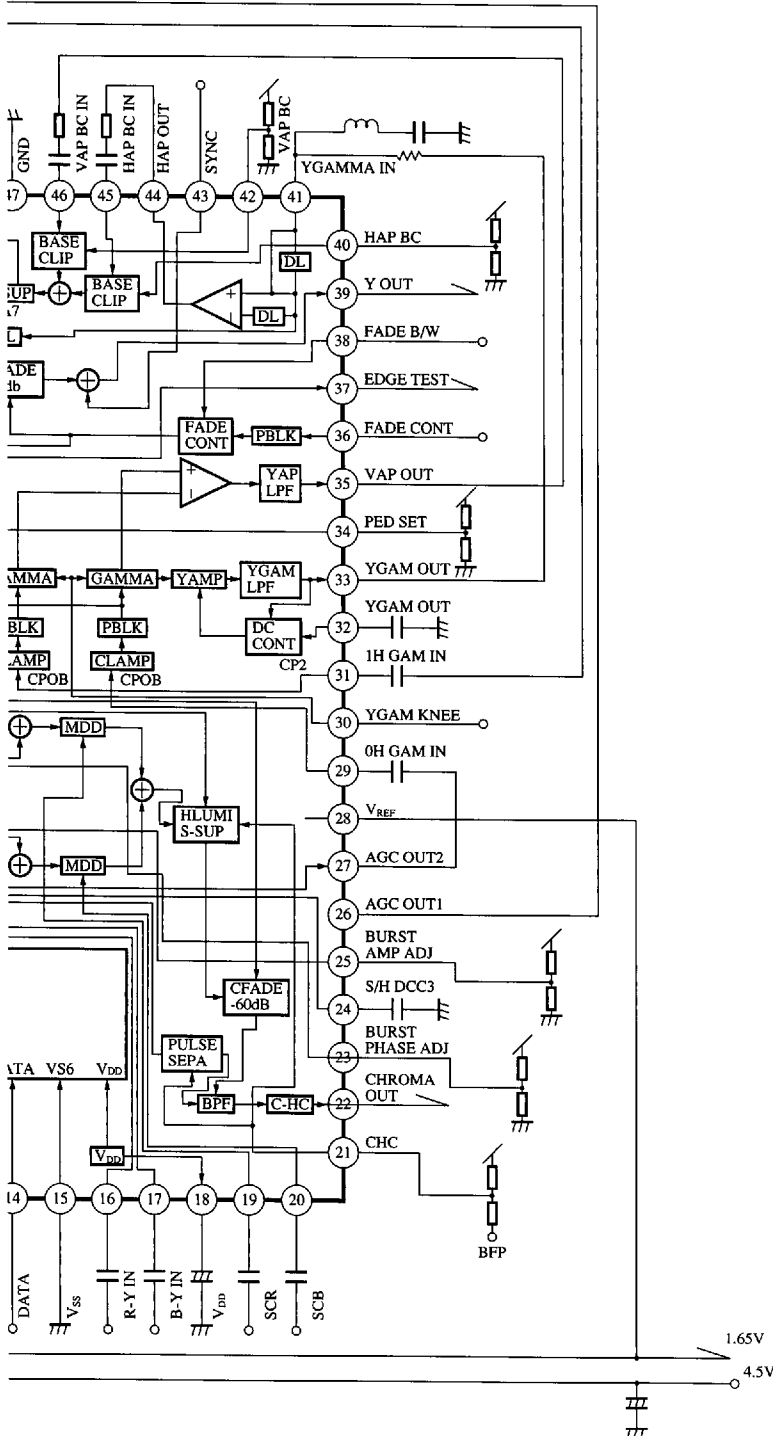

Features

- Supports 510H CCDs (250,000 pixels)
- Compatible with both NTSC and PAL
- Built-in adjustment DAC (8 bits, 16 channels)
