Description

LedEngin's LZ4-00CW15 White Power LedFlex™ emitter is capable of 15W power dissipation and provides exceptional luminous flux density. The LZ4-00CW15 offers ultimate design flexibility with separate electrical and thermal paths. The thermal contact can be mounted directly to a heatsink, eliminating the requirement for a MCPCB. The Anode and Cathode contacts are remotely located on the Flex PCB, allowing for connection versatility and unobstructed access to the optics. LedEngin's patent-pending thermally insulated phosphor layer provides for exceptional spatial color uniformity across the radiation pattern and a consistent CCT over time and temperature. The patent-pending design has unparalleled thermal and optical performance. The high quality materials used in the package are chosen to optimize light output and minimize stresses which results in monumental reliability and lumen maintenance.

IPC/JEDEC Moisture Sensitivity Level

Table 1 - IPC/JEDEC J-STD-20 MSL Classification:

Level	Floor Life		Soak Requirements			
	Time	Conditions	Standard		Accelerated	
			Time (hrs)	Conditions	Time (hrs)	Conditions
2	1 Year	$\leq 30^\circ\text{C}/$ 60% RH	168 +5/-0	$30^\circ\text{C}/$ 60% RH	n/a	n/a

Notes for Table 1:

1. The standard soak time is the sum of the default value of 24 hours for the semiconductor manufacturer's exposure time (MET) between bake and bag and the floor life of maximum time allowed out of the bag at the end user of distributor's facility.

Average Lumen Maintenance Projections

Lumen maintenance generally describes the ability of a lamp to retain its output over time. The useful lifetime for solid state lighting devices (Power LEDs) is also defined as Lumen Maintenance, with the percentage of the original light output remaining at a defined time period.

Based on long-term WHTOL testing, LedEngin projects that the LZ Series will deliver, on average, 90% Lumen Maintenance at 100,000 hours of operation at a forward current of 1000 mA. This projection is based on constant current operation with junction temperature maintained at or below 125°C .
